Our questions and answers are based on the real exam and conform to the popular trend in the industry.

The American Association of Critical-Care Nurses (AACN) established the CCRN-Pediatric Certification Exam to recognize nurses who possess advanced knowledge and skills in providing care to critically ill pediatric patients. Critical Care Nursing Exam certification exam is designed for experienced nurses who work in pediatric intensive care units (PICUs), cardiac care units, and emergency departments. It evaluates the nurse's knowledge and expertise in areas such as cardiovascular, respiratory, neurological, and gastrointestinal systems, among others.

Our CCRN-Pediatric exam material is full of useful knowledge, which can strengthen your capacity for work. As we all know, it is important to work efficiently. So once you have done you work excellently, you will soon get promotion. You need to be responsible for your career development. The assistance of our CCRN-Pediatric Guide question dumps are beyond your imagination. You will regret if you throw away the good products.

The Critical Care Nursing Exam certification exam is intended for registered nurses who work in a pediatric intensive care unit (PICU) or those looking to specialize in the field of critical care nursing for pediatric patients. The AACN CCRN-Pediatric Exam is designed to validate the nurse's commitment to providing exceptional care and expertise in handling critically ill patients in a high-pressure environment. CCRN-Pediatric Exam Tests the nurse's decision-making skills, prioritization abilities, and technical skills to handle high-stress situations in a PICU setting. Nurses who successfully pass the exam earn a certification that demonstrates their expertise and commitment to providing high-quality care.

## AACN Critical Care Nursing Exam Sample Questions (Q104-Q109):

#### NEW QUESTION # 104

A school age girl was rushed to the Emergency room with symptoms of acute, crampy abdominal pain, fever, and impaired sensory perception. The nurse found a black line between his teeth and gums. The client needs further evaluation because findings are characteristics of:

- A. Perthe's disease
- B. Aspirin toxicity
- **C. Plumbism**
- D. Tetracycline exposure

**Answer: C**

Explanation:

Explanation: Findings are common to lead poisoning or Plumbism attributable to the deposition of lead at the gum lines and in between teeth.

#### NEW QUESTION # 105

A nurse prepares a care plan for a 6 year-old child admitted for Rhabdomyosarcoma. The nurse must alert the staff to pay more attention to the function of which area of the body?

- A. Bones in lower extremities
- **B. Striated muscles**
- C. Eyes
- D. Lips

**Answer: B**

Explanation:

Explanation: Rhabdomyosarcoma is the most common soft tissue sarcoma in pediatric client. It originates in striated (skeletal) muscles and can be found anywhere in the body. Remember that the term "myo" means muscle.

#### NEW QUESTION # 106

A mother brought her child to the clinic with nose bleeding. The nurse showed the mother the most appropriate position for the child which is:

- A. moderate back rest
- B. low back rest
- C. Lying semi flat
- **D. Sitting up**

**Answer: D**

Explanation:

Explanation: This position will minimize the amount of blood pressure in nasal vessels and keep blood moving forward not back into the nasopharynx, which will have the choking sensation and increase risk of aspiration. Other options are inappropriate because they can cause blood to enter the nasopharynx.

#### NEW QUESTION # 107

A patient is admitted with severe anemia requiring urgent intervention. The parents refuse the transfusion due to religious beliefs. The most appropriate action by the nurse is to:

- A. Immediately administer the transfusion to save the patient's life, regardless of the parents' wishes
- B. Convince the parents to change their mind by emphasizing the severity and potential for fatality
- C. Respect the family's wishes to withhold the blood transfusion, and document their refusal
- **D. Consult the hospital's ethics committee and legal team while providing alternative treatments**

**Answer: D**

Explanation:

When treatment is urgently required but parents refuse based on religious beliefs, the nurse must involve the ethics committee and legal team. This supports patient advocacy, honors family beliefs, and ensures compliance with legal and ethical standards in pediatric care. "In cases of refusal of life-saving treatment, the ethics team and legal counsel should be consulted. The nurse must not act unilaterally but advocate for the patient while respecting family beliefs." (Referenced from CCRN Pediatric - Professional Caring and Ethical Practice: Ethical Dilemmas and Legal Considerations in Pediatric Care)

### NEW QUESTION # 108

Which of the following is a prerenal cause of acute renal failure?

- A. Transfusion reaction
- B. Kidney stones
- C. Lead poisoning
- **D. Septic shock**

**Answer: D**

Explanation:

Prerenal failure is caused by conditions that impair renal perfusion without direct injury to the kidneys themselves. Septic shock leads to systemic vasodilation, hypotension, and decreased renal perfusion, making it a classic prerenal etiology.

"Prerenal causes of acute kidney injury (AKI) include any condition resulting in reduced renal blood flow.

Septic shock is a common prerenal cause, where hypoperfusion leads to decreased glomerular filtration." (Referenced from CCRN Pediatric - Direct Care: Renal Dysfunction and Fluid Balance)
