Salesforce Process Automation Accredited Professional Sample Questions (Q22-Q27):

NEW QUESTION # 22

How is a flow interview described?

- A. It is a running instance of a flow.
- B. It is a debug instruction.
- C. It is a reflective instance of a flow.
- D. It is a special connector between two elements.

Answer: A

NEW QUESTION # 23

What should be avoided within the loop when working web flows?

- A. Displaying data to the user
- B. Assignment new values to variables.
- C. Nesting another loop.
- D. Executing actions like creating or updating records

Answer: C

Explanation:

When working with loops in Salesforce flows, it's recommended to avoid nesting another loop within a loop (D). Nested loops can significantly increase the complexity and processing time of the flow, potentially leading to performance issues. Instead, it's advisable to design the flow in a way that minimizes the need for nested loops, possibly by restructuring the flow's logic or using collections to handle bulk operations more efficiently. Reference: Salesforce Help Documentation on Flow Best Practices.

NEW QUESTION # 24

The Administrator is creating a login flow for a new application which will be deployed on Salesforce. The create an automation logic to help validate the credentials and access. What is the right design for this?

- A. Leverage Screen Flow for displaying the input fields and for handling the post login and process.
- B. Leverage Screen Flow for displaying the input fields and custom apex triggers for the post login and process.
- C. Leverage Screen Flow for displaying the input fields and autolaunched flow for handling the post login and process
- D. Leverage Process Builder with Workflow rules for displaying the input fields and for handling the post login and process.

Answer: A
