## Ping Identity PAP-001 Exam Overview - First-Grade PAP-001 Latest Version and Pass-Sure New Certified Professional - PingAccess Braindumps Ebook

Although it is not an easy thing for some candidates to pass the exam, but our PAP-001 question torrent can help aggressive people to achieve their goals. This is the reason why we need to recognize the importance of getting the test PAP-001 certification. If you have any doubt about our products that will bring a lot of benefits for you. The trial demo of our PAP-001 question torrent must be a good choice for you. By the trial demo provided by our company, you will have the opportunity to closely contact with our PAP-001 exam torrent, and it will be possible for you to have a view of our products.

## Ping Identity Certified Professional - PingAccess Sample Questions (Q61-Q66):

### NEW QUESTION # 61

Where should an administrator adjust SameSite Cookies settings?

- A. Rules
- B. Applications
- C. Sites
- D. Web Sessions

Answer: D

Explanation:

The `SameSite` attribute is applied to session cookies to control cross-site behavior. In PingAccess, session cookie configuration (including `SameSite`) is defined at the Web Session level.

Exact Extract:

"Web session configuration includes cookie attributes such as name, domain, secure flag, `HTTPOnly`, and `SameSite`."

- \* Option A (Rules) is incorrect - rules govern access control, not cookies.
- \* Option B (Sites) defines backend connections, not session cookies.
- \* Option C (Applications) ties resources to sessions but does not define cookie behavior.
- \* Option D (Web Sessions) is correct - session cookie `SameSite` settings are configured here.

### NEW QUESTION # 62

An organization wants to take advantage of a new product feature that requires upgrading the PingAccess cluster from 7.3 to the current version. The administrator downloads the required files and places the files on the PingAccess servers. What should the administrator do next?

- A. Disable cluster communication.
- B. Disable Key Rolling.
- C. Upgrade the Admin Console.
- D. Upgrade the Replica Admin.

Answer: C

### NEW QUESTION # 63

Anycompany has several applications that need to load images and fonts from `www.anycompany.com`. Users are currently getting CORS errors. How should the Cross-Origin Request rule be set to allow secure access?

- A. Allowed Origins to `*.anycompany.com` and disable the Allow Credentials option
- B. Allowed Origins to `*` and enable the Allow Credentials option
- C. Allowed Origins value for each of the listed domains
- D. Allowed Origins to `www.anycompany.com` and enable the Allow Credentials option

Answer: D

Explanation:

To prevent CORS errors, administrators must configure a Cross-Origin Request (CORS) Processing Rule.

The secure practice is to allow the specific trusted domain (`www.anycompany.com`) and, when cookies or credentials are required, to enable `Allow Credentials`.

Exact Extract:

"For secure CORS, specify exact origins rather than wildcards. Enable 'Allow Credentials' when client-side resources must include cookies or authentication data."

- \* Option A is incomplete - multiple values are possible, but in this case only `www.anycompany.com` is required.
- \* Option B is less secure - using a wildcard (`*.anycompany.com`) broadens exposure unnecessarily.
- \* Option C is insecure - `*` with credentials is disallowed by CORS specifications.
- \* Option D is correct - restricts access to the trusted domain and allows credentialed requests.

Reference: PingAccess Administration Guide - Cross-Origin Request Rule

### NEW QUESTION # 64

How many administrators are supported using HTTP Basic Authentication in the Administrative Console?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: C

Explanation:

When using HTTP Basic Authentication (admin.auth=native), PingAccess only supports a single administrative account (the default admin user). For multiple administrators, SSO integration (e.g., OIDC) is required.

Exact Extract:

"When admin authentication is set to native (HTTP Basic), only one administrative user is supported. For multiple admins, configure UI authentication with an OIDC provider."

\* Option A (1000) is incorrect.

\* Option B (1) is correct - only one basic auth admin account.

\* Option C (10) and Option D (100) are incorrect.

Reference: PingAccess Administration Guide - Admin Authentication

### NEW QUESTION # 65

What is the purpose of the admin.auth configuration setting?

- A. To configure SSO for the administrative user interface.
- B. To define the method to use for authenticating to the administrative API.
- **C. To override the SSO configuration for the administrative user interface.**
- D. To enable automatic authentication to the PingAccess administrative console.

**Answer: C**

Explanation:

The admin.auth setting in the run.properties file is used to specify a fallback authentication method for the administrative console.

Exact Extract from official documentation:

"To define a fallback administrator authentication method if the OIDC token provider is unreachable, enable the admin.auth=native property in the run.properties file. This overrides any configured administrative authentication to basic authentication." This makes it clear that the purpose of admin.auth is to override any configured SSO for the admin UI and enforce native (basic) authentication instead.

\* Option A is incorrect because the admin.auth setting does not configure SSO. SSO for the admin UI is configured separately.

\* Option B is incorrect because this setting does not apply to the administrative API; it specifically applies to the admin UI console.

\* Option C is correct because it directly reflects the documented behavior: admin.auth overrides SSO configuration for the administrative UI and enables native authentication.

\* Option D is incorrect because the setting does not enable automatic authentication. It still requires credentials, but falls back to basic auth.
