Amazon The Best Accurate CLF-C02 Practice Test Online – Pass CLF-C02 First Attempt

Good product and all-round service are the driving forces for a company. Our Company is always striving to develop not only our CLF-C02 latest practice dumps, but also our service because we know they are the aces in the hole to prolong our career. Reliable service makes it easier to get oriented to the exam. If our candidates fail to pass the CLF-C02 exam unfortunately, you can show us the failed record, and we will give you a full refund. The combination of CLF-C02 Exam Guide and sweet service is a winning combination for our company, so you can totally believe that we are sincerely hope you can pass the CLF-C02 exam, and we will always provide you help and solutions with pleasure, please contact us through email then.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q406-Q411):

NEW QUESTION # 406
Which AWS service or resource must the company use to meet these requirements?

- A. AWS Enterprise Support
- B. AWS WAF
- C. AWS Shield Standard
- D. AWS Shield Advanced

Answer: D

Explanation:

AWS Shield Advanced provides enhanced protection against DDoS attacks and includes access to the AWS DDoS Response Team (DRT) to help mitigate complex DDoS events. AWS Shield Standard offers basic DDoS protection, which is included with AWS services, but does not provide access to the DRT. AWS WAF is a web application firewall, and AWS Enterprise Support is a premium support plan but does not specifically provide DDoS mitigation services or access to the DRT.

NEW QUESTION # 407
Which tasks are the customer's responsibility, according to the AWS shared responsibility model? (Select TWO.)

- A. Secure edge locations.
- B. Patch Amazon RDS DB instances.
- C. Establish the global infrastructure.
- D. Perform client-side data encryption.
- E. Configure 1AM credentials.

Answer: D,E

Explanation:

According to the AWS shared responsibility model, AWS is responsible for the security of the cloud, while the customer is responsible for the security in the cloud. This means that AWS is responsible for protecting the infrastructure that runs all of the services offered in the AWS Cloud, such as the global network, the hardware, the software, and the facilities. The customer is responsible for properly configuring the security of the provided service, such as the guest operating system, the application software, the data, and the network traffic. For abstracted services, such as Amazon RDS, AWS operates the infrastructure layer, the operating system, and the database software, while the customer is responsible for managing their data, classifying their assets, and using IAM tools to apply the appropriate permissions12.
Therefore, the tasks that are the customer's responsibility are:
* Perform client-side data encryption: The customer is responsible for encrypting their data before sending it to AWS, and decrypting it after receiving it from AWS. This ensures that the data is protected in transit and at rest. AWS provides various encryption options, such as AWS Key Management Service (AWS KMS), AWS CloudHSM, and AWS Certificate Manager (ACM)3.
* Configure IAM credentials: The customer is responsible for creating and managing IAM users, groups, roles, and policies that control the access to AWS resources and services. IAM credentials include user names, passwords, access keys, and permissions4.
The tasks that are not the customer's responsibility are:
* Establish the global infrastructure: AWS is responsible for building and maintaining the global network of regions, availability zones, and edge locations that provide low latency, high availability, and fault tolerance for the AWS Cloud5.
* Secure edge locations: AWS is responsible for protecting the physical security of the edge locations, which are sites that deliver cached content to end users with improved performance6.
* Patch Amazon RDS DB instances: AWS is responsible for applying patches and updates to the operating system and the database software of the Amazon RDS DB instances, which are managed relational database service for MySQL, PostgreSQL, Oracle, SQL Server, and Amazon Aurora. References:
* Shared Responsibility Model - Amazon Web Services (AWS)
* Shared responsibility model - Amazon Web Services: Risk and Compliance
* Encryption - Amazon Web Services (AWS)
* What Is IAM? - AWS Identity and Access Management
* Global Infrastructure - Amazon Web Services (AWS)
* Amazon CloudFront Features - Content Delivery Network (CDN)
* [What Is Amazon Relational Database Service (Amazon RDS)? - Amazon Relational Database Service]

NEW QUESTION # 408
A company needs to create and publish interactive business intelligence dashboards. The dashboards require insights that are powered by machine learning.
Which AWS service or tool will meet these requirements?

- A. Amazon Redshift
- B. Amazon Athena
- C. AWS Glue Studio
- D. Amazon QuickSight

Answer: D

Explanation:

Amazon QuickSight is a scalable, serverless, machine learning-powered business intelligence (BI) service built for the cloud. It allows users to create and publish interactive dashboards with insights powered by machine learning, such as anomaly detection and forecasting. This makes it the best option for creating interactive BI dashboards that require machine learning insights.
* A. AWS Glue Studio: Incorrect, as it is an ETL (extract, transform, load) tool for preparing and transforming data, not for creating BI dashboards.
* C. Amazon Redshift: Incorrect, as it is a data warehousing service that can be used with BI tools but is not specifically designed for creating and publishing dashboards.
* D. Amazon Athena: Incorrect, as it is an interactive query service for analyzing data in Amazon S3 using standard SQL, not for creating BI dashboards.
AWS Cloud References:
* Amazon QuickSight

NEW QUESTION # 409
A company needs to identify who accessed an AWS service and what action was performed for a given time period.
Which AWS service should the company use to meet this requirement?

- A. Amazon CloudWatch
- B. Amazon Inspector
- C. AWS CloudTrail
- D. AWS Security Hub

Answer: C

Explanation:
Explanation
AWS CloudTrail is a service that enables governance, compliance, operational auditing, and risk auditing of your AWS account. With CloudTrail, you can log, continuously monitor, and retain account activity related to actions across your AWS infrastructure. You can use CloudTrail to identify who accessed an AWS service and what action was performed for a given time period. Amazon CloudWatch, AWS Security Hub, and Amazon Inspector are AWS services that provide different types of monitoring and security capabilities.

NEW QUESTION # 410
A company has multiple SQL-based databases located in a data center. The company needs to migrate all database servers to the AWS Cloud to reduce the cost of operating physical servers.
Which AWS service or resource will meet these requirements with the LEAST operational overhead?

- A. OpenSearch
- B. Amazon RDS
- C. Amazon EC2 instances
- D. Amazon DynamoDB

Answer: B

NEW QUESTION # 411
......

Many people dream about occupying a prominent position in the society and being successful in their career and social circle. Thus owning a valuable certificate is of paramount importance to them and passing the test CLF-C02 Certification can help them realize their goals.
