Oracle 1z0-1073-25必殺問題集、1z0-1073-25認定試験

1z0-1073-25の学習質問は、文化レベルの種類に関係なく、さまざまなレベルのユーザーに適しています。たと

え文化レベルが高くても、1z0-1073-25トレーニング資料で自分に合ったものを見つけることができます。学習方法。それで、1z0-1073-25学習教材のすべてのユーザーにとって、絶好の機会であり、さまざまなタイプから選択できます。また、ますます多くの学生が1z0-1073-25テストガイドを選択します。Oracle Inventory Cloud 2025 Implementation Professionalの学習質問を選択してください！

Oracle Inventory Cloud 2025 Implementation Professional 認定 1z0-1073-25 試験問題 (Q70-Q75):

質問 # 70

SIMULATION

How Back-to-Back Fulfillment Works

The back-to-back process flow is one in which specific sales order demand triggers supply creation and a link is established between the sales order and the supply.

An organization procures goods from an internal or external supplier or source to a specific warehouse from where you can combine those goods with others to create a single shipment to the customer.

Back-to-back supply processes are similar to regular supply processes that deliver supply to a warehouse except for one difference; the back-to-back supply is always reserved to an order management fulfillment line.

At a high level, you can think of back-to-back fulfillment as a three-step process:

1. Creation of a customer sales order (source of demand).
2. Creation and fulfillment of supply document (source of supply) to the fulfillment warehouse.
3. Shipment of sales order from the fulfillment warehouse to the customer.

However, the back-to-back flow is truly a highly integrated process flow involving several Oracle Fusion Cloud applications. The following figure shows the back-to-back process flow in detail. An explanation for each number follows the figure.

正解:

Explanation:

Back-to-Back Fulfillment: Detailed Simulation in Oracle Cloud

Introduction

Back-to-back (B2B) fulfillment is a process where supply is created only after a sales order is placed. The supply is specifically reserved for that order and remains linked until fulfillment is completed. Unlike regular inventory processes, back-to-back fulfillment

ensures that supply is directly tied to a customer demand, optimizing inventory management while maintaining customer satisfaction.

Key Oracle Fusion Cloud Applications Involved

Back-to-back fulfillment integrates multiple Oracle Fusion Cloud applications, including:

- Oracle Order Management (for sales order processing)
- Oracle Procurement (for external supply sourcing)
- Oracle Manufacturing (for in-house production)
- Oracle Inventory Management (for warehouse operations and fulfillment)
- Oracle Supply Chain Orchestration (for coordinating supply processes)
- Oracle Shipping Execution (for shipping to customers)

Step-by-Step Back-to-Back Fulfillment Simulation

Step 1: Creation of a Customer Sales Order (Source of Demand)

A customer places an order for a product that is not available in stock.

The sales order is created in Oracle Order Management.

The system checks inventory availability in Oracle Inventory Cloud.

Since stock is unavailable, the Supply Chain Orchestration (SCO) module triggers a supply request.

The system determines the best supply source based on sourcing rules (Buy, Make, Transfer, or On-Hand Reservation).

The sales order line is marked for back-to-back fulfillment, and a supply order is generated.

☐ **System Action:** The system reserves the sales order and waits for supply to be created.

Step 2: Creation and Fulfillment of Supply (Source of Supply to Warehouse) Once the supply order is created, the system initiates one of the following supply methods:

Option 1: Buy (Procurement from Supplier)

The system generates a Purchase Requisition in Oracle Procurement Cloud.

The requisition is converted into a Purchase Order (PO) and sent to an external supplier.

The supplier fulfills the order and ships the goods to the fulfillment warehouse.

The warehouse receives the items using Oracle Receiving.

Option 2: Make (Manufacturing in-house or contract manufacturing)

The system generates a Work Order in Oracle Manufacturing Cloud.

The work order is scheduled, and production starts.

Once manufacturing is complete, the finished goods are moved to inventory.

Option 3: Transfer (Move from another warehouse or distribution center) The system creates a Transfer Order in Oracle Inventory Cloud.

Stock is transferred from a different warehouse or location.

Once received, inventory is updated in the fulfillment warehouse.

Option 4: On-Hand (Reserve Existing Inventory)

If stock is available in the fulfillment warehouse, the system directly reserves the items.

No additional supply request is needed.

☐ **System Action:** The system updates the sales order and marks it ready for fulfillment once supply is received.

Step 3: Shipment of Sales Order to the Customer

The order is released for picking in Oracle Inventory Cloud.

The picking process begins, and items are packed for shipping.

The shipping team processes the order using Oracle Shipping Execution.

A shipment confirmation is generated, and the order is shipped to the customer.

An invoice is created in Oracle Receivables.

The system marks the sales order as fulfilled and closed.

☐ **Final Action:** The customer receives the order, and the back-to-back fulfillment process is completed.

Key Benefits of Back-to-Back Fulfillment in Oracle Cloud

- ✓ **Optimized Inventory Management** - Stock is acquired only when needed, reducing carrying costs.
- ✓ **Improved Order Fulfillment Efficiency** - Automated supply chain orchestration ensures smooth operations.
- ✓ **Enhanced Customer Satisfaction** - Orders are processed quickly, reducing delays and backorders.
- ✓ **Integrated Supply Chain Execution** - Oracle Fusion applications work together seamlessly.
- ✓ **Flexibility in Sourcing** - Businesses can choose procurement, manufacturing, transfers, or reservations based on demand.

質問 # 71

Steve, your warehouse manager, created a lot for an item by mistake. He is unable to disable this lot from the Manage Lots task. What could be the reason?

- **A. The item is both lot and serial number-controlled.**
- B. The item has not reached the lot expiration date.
- C. Lot uniqueness control is active.

正解: A

質問 # 72

What are two outcomes when a lot expires on an item with lot control enabled?

- A. It remains in inventory and can be transacted.
- B. It cannot be reserved for a date beyond the expiration date.
- C. It is not included in cycle counts.
- D. It is automatically assigned the inactive material status.

正解: A、B

解説:

Plan Inventory Replenishment

質問 # 73

Your supplier is unable to deliver goods on the promise date against a back-to-back order and updates the promise date on the purchase order schedule to a later date.

How is the change handled on the source side?

- A. Date Pushed Out exception is generated in supply orchestration, and order management is notified.
- B. Status quo is maintained on the supply order and sales order.
- C. Order automatically goes on hold in supply orchestration, and the schedule ship date is adjusted in order management.

正解: A

質問 # 74

Which two actions can be performed from the Supply Chain Orchestration work area?

- A. Create a supply request.
- B. View the execution documents of the supply order.
- C. Place supply orders on hold.
- D. Release the planning recommendation.
- E. Perform changes to the supply order.

正解: A、B
