After paying our Identity-and-Access-Management-Architect exam torrent successfully, buyers will receive the mails sent by our system in 5-10 minutes. Then candidates can open the links to log in and use our Identity-and-Access-Management-Architect test torrent to learn immediately. Because the time is of paramount importance to the examinee, everyone hope they can learn efficiently. So candidates can use our Identity-and-Access-Management-Architect guide questions immediately after their purchase is the great advantage of our product. The language is easy to be understood makes any learners have no obstacles. The Identity-and-Access-Management-Architect Test Torrent is suitable for anybody no matter he or she is in-service staff or the student, the novice or the experience people who have worked for years. The software boosts varied self-learning and self-assessment functions to check the results of the learning.

Achieving the Salesforce Certified Identity and Access Management Architect certification is a significant accomplishment in the career of a Salesforce professional. Salesforce Certified Identity and Access Management Architect certification demonstrates that the candidate has the skills and knowledge required to design and implement secure and scalable identity and access management solutions for complex enterprise environments. It also helps professionals stand out in a competitive job market and opens up new career opportunities. By pursuing this certification, professionals can gain valuable skills and knowledge that can help them advance in their careers and make a meaningful impact in their organizations.

Salesforce Certified Identity and Access Management Architect exam is a proctored exam that consists of 60 multiple-choice questions. The test-taker has two hours to complete the exam and must score 63% or higher to pass. Identity-and-Access-Management-Architect Exam can be taken online or at a proctored testing center. The cost of the exam is \$400, and candidates can take the exam up to ten times in a year.

Latest Salesforce Identity-and-Access-Management-Architect Mock Exam | Identity-and-Access-Management-Architect Guaranteed Success

We guarantee that you can enjoy the premier certificate learning experience under our help with our Identity-and-Access-Management-Architect prep guide since we put a high value on the sustainable relationship with our customers. First of all we have fast delivery after your payment in 5-10 minutes, and we will transfer Identity-and-Access-Management-Architect guide torrent to you online, which mean that you are able to study as soon as possible to avoid a waste of time. Besides if you have any trouble coping with some technical and operational problems while using our Identity-and-Access-Management-Architect Exam Torrent, please contact us immediately and our 24 hours online services will spare no effort to help you solve the problem in no time. As a result what we can do is to create the most comfortable and reliable customer services of our Identity-and-Access-Management-

Architect guide torrent to make sure you can be well-prepared for the coming exams.

Salesforce Identity-and-Access-Management-Architect Exam is a valuable credential for IT professionals who specialize in IAM on the Salesforce platform. Salesforce Certified Identity and Access Management Architect certification validates a candidate's knowledge and expertise in designing, implementing, and managing secure and scalable IAM solutions. If you are an IT architect, administrator, or consultant looking to enhance your career in the field of IAM on the Salesforce platform, this certification is worth considering.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q95-Q100):

NEW QUESTION # 95

Universal Containers (UC) has decided to use Salesforce as an Identity Provider for multiple external applications. UC wants to use the Salesforce App Launcher to control the Apps that are available to individual users. Which three steps are required to make this happen?

- A. Add each connected App to the App Launcher with a Start URL.
- B. Create a Connected App for each external application.
- C. Set up an Auth Provider for each External Application.
- D. Set up Salesforce as a SAML Idp with My Domain.
- E. Set up Identity Connect to Synchronize user data.

Answer: A,B,D

Explanation:

Explanation

These are the steps required to enable Salesforce as a SAML Identity Provider and use the App Launcher to access external applications. According to the Salesforce documentation¹, you need to:

Enable Salesforce as a SAML Identity Provider with My Domain².

Create a Connected App for each external application that you want to integrate with Salesforce³.

Add each Connected App to the App Launcher with a Start URL that points to the external application¹.

Option B is incorrect because setting up an Auth Provider is not necessary for SAML SSO. Auth Providers are used for OAuth SSO, which is a different protocol⁴. Option D is incorrect because Identity Connect is a tool for synchronizing user data between Active Directory and Salesforce, which is not related to SSO or App Launcher⁵.

NEW QUESTION # 96

A company's external application is protected by Salesforce through OAuth. The identity architect for the project needs to limit the level of access to the data of the protected resource in a flexible way.

What should be done to improve security?

- A. Leverage external objects and data classification policies.
- B. Create custom scopes and assign to the connected app.
- C. Define a permission set that grants access to the app and assign to authorized users.
- D. Select "Admin approved users are pre-authorized" and assign specific profiles.

Answer: B

Explanation:

Explanation

To limit the level of access to the data of the protected resource in a flexible way, the identity architect should create custom scopes and assign them to the connected app. Custom scopes are permissions that define the specific data that an external application can access or modify in Salesforce. Custom scopes can be created using Apex or Metadata API and assigned to a connected app using OAuth 2.0 or SAML protocols. Custom scopes can provide more granular control over data access than standard scopes, which are predefined by Salesforce. References: Custom Scopes, Create and Assign Custom Scopes

NEW QUESTION # 97

Universal Containers (UC) has built a custom token-based Two-factor authentication (2FA) system for their existing on-premise applications. They are now implementing Salesforce and would like to enable a Two-factor login process for it, as well. What is the recommended solution as Architect should consider?

- A. Replace the custom 2FA system with an AppExchange App that supports on-premise application and Salesforce.
- B. Use Custom Login Flows to connect to the existing custom 2FA system for use in Salesforce.
- C. Use the custom 2FA system for on-premise applications and native 2FA for Salesforce.
- **D. Replace the custom 2FA system with Salesforce 2FA for on-premise applications and Salesforce.**

Answer: D

Explanation:

The recommended solution for UC to enable a two-factor login process for Salesforce and their existing on-premise applications is to replace the custom 2FA system with Salesforce 2FA for on-premise applications and Salesforce. Salesforce 2FA is a feature that requires users to verify their identity with a second factor, such as a verification code or a mobile app, after entering their username and password. Salesforce 2FA can be enabled for both Salesforce and on-premise applications by using one of the following methods:

- * Use Salesforce Authenticator, a mobile app that generates verification codes or sends push notifications to users' devices.
- * Use a third-party authenticator app, such as Google Authenticator or Microsoft Authenticator, that generates verification codes based on a shared secret key.
- * Use a verification code sent by email or SMS to users' registered email address or phone number.
- * Use a U2F security key, such as YubiKey, that plugs into users' devices and provides a physical token.

By replacing the custom 2FA system with Salesforce 2FA, UC can benefit from the following advantages:

- * Improved security and compliance by using a standard and proven 2FA solution that protects against phishing, credential theft, and brute force attacks.
- * Reduced complexity and cost by eliminating the need to maintain a custom 2FA system and integrating it with Salesforce.
- * Enhanced user experience and convenience by providing multiple options for verifying identity and allowing users to remember trusted devices or browsers.

The other options are not recommended solutions for this scenario. Using the custom 2FA system for on-premise applications and native 2FA for Salesforce would create inconsistency and confusion for users who have to use different methods of verification for different applications. Replacing the custom 2FA system with an AppExchange app that supports on-premise applications and Salesforce would require UC to find an app that meets their specific needs and pay for its license and maintenance. Using custom login flows to connect to the existing custom 2FA system for use in Salesforce would require UC to write custom code and logic to invoke the custom 2FA system from Salesforce, which could introduce security and performance issues.

NEW QUESTION # 98

Universal Containers (UC) have a custom, internal-only, mobile billing application for users who are commonly out of the office. The app is configured as a connected App in Salesforce. Due to the nature of this app, UC would like to take the appropriate measures to properly secure access to the app. Which two are recommendations to make the UC? Choose 2 answers

- A. Set login IP ranges to the internal network for all of the app users profiles.
- **B. Require high assurance sessions in order to use the connected App**
- **C. Use Google Authenticator as an additional part of the logical processes.**
- D. Disallow the use of single Sign-on for any users of the mobile app.

Answer: B,C

Explanation:

Explanation

High assurance sessions are sessions that require a stronger level of identity verification, such as two-factor authentication or SAML assertions¹. Google Authenticator is an app that generates verification codes on your mobile device that you can use as a second factor of authentication². These measures can help prevent unauthorized access to the connected app by ensuring that the user is who they claim to be and that they have access to their mobile device. Disallowing the use of single sign-on (SSO) for the mobile app is not a recommendation because SSO can provide a seamless and secure user experience across multiple applications³.

Setting login IP ranges to the internal network for the app users profiles is not a recommendation because it can limit the mobility and flexibility of the users who are commonly out of the office. References: 1: Session Security Levels 2: Google Authenticator 3:

Connected Apps : [Restrict Login Access by IP Address]

NEW QUESTION # 99

Which three are features of federated Single sign-on solutions? Choose 3 Answers

- A. It enables quick and easy provisioning and deactivating of users.
- B. It establishes trust between Identity Store and Service Provider.
- C. It improves affiliated applications adoption rates.
- D. It federates credentials control to authorized applications.
- E. It solves all identity and access management problems.

Answer: A,B,C
