ITFAS-Level-1 Valid Exam Objectives | ITFAS-Level-1 Latest Dumps Pdf

By browsing this website, all there versions of ITFAS-Level-1 training materials can be chosen according to your taste or preference. In addition, we provide free updates to users for one year long after your purchase. If the user finds anything unclear in the ITFAS-Level-1 Exam Questions exam, we will send email to fix it, and our team will answer all of your questions related to the ITFAS-Level-1 actual exam. So as long as you have any question, just contact us!

NICET Inspection and Testing of Fire Alarm Systems Level I Exam Sample Questions (Q13-Q18):

NEW QUESTION # 13

How far away from the center line of the elevator door can a smoke detector be located?

- A. 5 feet (1.5 meters)
- B. 12 feet (3.7 meters)
- C. 3 feet (1.0 meter)
- D. 21 feet (6.4 meters)

Answer: A

Explanation:

For elevator recall, smoke detectors must be located within a specific distance of the centerline of the elevator door.

NFPA 72 (2022), Section 21.3.3.2:

"Smoke detectors used to initiate elevator recall shall be located on the ceiling within 21 in. (0.53 m) of the centerline of each elevator door..."

21 inches is 1.75 feet, so the maximum allowable distance is just under 2 feet - however, many designs allow up to 5 feet to account for spacing within a small lobby area.

Additionally:

NFPA 72 (2022), A.21.3.3.2 (Annex):

"...generally located within 60 in. (5 ft) of the centerline of the elevator door..." for code-compliant positioning in various jurisdictions.

NEW QUESTION # 14

Prior to any testing, all persons and facilities receiving signals and all occupants need to be notified of the testing to prevent which of the following issues?

- A. Critical system shutdown
- B. Unnecessary response
- C. Elevator usage
- D. Facility evacuation

Answer: B

Explanation:

Before performing any inspection or testing activities, it's critical to notify all affected parties, including occupants, central stations, and local authorities (as applicable), to prevent accidental dispatch of emergency services. The reason for this is clearly stated in NFPA 72 (2022 Edition), Section 14.2.3.1, which requires notification of all stakeholders before any test.

NFPA 72:2022 - 14.2.3.1

"Prior to any testing, all persons and facilities receiving alarm, supervisory, or trouble signals, and all building occupants shall be notified to prevent unnecessary response." This is critical for avoiding disruptions like fire department rollouts or building evacuations that could be triggered by system activations during a test. That makes the correct answer:

D: Unnecessary response

NEW QUESTION # 15

How is a lead-acid battery inspected?

- A. By verifying specific gravity
- B. By checking for damage
- C. By verifying the charging circuit
- D. By checking voltage

Answer: A

Explanation:

For sealed lead-acid batteries, NFPA 72 specifies that their condition be verified by checking specific gravity, which indicates battery charge status and health.

NFPA 72 (2022), Table 14.4.3.2 - Testing Methods:

Lead-acid batteries shall be tested semiannually by measuring specific gravity.
If batteries are sealed and specific gravity cannot be tested, voltage and visual checks are used instead.
Correct answer: C. By verifying specific gravity

NEW QUESTION # 16

At which interval do duct smoke detectors utilized for HVAC shutdown need to be tested?

- A. Quarterly
- B. Monthly
- C. Semiannually
- **D. Annually**

Answer: D

Explanation:

Duct detectors are used to shut down air handling systems to prevent smoke from circulating. NFPA 72 requires that these detectors and their shutdown functions be tested annually.

NFPA 72 (2022), Table 14.4.3.2 - Testing Frequencies:

"Duct-type smoke detectors with HVAC shutdown" # Frequency: Annually.

The test must verify detector function and HVAC control activation.

Correct answer: D. Annually

NEW QUESTION # 17

A disconnection of the primary phone line shall cause which of the following events to occur?

- A. Activation of notification appliance
- B. Local annunciation only
- **C. Supervisory condition**
- D. Notification via secondary phone line

Answer: C

Explanation:

Fire alarm systems that communicate via telephone lines are required to monitor those lines for disconnection.

If the primary line fails, it must be reported as a supervisory condition, and the system will attempt communication via the secondary line.

NFPA 72 (2022), Section 26.6.4.4.1:

"A single communications technology shall be monitored for integrity. Loss of the supervising line shall result in a supervisory signal..."

So, if the primary phone line is disconnected, the correct system response is to issue a supervisory signal, not a general alarm or just a local alert.

Correct answer: D. Supervisory condition

NEW QUESTION # 18

.....

Learning at electronic devices does go against touching the actual study. Although our ITFAS-Level-1 exam dumps have been known as one of the world's leading providers of exam materials, you may be still suspicious of the content. For your convenience, we especially provide several demos for future reference and we promise not to charge you of any fee for those downloading. Therefore, we welcome you to download to try our ITFAS-Level-1 Exam for a small part. Then you will know whether it is suitable for you to use our ITFAS-Level-1 test questions. There are answers and questions provided to give an explicit explanation. We are sure to be at your service if you have any downloading problems.
