In order to meet the needs of all customers, Our PAP-001 study torrent has a long-distance aid function. If you feel confused about our PAP-001 test torrent when you use our products, do not hesitate and send a remote assistance invitation to us for help, we are willing to provide remote assistance for you in the shortest time. We have professional staff, so your all problems about PAP-001 Guide Torrent will be solved by our professional staff. We can make sure that you will enjoy our considerate service if you buy our PAP-001 study torrent.

Ping Identity Certified Professional - PingAccess Sample Questions (Q30-Q35):

NEW QUESTION # 30

A change is made to the configuration that prevents user access to an application. No one claims to have made the change. Which log file should the administrator use to determine who made the change?

- A. pingaccess_agent_audit.log
- **B. pingaccess_api_audit.log**
- C. pingaccess_engine_audit.log
- D. pingaccess.log

Answer: B

Explanation:

All administrative API calls that change PingAccess configuration are logged in pingaccess_api_audit.log. This allows administrators to track who made configuration changes.

Exact Extract:

"The pingaccess_api_audit.log file contains entries for all administrative API calls and is used to audit configuration changes."

- * Option A (pingaccess.log) contains runtime system messages but not detailed API audit entries.
- * Option B (pingaccess_engine_audit.log) is specific to engine request/response audit logging.
- * Option C (pingaccess_agent_audit.log) is used for PingAccess Agent traffic auditing, not administrative changes.
- * Option D (pingaccess_api_audit.log) is correct - it tracks admin API modifications.

Reference: PingAccess Administration Guide - Log Files

NEW QUESTION # 31

An internal audit reveals that an agent has been compromised. What action must be taken to re-secure the agent?

- A. Select a new Agent Trusted Certificate
- B. Change the agent.engine.configuration.shared.secretvalue in the agent.properties file
- **C. Download and apply a new agent.properties file**
- D. Reinstall the agent

Answer: C

Explanation:

When a PingAccess agent is compromised, the secure approach is to invalidate the existing credentials and issue a new configuration file from the PingAccess Admin Console. This provides a fresh agent.properties file with new secrets, ensuring compromised keys cannot be reused.

Exact Extract:

"If an agent is compromised, revoke and regenerate the agent configuration by downloading a new agent.properties file from the administrative console."

- * Option A is incorrect - manually changing the secret in the file does not propagate it to PingAccess.
- * Option B is incorrect - trusted certificates are not tied to agent authentication.
- * Option C is unnecessary - reinstalling the agent does not reset credentials.
- * Option D is correct - downloading a new agent.properties file re-secures the agent.

Reference: PingAccess Administration Guide - Agent Management

NEW QUESTION # 32

An administrator needs to support SLO (Single Logout) for a protected web application. What must be configured in a PingAccess Web Session in this situation?

- A. Refresh User Attributes
- **B. SLO scope**
- C. Validate Session
- D. Idle timeout

Answer: B

Explanation:

To enable Single Logout (SLO), the SLO scope must be defined in the PingAccess Web Session configuration. This determines which sessions are ended when a logout request occurs.

Exact Extract:

"The SLO scope option in a web session specifies which applications are included in a logout event when Single Logout is triggered."

* Option A (SLO scope) is correct; it explicitly enables SLO support by linking session termination across apps.

* Option B (Idle timeout) is unrelated; this controls session expiration, not SLO.

* Option C (Validate Session) ensures session state is synchronized but does not configure SLO.

* Option D (Refresh User Attributes) is unrelated; it only controls whether attributes are reloaded.

Reference: PingAccess Administration Guide - Configuring Web Sessions

NEW QUESTION # 33

A PingAccess API deployment requires multiple Access Token Managers to maintain compliance with customer requirements. Which feature must be set on the Token Provider configuration?

- A. Subject Attribute Name
- B. Client Secret
- C. Send Audience
- D. Use Token Introspection Endpoint

Answer: C

Explanation:

When using multiple Access Token Managers, the Send Audience option ensures that tokens are scoped properly and validated against the intended resource/application.

Exact Extract:

"Enable Send Audience in the token provider configuration to support environments with multiple Access Token Managers and enforce correct audience restrictions."

* Option A (Subject Attribute Name) is unrelated - it maps user identity but not token manager selection.

* Option B (Send Audience) is correct - required when multiple ATMs are in use.

* Option C (Use Token Introspection Endpoint) is optional and depends on deployment, not mandatory for multiple ATMs.

* Option D (Client Secret) is part of OAuth client credentials, not specific to multiple ATMs.

Reference: PingAccess Administration Guide - Access Token Management

NEW QUESTION # 34

An administrator needs to configure a protected web application using the Authorization Code login flow. Which two configuration parameters must be set? (Choose 2 answers.)

- A. Virtual Host
- B. OpenID Connect Login Type
- C. OAuth Token Introspection Endpoint
- D. OpenID Connect Issuer
- E. OAuth Client ID

Answer: B,E

Explanation:

When using the Authorization Code Flow for authentication, PingAccess must be configured with:

* An OAuth Client ID that identifies the application to the IdP.

* The OpenID Connect Login Type set to Authorization Code.

Exact Extract:

"When configuring an OIDC web session, specify the OAuth client ID and select the OpenID Connect login type (Authorization Code, Hybrid, or Implicit)."

* Option A (OAuth Token Introspection Endpoint) is not required for Authorization Code flow - token introspection is used in other cases.

* Option B (OAuth Client ID) is correct - required for OIDC authorization requests.

* Option C (OpenID Connect Issuer) is discovered automatically via metadata when you configure the token provider.

* Option D (Virtual Host) is required for application exposure but not specific to OIDC flow.

* Option E (OpenID Connect Login Type) is correct - must be set to "Authorization Code." Reference: PingAccess Administration Guide - Configuring OIDC Web Sessions

NEW QUESTION # 35

.....

Managing time during the Ping Identity PAP-001 exam is a challenging task. Most candidates cannot manage their time during the Ping Identity PAP-001 exam, leave the questions, and fail. Time management skills can help students gain excellent marks in the PAP-001 Exam. Ping Identity PAP-001 practice exam on the software helps you identify which kind of Certified Professional - PingAccess PAP-001 questions are more time-consuming, and they would be able to assess their efficiency in answering questions.
