質問 # 60

You are designing an automation that adds new customers to an online insurance web site. If a customer exists, a pop-up window is displayed with an error message, which closes automatically after 35 seconds.

While debugging the automation, you notice that you are receiving a control not created exception message in the Add Customer procedure after a page navigation occurs.

How do you resolve the exception?

- A. Add a missing created event in the Add Customer procedure.
- B. Ensure the waitForCreate timeout is longer than 35 seconds in the Add Customer procedure.
- C. Ensure the isCreated timeout is longer than 35 seconds in the Add Customer procedure.
- D. Add a missing waitForEvent.Exists method in the Add Customer procedure.

正解: D

質問 # 61

Pega Robot Studio provides five rules on how to differentiate between cloneable application objects when using key assignments in automations. The first rule states that an event creates the instance to set the context of a cloneable object. The remaining four rules state the requirements for a key assignment.

In the Answer Area, determine if each rule description requires a key assignment.

Rule Description	Key Assignment Required?
An event from Child Context to Parent Context	Requires a key assignment Does not require a key assignment
An event from Parent Context to Child Context	Requires a key assignment Does not require a key assignment
Logic within the same context	Requires a key assignment Does not require a key assignment
An event from No Context to a Context	Requires a key assignment Does not require a key assignment
