Three Easy-to-Use ITPassLeader Nutanix NCP-DB-6.10 Exam Dumps Formats

As we know, our products can be recognized as the most helpful and the greatest NCP-DB-6.10 study engine across the globe. Even though you are happy to hear this good news, you may think our price is higher than others. We can guarantee that we will keep the most appropriate price because we want to expand our reputation of NCP-DB-6.10 Preparation dumps in this line and create a global brand. What's more, we will often offer abundant discounts of NCP-DB-6.10 study guide to express our gratitude to our customers.

Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q152-Q157):

NEW QUESTION # 152

An NDB administrator would like to configure a database with a Time Machine protection mode that includes the Log Catchup

operation.

What would be the most essential component to make such a configuration possible?

- A. An SLA retention schedule must be identified for daily snapshots.
- B. The Log Catchup frequency must be selected and conform to RPO requirements.
- C. At least one snapshot must be taken daily on the database.
- **D. A protection SLA with the Continuous Log Retention option must be selected.**

Answer: D

Explanation:

To configure a database with a Time Machine protection mode that includes the Log Catchup operation in NDB, the most essential component is a Service Level Agreement (SLA) that supports continuous log retention. The Log Catchup operation enables point-in-time recovery (PITR) by replaying transaction logs from a specified point, ensuring minimal data loss and meeting Recovery Point Objective (RPO) requirements. This functionality depends on the Time Machine being configured with an SLA that includes the "Continuous Log Retention" option, which ensures transaction logs are captured and retained continuously alongside snapshots.

NEW QUESTION # 153

Refer to the exhibit. An administrator wants to register a database using a SQL Server User. Where can this user be specified?

The screenshot shows the 'Register Database Server VM' form. The 'Connect to SQL Server Login' section has a dropdown menu with 'Windows Admin User' selected. The 'User Name' field is empty. The 'API Equivalent' section is also empty. The 'Register' button is highlighted in blue.

- A. By modifying the code in the API Equivalent section
- B. Only via the command line registration option
- **C. In the Login field after selecting SQL Server User**
- D. In the Windows Administrator Name field

Answer: C

Explanation:

The image provided shows the "Register Database Server VM" interface in NDB, which includes fields for registering a database server, including options for Windows and SQL Server credentials. When an administrator wants to register a database using a SQL Server User (instead of Windows credentials), the appropriate place to specify this user is in the "Connect to SQL Server Login" section. The interface includes a "User Name" field under this section, which becomes relevant after selecting the option to use a SQL Server User (typically indicated by a radio button or dropdown, though not fully visible in the image). This allows NDB to authenticate and manage the SQL Server instance using database-specific credentials rather than relying solely on Windows Administrator credentials.

NEW QUESTION # 154

What two Reference: resources are available for Nutanix Era APIs? (Choose two.)

- A. Era API Explorer
- B. Nutanix.dev API Reference:
- C. Era GitHub API Repository
- D. Nutanix Support Portal

Answer: A,B

Explanation:

In addition to the API Reference, the NutanixDev code samples repo provides working code that implements the practices shown in the documentation. The Era API Explorer is another resource that provides a comprehensive view of the available APIs, allowing users to interactively explore and test the APIs. However, there is no mention of a specific "Era GitHub API Repository" or the "Nutanix Support Portal" being used as a Reference: resource for Nutanix Era APIs in the provided resources.

NEW QUESTION # 155

An administrator selected Bronze SLA for Era Time Machine during database registration. Which two capabilities are supported by the Time Machine for this database? (Choose two,)

- A. Log Catch up
- B. Snapshots
- C. Cloning
- D. Provwonng

Answer: A,B

Explanation:

The Nutanix Era Time Machine provides various capabilities depending on the Service Level Agreement (SLA) selected during database registration. For a database with a Bronze SLA, the Time Machine supports both "Log Catch up" and "Snapshots". "Log Catch up" allows the Time Machine to keep up with the latest changes in the database by capturing log data. "Snapshots" are point-in-time copies of the database that can be used for recovery or cloning.

NEW QUESTION # 156

Before registering a database server VM to NDB, what should an administrator use to verify all required software and configuration dependencies?

- A. Upgrade Software
- B. Prerequisites script
- C. NCC
- D. LCM

Answer: B

Explanation:

Before registering a database server VM to NDB, an administrator must verify that all required software (e.g., database engine, OS dependencies) and configuration settings (e.g., WinRM for Windows, SSH for Linux) are in place. NDB provides a prerequisites script, which can be run on the target VM to check these dependencies automatically. This script ensures compatibility and readiness, reducing registration failures.

NEW QUESTION # 157

.....

The Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) certification exam is one of the hottest and most industrial-recognized credentials that has been inspiring beginners and experienced professionals since its beginning. With the NCP-DB-6.10 certification exam successful candidates can gain a range of benefits which include career advancement, higher earning potential, industrial recognition of skills and job security, and more career personal and professional growth.
