

Three User-Friendly Formats With Real Palo Alto Networks NetSec-Pro Questions

BTW, DOWNLOAD part of BraindumpStudy NetSec-Pro dumps from Cloud Storage: https://drive.google.com/open?id=1i1fl_gj2tllLcmwm0_UStaRWY9pu2Y3d

Our company is famous for its high-quality in this field especially for NetSec-Pro certification exams. It has been accepted by thousands of candidates who practice our study materials for their NetSec-Pro exam. In this major environment, people are facing more job pressure. So they want to get a certification rise above the common herd. How to choose valid and efficient NetSec-Pro Guide Torrent should be the key topic most candidates may concern.

Palo Alto Networks NetSec-Pro Exam Overview:

Certification Vendor:	Palo Alto Networks
Exam Name:	Palo Alto Networks Certified Network Security Professional Exam
Exam Number:	NetSec-Pro
Exam Price:	USD \$200
Exam Format:	Multiple-choice, Multiple-select, Scenario-based questions
Available Languages:	English
Certificate Validity Period:	2 years
Exam Duration:	90 minutes
Real Exam Qty:	60–75

Related Certifications:	Palo Alto Networks Certified Network Security Engineer (PCNSE) Palo Alto Networks Certified Security Operations Professional (SecOps-Pro)
Passing Score:	860 (scaled score, range 300–1000)
Recommended Training:	Palo Alto Networks Official Training
Exam Registration:	Pearson VUE Registration
Sample Questions:	Palo Alto Networks NetSec-Pro Sample Questions
Exam Way:	Online proctored or onsite at Pearson VUE test centers
Pre Condition:	Recommended: 2–3 years of network security experience; familiarity with Palo Alto NGFW, Prisma Access, and Panorama
Official Syllabus URL:	https://www.paloaltonetworks.com/education/certification/network-security-professional

First-grade Palo Alto Networks NetSec-Pro - New Palo Alto Networks Network Security Professional Exam Answers

By practicing under the real exam scenario of this Palo Alto Networks NetSec-Pro web-based practice test, you can cope with exam anxiety and appear in the final test with maximum confidence. You can change the time limit and number of questions of this Palo Alto Networks NetSec-Pro web-based practice test. This customization feature of our Palo Alto Networks Network Security Professional (NetSec-Pro) web-based practice exam aids in practicing as per your requirements. You can assess and improve your knowledge with our Palo Alto Networks NetSec-Pro practice exam.

Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details
Topic 1	NGFW and SASE Solution Functionality: This part assesses the knowledge of firewall administrators and network architects on the functions of various Palo Alto Networks firewalls including Cloud NGFWs, PA-Series, CN-Series, and VM-Series. It covers perimeter and core security, zone security and segmentation, high availability, security and NAT policy implementation, as well as monitoring and logging. Additionally, it includes the functionality of Prisma SD-WAN with WAN optimization, path and NAT policies, zone-based firewall, and monitoring, plus Prisma Access features such as remote user and network configuration, application access, policy enforcement, and logging. It also evaluates options for managing Strata and SASE solutions through Panorama and Strata Cloud Manager.
Topic 2	GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.
Topic 3	Platform Solutions, Services, and Tools: This section measures the expertise of security engineers and platform administrators in Palo Alto Networks NGFW and Prisma SASE products. It involves creating security and NAT policies, configuring Cloud-Delivered Security Services (CDSS) such as security profiles, User-ID and App-ID, decryption, and monitoring. It also covers the application of CDSS for IoT security, Enterprise Data Loss Prevention, SaaS Security, SD-WAN, GlobalProtect, Advanced WildFire, Threat Prevention, URL Filtering, and DNS security. Furthermore, it includes aligning AIOps with best practices through administration, dashboards, and Best Practice Assessments.

Palo Alto Networks Network Security Professional Sample Questions (Q84-Q89):

NEW QUESTION # 84

Which set of practices should be implemented with Cloud Access Security Broker (CASB) to ensure robust data encryption and

protect sensitive information in SaaS applications?

- A. Use default encryption keys provided by the SaaS provider.
- B. Do not enable encryption for data-at-rest to improve performance.
- C. Perform annual encryption key rotations.
- **D. Enable encryption for data-at-rest and in transit, regularly update encryption keys, and use strong encryption algorithms.**

Answer: D

Explanation:

CASB integration should focus on comprehensive data protection, which includes encryption for data-at-rest and in transit, frequent key updates, and using strong encryption algorithms to ensure confidentiality and data integrity.

"CASB solutions should enforce encryption for data-at-rest and in transit, implement key rotation policies, and leverage robust encryption algorithms to protect sensitive SaaS application data." (Source: CASB Deployment Best Practices)

NEW QUESTION # 85

Which Security policy on a data center NGFW will block intrazone traffic in Zone Colorado for the Dynamic User Group "Testers" and custom application "Payment System"?

- A. Source Zone = Colorado
Destination Zone = LA
Users = Testers
Application = Any
Action = Deny
- B. Source & Destination Zone = Colorado
Users = Testers
Application = Any
Action = Deny
- C. Source Zone = Colorado
Destination Zone = LA
Users = Testers
Application = Payment System
Action = Deny
- **D. Source & Destination Zone = Colorado
Users = Testers
Application = Payment System
Action = Deny**

Answer: D

Explanation:

Setting both the source and destination zones to Colorado with the specified Dynamic User Group and application ensures that intrazone traffic for the Payment System is blocked.

NEW QUESTION # 86

An administrator wants to implement additional Cloud-Delivered Security Services (CDSS) on a data center NGFW that already has one enabled. What benefit does the NGFW's single-pass parallel processing (SP3) architecture provide?

- **A. There will be only a minor reduction in performance.**
- B. There will be no additional performance degradation.
- C. It allows additional security inspection devices to be added inline.
- D. It allows for traffic inspection at the application level.

Answer: A

Explanation:

The SP3 architecture of Palo Alto NGFWs ensures that additional security services (CDSS) only cause a minor reduction in performance, as traffic is inspected once in a single pass.

The single-pass parallel processing (SP3) architecture performs application identification and security enforcement simultaneously in

one pass, resulting in only minor performance impacts when enabling multiple security services.
Unlike traditional multi-pass engines, SP3 architecture optimizes performance while delivering comprehensive security.

NEW QUESTION # 87

Which action is only taken during slow path in the NGFW policy?

- A. Layer 2-Layer 4 firewall processing
- B. Security policy lookup
- C. Session lookup
- **D. SSL/TLS decryption**

Answer: D

Explanation:

In Palo Alto Networks' Single-Pass Parallel Processing (SP3) architecture, SSL/TLS decryption occurs only during the slow path when the firewall first encounters a new session.

"SSL/TLS decryption, which requires CPU-intensive cryptographic operations, is performed during the slow path when establishing new sessions. Once decrypted, traffic is processed in the fast path for subsequent packets." (Source: Packet Flow and SP3 Architecture) After the initial decryption in the slow path, decrypted traffic is handled by fast path for efficiency.

NEW QUESTION # 88

What is a necessary step for creation of a custom Prisma Access report on Strata Cloud Manager (SCM)?

- A. Open a support ticket.
- B. Set up Cloud Identity Engine.
- **C. Configure a dashboard.**
- D. Generate a PDF summary report.

Answer: C

Explanation:

To create custom Prisma Access reports within SCM, you first configure a dashboard that aggregates the relevant logs and analytics. This allows you to define the data points you want to include.

Dashboards in SCM can be customized to include Prisma Access data sources, enabling you to create and generate reports that meet specific business and security requirements.

Once configured, you can export the dashboard as a custom report.

Use the dashboard's data visualization to create custom reports for Prisma Access, which can be exported as PDFs for distribution.
