The 3 different ISTQB ISTQB-CTAL-TA exam preparation formats are listed below

Don't waste much more time on preparing for a test. Hurry to purchase ActualTorrent ISTQB ISTQB-CTAL-TA certification training dumps. With the exam dumps, you will know how to effectively prepare for your exam. This is precious tool that can let you sail through ISTQB-CTAL-TA test with no mistakes. Missing the chance, I am sure you must regret it. Thus, don't hesitate and act quickly.

ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) or ISTQB CTAL-TA certification is an advanced level certification offered by the International Software Testing Qualifications Board (ISTQB). It is designed for individuals who want to demonstrate their expertise in software testing and analysis. (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) certification is recognized globally and provides a competitive edge to the candidates in the job market.

ISTQB (ISTQB CTAL-TA) ISTQB Certified Tester Advanced Level - Test Analyst (Syllabus 2012) Sample Questions (Q56-Q61):

NEW QUESTION # 56

Which pair of statements correctly describes when functional completeness, functional correctness, and /or functional appropriateness are undertaken?

SELECT ONE OPTION

- A. Functional completeness for system integration may focus on high-level business cases; functional appropriateness is usually performed prior to system testing
- B. Functional appropriateness testing is usually undertaken during system testing (but also during the later stages of integration testing); functional correctness testing can be conducted at any test level
- C. Functional completeness is performed as the last stage of testing; Functional correctness can be undertaken at any test level and often uses the specification or legacy system as a test oracle
- D. Functional correctness testing is only performed at the system test level; functional completeness is performed at the system integration testing stage

Answer: B

Explanation:

Comprehensive and Detailed in Depth Explanation:

* Functional appropriateness testing is often done during system testing because it evaluates whether the implemented functions meet user needs, but it can also be part of integration testing when assessing integrated components.

* Functional correctness testing is not limited to any specific test level. It can be performed during unit, integration, system, or acceptance testing to verify the accuracy of functions.

* Option B is incorrect because functional completeness is not necessarily the last stage of testing.

* Option C is incorrect because functional appropriateness is mainly done during system testing, not before.

* Option D is incorrect because functional correctness is not restricted to system testing.

The correct answer is A (Functional appropriateness testing is usually undertaken during system testing; functional correctness testing can be conducted at any test level).

NEW QUESTION # 57

Consider the following decision table:

	1	2	3	4	5	6	7	8
C1	1	1	1	1	0	0	0	0
C2	1	1	0	0	1	1	0	0
C3	1	0	1	0	1	0	1	0
A1	X	X						
A2	X							

This decision table has been created to test the following specification: Persons that study at a university (C1) and have parents whose total annual income is less than € 30.000 (C2), receive a scholarship. In addition to these qualifications, if they also live away from home (C3), they receive an addition to their scholarship (A2). How many cases are left when this decision table is collapsed?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

Two cases are left when this decision table is collapsed. A decision table is a technique that shows the combinations of conditions and actions for a given scenario. A decision table that is collapsed eliminates the combinations that are invalid or impossible, such as having a scholarship without meeting the qualifications.

The two valid cases for this scenario are:

* C1 = Y, C2 = Y, C3 = Y, A1 = Y, A2 = Y

* C1 = Y, C2 = Y, C3 = N, A1 = Y, A2 = N

NEW QUESTION # 58

Rather than developing an e-commerce product, management has decided to acquire a COTS package. The e-commerce product needs to interface

with backend applications such as finance, stock control and order delivery. You are asked to define a test plan for this project.

Given just the information in the scenario, which of the following software quality characteristics must be included in your test plan?

- A. Portability
- B. Reliability
- C. Maintainability
- **D. Interoperability**

Answer: D

Explanation:

The software quality characteristic that must be included in the test plan for this project is interoperability.

Interoperability is a software quality characteristic that evaluates the degree to which two or more systems or components can exchange information and use the information that has been exchanged. This characteristic is relevant for a project that involves acquiring a COTS package that needs to interface with backend applications such as finance, stock control, and order delivery.

NEW QUESTION # 59

You are testing a hospital patient management system. New or amended patient data is captured by hospital administrators using an in-house patient capture application and transmitted to one or more hospital departments depending on the nature of the medical condition. Each department operates its own software package.

There has been a change to the patient capture application, and you are going to run a series of interoperability tests.

Which TWO of the following are NOT interoperability defects?

a) The patient name field is truncated on one of the receiving department systems
b) Hospital administrators find the new patient-capture application screens difficult to navigate
c) Two department systems are unable to recognize the format of international telephone numbers for foreign patients
d) Existing patient data takes too long to retrieve by the patient-capture application
e) There are spelling errors in the field names on some screens
SELECT ONE OPTION:

- A. a, c
- **B. b, d**
- C. a, b

Answer: B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

* a) Truncated data is an interoperability issue related to data exchange between systems.

* b) User navigation issues are related to usability, not interoperability.

* c) Format mismatch between systems is an interoperability defect.

* d) Slow data retrieval is related to performance, not interoperability.

* e) Spelling errors relate to usability, not interoperability.

Therefore, the correct answer is A (b, d).

NEW QUESTION # 60

The following depicts a main path through the use case "Return Item":

USE CASE: Return Item

* Use case ID: UC14

* Purpose: Customer selects an item for return and prints return label

* Actors: Customer, System

* Pre-conditions: Customer has opened shopping site home page

Customer Action	System Action
M1 - Select 'My Account'	M2 - Request Log-in details
M3 - Enter Log-In details	M4 - Validate log-in details and display Main Menu
M5 - Select 'My Orders'	M6 - Display Order History screen
M7 - Select 'Return Item'	M8 - Display Return Item screen
M9 - Enter 'Reason for Return'	M10 - Display Print Label screen
M11 - Select 'Print Return Label'	

Exceptions:

- * E1:Customer is already logged-in (Main Menu displayed) - Step M2
- * E2:Invalid log-in details entered (Prompt to retry) - Step M4
- * E3:Third invalid log-in attempt (Account frozen for 24 hours) - Step M4
- * E4:Go-Back requested - Steps M7 (to Main Menu) and M9 (to Order History) You are to apply the Use Case test technique with the following rules:

- * One test case for the basic behavior
- * Multiple alternate behaviors may be combined if compatible
- * Nested alternate behaviors (like retry) should be amalgamated

How many test cases should be designed?

SELECT ONE OPTION:

- A. 0
- B. 1
- C. 2
- **D. 3**

Answer: D

Explanation:

Comprehensive and Detailed In-Depth Explanation:

- * Basic Behavior (1 test case)- The standard process of item return without errors.
- * Alternate Behaviors (2 test cases):
- * Test Case 2:Incorporates E1 (Already logged in) and the normal flow.
- * Test Case 3:Includes E2 (Invalid login attempt), E3 (Third attempt - account frozen), and E4 (Go- Back option).

Combining compatible exceptions and following the amalgamation rule leads to 3 test cases in total.

Therefore, the correct answer is A (3).
