Plat-Dev-301 Real Dumps - Plat-Dev-301 Free Sample

As you know the registration fee for the Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) certification exam is itself very high, varying between 100\$ and 1000\$. And after paying the registration fee for better preparation a candidate needs budget-friendly and reliable Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) pdf questions. That is why TorrentExam has compiled the most reliable updated Salesforce Plat-Dev-301 Exam Questions with up to 1 year of free updates. The Salesforce Plat-Dev-301 practice test can be used right after being bought by the customer and they can avail of the benefits given in the Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) pdf questions.

Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q200-Q205):

NEW QUESTION # 200

What is the best practice to initialize a Visualforce page in a test class?

- A. Use `Test.setCurrentPage(MyTestPage);`
- B. Use `Test.currentPage.getParamaters put(MyTestPage);`
- **C. Use `Test.setCurrentPage(Page.MyTestPage);`**
- D. Use `controller.currentPage.setPage(MyTestPage);`

Answer: C

Explanation:

`Test.setCurrentPage(Page.MyTestPage)` is used to set the context to a Visualforce page in tests, allowing you to simulate a page request in a test method.

NEW QUESTION # 201

Which code snippet processes records in the most memory efficient manner, avoiding governor limits such as "Apex heap size too large"?

- A)
- B) C)
- D)

- A. Option C
- **B. Option D**
- C. Option A
- D. Option B

Answer: B

Explanation:

Option D, which uses the Database.query() method in combination with a for loop, is the most memory-efficient way to process records. This is known as the Query Locator pattern, which allows you to work with a large number of records by querying them in batches. This approach helps to avoid hitting the governor limit for "Apex heap size too large" as it processes one record at a time from the database without storing the entire result set in memory.

Working with Very Large SOQL Queries

Apex Governor Limits

NEW QUESTION # 202

Universal Containers has an Apex trigger on Account that creates an Account Plan record when an Account is marked as a Customer.

Recently a record-triggered flow was added so that whenever an Account is marked as a Customer, a 'Customer Since' date field is updated with today's date. Since the addition of the flow, two Account Plan records are created whenever the Account is marked as a Customer.

What might cause this to happen?

- A. The flow is configured to evaluate when a record is created and every time it is edited.
- B. The Apex trigger is not bulk safe and calls insert inside of a for loop.
- **C. The flow is configured to use an "Update Records" element.**
- D. The Apex trigger does not use a static variable to ensure it only fires once.

Answer: C

Explanation:

If a flow is configured to evaluate when a record is created and every time it's edited, and an Apex trigger also fires upon the same conditions, it could result in duplicate operations. In this case, two Account Plan records are created because both the flow and the trigger execute upon the Account being marked as a Customer.

NEW QUESTION # 203

A developer is writing code that requires making callouts to an external web service.

Which scenario necessitates that the callout be made in an asynchronous method?

- A. Over 10 callouts will be made in a single transaction.
- B. The callout could take longer than 60 seconds to complete.
- C. The callouts will be made using the REST API.
- **D. The callouts will be made in an Apex trigger.**

Answer: D

Explanation:

Callouts cannot be made from a synchronous context such as an Apex trigger because they might exceed the maximum execution time, leading to timeouts. Asynchronous methods, such as future or Queueable, are required to handle callouts from triggers.

NEW QUESTION # 204

A developer creates an application event that has triggered an infinite loop. What may have caused this problem?

- A. The event is fired from a custom renderer.
- B. An event is fired 'ontouchend" and is unhandled.
- C. The event handler calls a trigger.
- D. The event has multiple handlers registered in the project.

Answer: D

Explanation:

The infinite loop in the application event could be caused by multiple handlers registered in the project. If the event is fired and then handled in such a way that the handling leads to the event being fired again, this can create a loop. Care must be taken to ensure that the handling of the event does not re-trigger the same event unintentionally.

NEW QUESTION # 205

.....

It is heartening to announce that all TorrentExam users will be allowed to capitalize on a free Salesforce Plat-Dev-301 exam questions demo of all three formats of the Salesforce Plat-Dev-301 practice test. It will make them scrutinize how our formats work and what we offer them, for example, the form and pattern of Salesforce Plat-Dev-301 Exam Dumps, and their relevant and updated answers. It is convenient for our consumers to check TorrentExam Salesforce Plat-Dev-301 exam questions free of charge before purchasing the Salesforce Certified Platform Developer II - Multiple Choice practice exam.
