Valid Salesforce Plat-Dev-210 Practice Test Engine | Try Free Demo before Purchase

You must be curious about your exercises after submitting to the system of our Plat-Dev-210 study materials. Now, we have designed an automatic analysis programs to facilitate your study. You will soon get your learning report without delay. Not only can you review what you have done yesterday on the online engine of the Plat-Dev-210 study materials, but also can find your wrong answers and mark them clearly. So your error can be corrected quickly. Then you are able to learn new knowledge of the Plat-Dev-210 Study Materials. Day by day, your ability will be elevated greatly. Intelligent learning helper can relieve your heavy burden. Our Plat-Dev-210 study materials deserve your purchasing. If you are always waiting and do not action, you will never grow up.

Salesforce Plat-Dev-210 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.

Topic 2	<ul style="list-style-type: none"> • Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
Topic 3	<ul style="list-style-type: none"> • Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.

Salesforce Certified Omnistudio Developer Sample Questions (Q102-Q107):

NEW QUESTION # 102

A healthcare company wants to enable its subscribers to add, edit, or delete dependents related to their policy via their Community portal. The developer on the project decides to use an OmniScript.

How should the developer configure the OmniScript to provide this functionality?

- **A. Use an Edit Block element configured with Remote Actions.**
- B. Use an Edit Block element configured with SOQL statements.
- C. Use an Input Block element and a Data Mapper Post Action element.
- D. Use a Text Block element and a Remote Action element.

Answer: A

Explanation:

In OmniStudio, the Edit Block element is purpose-built for allowing users to dynamically add, edit, or delete rows of related data, such as dependents under a policy. To save these changes, Remote Actions (typically backed by Apex or API) are used to process each record operation (Create/Update/Delete).

* A. Use an Edit Block element configured with Remote Actions - Correct. This is the recommended and most scalable way to support CRUD operations in OmniScripts for collections (e.g., dependents).

The Edit Block provides UI-level support, while Remote Actions handle back-end interaction with Salesforce or external systems.

Incorrect Options:

* B. Text Block is for display purposes and cannot manage data input or backend actions.

* C. Input Block elements do not support row-level add/edit/delete functionality as Edit Blocks do.

* D. SOQL is a read-only query language and cannot be used to update or delete records directly within an OmniScript.

:

Salesforce OmniStudio Guide # OmniScript Edit Block Element

OmniStudio Best Practices # CRUD Operations in OmniScripts

NEW QUESTION # 103

A developer needs to use the CONTIF function to process data entered by the user in an OmniScript. The output of the function needs to be displayed to the user immediately in the current step.

Based on best practice, what element should the developer use this function in?

- A. A Calculation Action element
- B. A Range element
- **C. A formula element**
- D. A Set Values element

Answer: C

Explanation:

A formula element allows the developer to define formulas using functions and operators to manipulate data in an OmniScript. The output of the formula element can be displayed to the user immediately in the current step using a display element. The CONTIF function counts how many times a value appears in a list. A Calculation Action element executes a calculation procedure and returns the output as a JSON object. A Set Values element assigns values to variables or fields in an OmniScript. A Range element

defines a range of values for a variable or field in an OmniScript1. Based on best practice, a formula element is the most suitable element to use the CONTIF function in this scenario.

NEW QUESTION # 104

A developer is creating a Flex Card for a new Community page. The FlexCard will display case information along with action to close the case and update the case. And it will be styled using the Community's theme.

What must be developer do to configure the FlexCard for deployment in a community?

- A. Configure the Component visibility in the custom Component.
- B. Add the FlexCard's API name to FlexCard Player component
- C. Set the Developer property in Card Configuration to "Community"
- **D. Set the Target property in publishing Options to the Community page"**

Answer: D

Explanation:

The Target property in publishing Options determines where the FlexCard will be displayed. Setting it to the Community page will make the FlexCard available in the community

NEW QUESTION # 105

In an Integration Procedure, a developer needs to perform a multi-step calculation on every element of an array.

Based on best practices, what two methods are recommended?

Choose 2 answers

- A. Use a List Action to merge the array elements together.
- **B. Use a Matrix Action to call a Calculation Matrix.**
- C. Use a Set Values Element inside a Loop Block.
- **D. Use a Calculation Action to call a Calculation Procedure.**

Answer: B,D

Explanation:

According to the Integration Procedure Actions page, a Calculation Action can be used to "call a Calculation Procedure that performs calculations on input data" and a Matrix Action can be used to "call a Calculation Matrix that performs calculations on input data".

NEW QUESTION # 106

What two advantages does a DataRaptor Turbo Extract have over a standard DataRaptor Extract?

Choose 2 answers

- A. It supports complex field mappings
- **B. It is easier to configure**
- **C. It has better performance at runtime**
- D. It populates data in PDF and DocuSign format

Answer: B,C

Explanation:

A DataRaptor Turbo Extract is a simplified version of a DataRaptor Extract that can retrieve data from a single object without changing the structure of the output data. It is easier to configure because it does not require defining extraction steps or JSON paths. It also has better performance at runtime because it uses a native query engine instead of a custom one

NEW QUESTION # 107

.....

When we are in some kind of learning web site, often feel dazzling, because web page appear too desultory. Absorbing the lessons

of the Plat-Dev-210 test prep, will be all kinds of qualification examination classify layout, at the same time on the front page of the Plat-Dev-210 test materials have clear test module classification, so clear page design greatly convenient for the users, can let users in a very short period of time to find what they want to study, and then targeted to study. Saving the precious time of users, also makes the Plat-Dev-210 Quiz torrent look more rich.
