We offer free demos as your experimental tryout before downloading our Real CIS-PA Exam Questions. For more textual content about practicing exam questions, you can download our products with reasonable prices and get your practice begin within 5 minutes.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q57-Q62):

NEW QUESTION # 57

How many queries are performed against the database when aDaily Data Collection job is executed?

- A. One for each indicator frequency
- **B. One for each indicator source**
- C. One for each indicator type
- D. One for each automated indicator

Answer: B

Explanation:

During a Daily Data Collection job, Platform Analytics executes one database query per Indicator Source, not per indicator. Multiple indicators can reference the same indicator source, allowing the platform to reuse the result set and calculate multiple scores from a single query.

This design is a key performance optimization in Platform Analytics. Executing queries per indicator would significantly increase database load, especially in large implementations. ServiceNow documentation explicitly states that indicator sources are the unit of data retrieval during collection, making option B the correct and documented answer.

NEW QUESTION # 58

When sharing a Dashboard, who can be granted Dashboard access?

- A. A specific role
- B. A specific group
- **C. A specific user, group, or role**
- D. A specific user

Answer: C

Explanation:

In Platform Analytics, dashboards are shared through the dashboardShare action. In the Share Dashboard dialog, the Grant access to field explicitly allows you to enter one or more users, groups, or roles to share the dashboard with. This sharing controls whether recipients can view the dashboard or edit it, depending on whether you add them as a viewer or editor. Sharing can also optionally allow recipients to manage (add/edit/remove) sharing permissions if that option is enabled. ServiceNow further notes that only certain privileged roles (such as admin, dashboard_admin, pa_admin, or pa_power_user) can see roles in the sharing panel in some configurations, and sharing with roles may require read access to the Roles [sys_user_role] table. This means access can be granted at the individual level (user), team level (group), or permission level (role), making "user, group, or role" the correct and complete choice.

NEW QUESTION # 59

What is the default aggregation for the Metric tile in a Data Visualization?

- A. AVERAGE
- **B. COUNT**
- C. MIN
- D. SUM

Answer: B

Explanation:

In Platform Analytics data visualizations, the Metric tile is designed to display a single summarized value. By default, the aggregation used for a Metric tile is COUNT. This means the tile displays the total number of records or scores returned by the data source unless the aggregation is explicitly changed by the user.

COUNT is the most commonly used aggregation because Metric tiles are often used to show key headline numbers such as total incidents, open requests, or completed tasks. Other aggregations like AVERAGE, MIN, or SUM are available options, but they must be manually selected during configuration. ServiceNow documentation confirms that COUNT is the default aggregation applied to Metric visualizations, making option A the correct answer.

NEW QUESTION # 60

Who is the In-Line Dashboard Editor intended for?

- A. External contractors

- B. System administrators
- C. Business users
- D. Developers

Answer: C

Explanation:

The In-Line Dashboard Editor is designed primarily for business users who need to make quick, simple adjustments to dashboards without deep technical knowledge. It allows users to edit layouts, move widgets, and make basic configuration changes directly from the dashboard view.

System administrators and developers typically use the full dashboard configuration interfaces for advanced customization, scripting, or governance. External contractors are not a defined target audience for this feature.

ServiceNow documentation emphasizes that the in-line editor empowers non-technical users to personalize dashboards safely and efficiently, making option A the correct answer.

NEW QUESTION # 61

Which application helps to obtain insights on new and returning platform users and their navigation patterns?

- A. Responsive Dashboards
- B. Next Experience Dashboards
- C. User Experience Analytics
- D. Platform Analytics Workspace

Answer: C

Explanation:

User Experience Analytics is the application designed to analyze user behavior, including new versus returning users, session frequency, navigation paths, page views, and interaction patterns across the ServiceNow platform. It provides insights into how users engage with the platform and helps organizations optimize usability, adoption, and performance.

Responsive Dashboards and Next Experience Dashboards are visualization and UI frameworks, not behavioral analytics tools.

Platform Analytics Workspace focuses on KPI monitoring and process performance, not clickstream or navigation behavior.

ServiceNow documentation clearly positions User Experience Analytics as the solution for understanding how users interact with the platform, making option D the correct answer.

NEW QUESTION # 62

.....

On the other hand, those who do not score well can again try reading all the Certified Implementation Specialist - Platform Analytics (CIS-PA) dumps questions and then give the CIS-PA exam. This will help them polish their skills and clear all their doubts. Also, you must note down your Certified Implementation Specialist - Platform Analytics (CIS-PA) practice test score every time you try the ServiceNow Exam Questions. It will help you keep a record of your study and how well you are doing in them.
