

ITIL-4-Practitioner-Release-Management 100% Exam Coverage, ITIL-4-Practitioner-Release-Management Reliable Exam Vce

P.S. Free & New ITIL-4-Practitioner-Release-Management dumps are available on Google Drive shared by PDFDumps:
<https://drive.google.com/open?id=1caFFLzK2rRaGlXhV1btRkU38T0S2AYn3>

With our customizable learning experience and self-assessment features of practice exam software for ITIL-4-Practitioner-Release-Management exam, you will be able to know your strengths and areas of improvement. We provide authentic braindumps for ITIL-4-Practitioner-Release-Management certification exam. In fact, we guarantee that you will pass the ITIL-4-Practitioner-Release-Management Certification Exam on your very first try. If we fail to deliver this promise, we will give your money back! Aside from providing you with the most reliable dumps for ITIL-4-Practitioner-Release-Management, we also offer our friendly customer support staff. They will be with you every step of the way.

As we all know, no pain, no gain. If you want to enter a better company, you must have the competitive force. ITIL-4-Practitioner-Release-Management learning materials will offer you such opportunity to pass the exam and get the certificate successfully, so that you can improve your competitive force. Also, you need to spend certain time on practicing the ITIL-4-Practitioner-Release-Management Exam Dumps, so that you can get the certificate at last. Besides, we pass guarantee and money back guarantee if you fail to pass the exam after buying ITIL-4-Practitioner-Release-Management learning materials. We also offer you free update for one year, and the update version will be sent to your email automatically.

ITIL-4-Practitioner-Release-Management Reliable Exam Vce | ITIL-4-Practitioner-Release-Management Latest Dumps Questions

If you are already an employee or busy in your routine, you can prepare ITIL 4 Practitioner: Release Management Exam (ITIL-4-Practitioner-Release-Management) exam quickly with PDFDumps pdf questions. ITIL-4-Practitioner-Release-Management pdf exam questions help applicants study for the ITIL 4 Practitioner: Release Management Exam (ITIL-4-Practitioner-Release-Management) exam at any time from any location. With the pdf questions, it will be easy for you to complete the ITIL 4 Practitioner: Release Management Exam (ITIL-4-Practitioner-Release-Management) exam preparation in a short time.

Peoplecert ITIL-4-Practitioner-Release-Management Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Change: This section of the exam measures the skills of DevOps Engineers and focuses on how to manage and control changes within IT environments. It includes planning, executing, monitoring, and communicating changes to ensure minimal disruption while keeping stakeholders informed about the progress and impact of changes.
Topic 2	<ul style="list-style-type: none">• AI and Automation: This section of the exam measures the skills of IT Operations Managers and addresses the use of AI and automation in delivering IT systems and applications that align with user needs. It ensures that software releases meet quality standards, are delivered on time, and stay within budget, using modern tools and intelligent technologies.
Topic 3	<ul style="list-style-type: none">• Service Design: This section of the exam measures the skills of IT Release Managers and covers the principles and practices involved in designing services and products that are practical, useful, and aligned with stakeholder expectations. It focuses on ensuring that services are designed in a way that they can be effectively delivered and supported by the organization and its partners.

Peoplecert ITIL 4 Practitioner: Release Management Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

What is a description of a release?

- A. The repeated building and testing of code leading to deployment
- B. The guidelines for collating two or more changes
- C. All updated service versions that are mandatory for users
- D. A set of new service features that will benefit users

Answer: D

Explanation:

In ITIL 4, a release is defined as the output of the release management practice that is made available to users.

The ITIL 4 Practitioner: Release Management document states: "A release is a version of a service or a set of service components that is made available for use. It often includes new or changed features that deliver value to users" (Section 2.2).

* Option A (A set of new service features that will benefit users) aligns with the definition, as a release typically includes new or changed features intended to provide value to users.

* Option B (The repeated building and testing of code) describes a development process (e.g., continuous integration), not the release itself.

* Option C (All updated service versions that are mandatory for users) is incorrect because releases are not always mandatory; ITIL 4 allows for push or pull approaches.

* Option D (Guidelines for collating changes) describes a process or policy, not the release itself.

The correct description of a release is a set of features or components made available for use, making A the correct answer.

NEW QUESTION # 14

A release manager is considering the involvement of third parties in the release management practice. Which release management activity is likely to have a dependency on third parties?

- A. Performing a release according to an agreed model
- B. Release management alignment with other practices
- C. Identifying an applicable model for a release instance
- D. Verifying a release according to the release plan

Answer: A

Explanation:

Third parties, such as suppliers or vendors, often play a role in the execution of releases, especially when they provide components

or services involved in the release. The ITIL 4 Practitioner: Release Management document states: "Performing a release according to an agreed model often involves dependencies on third parties, such as suppliers providing software updates, infrastructure, or support services, which need to be integrated during the release execution" (Section 3.4).

* Option A (Release management alignment with other practices) is an internal coordination activity, less likely to directly involve third parties.

* Option B (Identifying an applicable model) is a planning activity typically handled internally by the release manager.

* Option C (Performing a release according to an agreed model) directly involves executing the release, which often requires third-party components or services, creating a dependency.

* Option D (Verifying a release) may involve third-party tools but is less dependent on their active participation compared to execution.

The correct answer is C, as performing the release is the activity most likely to depend on third parties.

NEW QUESTION # 15

A release manager has noticed that the organization has many standardized services provided to international organizations. Which aspect of release management will this situation directly affect?

- A. The release plans
- B. Continuous delivery
- C. Continuous integration
- **D. The release models**

Answer: D

Explanation:

Standardized services provided to international organizations imply a need for consistency and scalability in how releases are managed across diverse contexts. The ITIL 4 Practitioner: Release Management document explains that release models are used to standardize the approach to releases: "Release models define the structure, contents, and schedule of releases... They ensure consistent and repeatable processes, which is particularly important for organizations with standardized services" (Section 3.2.2).

* Option A (The release plans) refers to specific plans for individual releases, which may be affected indirectly but are not the primary aspect impacted by standardization needs.

* Option B (Continuous integration) and Option C (Continuous delivery) are development practices that may interact with release management but are not directly affected by the need for standardization across international services.

* Option D (The release models) is directly affected, as standardized services require well-defined release models to ensure consistency, repeatability, and scalability across international contexts.

The situation directly impacts the design and application of release models to accommodate standardized services globally. Thus, the correct answer is D.

NEW QUESTION # 16

A release manager has decided on a policy of not allowing users to choose to accept software updates. What is this an example of?

- A. Continuous delivery
- B. Continuous integration
- C. A 'pull' approach
- **D. A 'push' approach**

Answer: D

Explanation:

The ITIL 4 Practitioner: Release Management document explains the difference between push and pull approaches in release management: "In a push approach, updates are deployed to users without giving them a choice, often to ensure compliance or security. In a pull approach, users can choose when to adopt updates" (Section 3.2.3).

* Option A (A 'pull' approach) is incorrect because a pull approach allows users to choose when to accept updates, which contradicts the scenario.

* Option B (A 'push' approach) is correct, as the policy of not allowing users to choose means the updates are automatically deployed to them, fitting the definition of a push approach.

* Option C (Continuous delivery) and Option D (Continuous integration) are development practices, not release deployment strategies. Continuous delivery involves making releases available frequently, but it doesn't specify whether users must accept them (push) or can choose (pull).

The scenario describes a push approach, making B the correct answer.

NEW QUESTION # 17

Which activity of the 'release model development and improvement' process is used to standardize the preparation of release instances?

- A. Release management approach review and development
- B. Release execution
- C. Product architecture and service relationship analysis
- **D. Release model review and development**

Answer: D

Explanation:

The release model development and improvement process aims to create and refine standardized models for releases. The ITIL 4 Practitioner: Release Management document explains: "Release model review and development involves defining and standardizing the structure, contents, and schedule of releases to ensure consistency in the preparation of release instances" (Section 3.2.2).

* Option A (Release management approach review and development) focuses on the overall practice approach, not specifically the preparation of release instances.

* Option B (Release model review and development) directly addresses standardizing the preparation of release instances by defining repeatable models.

* Option C (Product architecture and service relationship analysis) is a supporting activity to understand dependencies, not to standardize release preparation.

* Option D (Release execution) is the process of deploying a release, not developing or standardizing models.

The correct answer is B, as it directly relates to standardizing release preparation through model development.

NEW QUESTION # 18

.....

The objective of ITIL-4-Practitioner-Release-Management is to assist candidates in preparing for the ITIL 4 Practitioner: Release Management Exam (ITIL-4-Practitioner-Release-Management) certification test by equipping them with the actual Peoplecert ITIL-4-Practitioner-Release-Management questions PDF and ITIL-4-Practitioner-Release-Management practice exams to attempt the prepare for your ITIL-4-Practitioner-Release-Management Exam successfully. The ITIL 4 Practitioner: Release Management Exam (ITIL-4-Practitioner-Release-Management) practice material comes in three formats, desktop ITIL-4-Practitioner-Release-Management practice test software, web-based ITIL-4-Practitioner-Release-Management practice exam, and ITIL-4-Practitioner-Release-Management Dumps PDF that cover all exam topics.
