## Valid UiPath-SAIAv1 Test Questions - UiPath-SAIAv1 Valid Exam Practice

The UiPath-SAIAv1 practice test pdf contains the most updated and verified questions & answers, which cover all the exam topics and course outline completely. The UiPath-SAIAv1 vce dumps can simulate the actual test environment, which can help you to be more familiar about the UiPath-SAIAv1 Real Exam. Now, you can free download UiPath-SAIAv1 updated demo and have a try. If you have any questions about UiPath-SAIAv1 pass-guaranteed dumps, contact us at any time.

## UiPath Specialized AI Associate Exam (2023.10) Sample Questions (Q223-Q228):

### NEW QUESTION # 223

What fields are available when creating an AI Center project?

- A. Name and description.
- B. Name, description, and permissions.

- C. Name, description, and labels.
- D. Name and labels.

**Answer: A**

Explanation:

When creating an AI Center project in UiPath, the fields available to input are the project's name and description. These fields allow you to clearly label and describe the purpose of the AI project within the UiPath platform. Permissions and labels can be managed separately after the project is created.

**NEW QUESTION # 224**

What should a UiPath Communications Mining taxonomy contain when it is being imported?

- A. Label descriptions.
- B. Entity predictions.
- C. Label predictions.
- D. Entity descriptions.

**Answer: A**

Explanation:

According to the UiPath documentation, a UiPath Communications Mining taxonomy is a collection of all the labels applied to the verbatims in a dataset, structured in a hierarchical manner. Labels are the concepts and intents that you want to capture in the dataset to suit your specific objectives. When you import your taxonomy from a spreadsheet, you need to provide the label descriptions, which are the names of the labels and their level in the hierarchy. Label predictions and entity predictions are the outputs of the model training process, and they are not part of the taxonomy. Entity descriptions are the definitions of the entities that you want to extract from the verbatims, and they are not part of the taxonomy either.

**NEW QUESTION # 225**

What is the difference between OCR (Optical Character Recognition) and IntelligentOCR?

- A. OCR (Optical Character Recognition) is a UiPath Studio activity package that contains IntelligentOCR as an activity used to read text from images, recognizing each character and its position. OCR is widely used in Document Understanding processes.
- B. OCR (Optical Character Recognition) is a method that reads text from images, recognizing each character and its position, while IntelligentOCR is an enhanced version of it that can also work with noisier input data.
- C. IntelligentOCR is a UiPath Studio activity package that contains all the activities needed to enable information extraction, while OCR (Optical Character Recognition) is a method that reads text from images, recognizing each character and its position.
- D. IntelligentOCR is simply a rebranding of the OCR (Optical Character Recognition), both of them being methods that read text from images, recognizing each character and its position.

**Answer: C**

Explanation:

According to the UiPath documentation and web search results, OCR (Optical Character Recognition) is a method that reads text from images, recognizing each character and its position. OCR is used to digitize documents and make them searchable and editable. OCR can be performed by different engines, such as Tesseract, Microsoft OCR, Microsoft Azure OCR, OmniPage, and Abbyy. OCR is a basic step in the Document Understanding Framework, which is a set of activities and services that enable the automation of document processing workflows.

IntelligentOCR is a UiPath Studio activity package that contains all the activities needed to enable information extraction from documents. Information extraction is the process of identifying and extracting relevant data from documents, such as fields, tables, entities, and labels. IntelligentOCR uses different components, such as classifiers, extractors, validators, and trainers, to perform information extraction.

IntelligentOCR also supports different formats, such as PDF, PNG, JPG, TIFF, and BMP. IntelligentOCR is an advanced step in

the Document Understanding Framework, which builds on the OCR output and provides more functionality and flexibility.

#### NEW QUESTION # 226

Which of the following OCR (Optical Character Recognition) engines is not free of charge?

- A. OmniPage.
- B. Tesseract.
- C. Microsoft Azure OCR.
- D. Microsoft OCR.

Answer: A

Explanation:

According to the UiPath documentation, OmniPage is a paid OCR engine that requires a license to use. It is one of the most accurate and reliable OCR engines available, and it supports over 200 languages. The other OCR engines listed are free of charge, but they may have different features, limitations, and performance levels. For example, Tesseract is an open-source OCR engine that supports over 100 languages, but it may not be as accurate as OmniPage. Microsoft Azure OCR and Microsoft OCR are both cloud-based OCR engines that use Microsoft's technology, but they have different capabilities and pricing models. Microsoft Azure OCR can process both printed and handwritten text, and it uses a pay-as-you-go model based on the number of transactions. Microsoft OCR can only process printed text, and it is included in the UiPath Studio license.
