In addition, AD0-E725 exam dumps are high-quality, and you can pass the exam just one time. AD0-E725 exam materials cover most of knowledge points for the exam, and they will help you pass the exam as well as improve your ability in the process of learning. We also pass guarantee and money back guarantee for AD0-E725 and if you fail to pass the exam, we will give you full refund.

Adobe Commerce Developer Expert Sample Questions (Q12-Q17):

NEW QUESTION # 12

A Developer is integrating a custom third-party gift card system into the Adobe Commerce checkout. During the checkout process, a customer enters a store-bought gift card for payment, and depending on external API checks, the gift card is verified and allowed to be used on the order.

Which approach should be used for the internal processing of such functionality?

- A. Directly subtract the gift card amount from the order, keeping no history of the discount transaction.
- **B. Create a unique voucher code for each gift card usage request which grants a discount on the order's total.**
- C. Create an Adobe Commerce gift card account and manage the account using the gift card repositories.

Answer: B

NEW QUESTION # 13

A client expresses disappointment with the underreported engagement and revenue metrics reported by Product Recommendations. Which limitation or consideration of this service should be communicated to the client?

- A. Product Recommendations does not support insightful engagement and revenue metrics; an additional service contract is required for this feature.
- **B. Ad blockers and privacy settings can prevent Product Recommendations from capturing shopper behavior.**
- C. Product Recommendations requires the purchase of an additional license to enable real-time reporting.

Answer: B

NEW QUESTION # 14

An Adobe Commerce Developer is tasked with adding a custom tax calculation to the checkout process. In addition to core tax calculations, a legacy code extending core tax calculation classes is also found. The Developer wants to utilize Magento's dependency injection system effectively to meet requirements, ensuring the solution works without modifying the existing core and legacy classes.

What should the Developer implement to achieve this?

- A. Preferences
- B. Constructor arguments
- **C. Virtual types**

Answer: C

Explanation:

The correct approach is Virtual types.

Virtual types allow developers to configure existing classes with different constructor arguments and create multiple variations of the same class without modifying the core or legacy code.

Preferences (C) would replace one class with another entirely, which could break the legacy functionality.

Constructor arguments (A) are part of DI but don't allow multiple variants of the same class like virtual types do.

Reference:

Adobe Commerce DevDocs - Virtual types

NEW QUESTION # 15

A recent client-reported bug is fixed by the Adobe Commerce community. The Adobe engineering team has not yet released the patch or committed the bug fix to GitHub. A Developer acquires the custom patch and releases it to their Adobe Commerce environments.

What are the recommended steps the Developer should follow to implement the custom patch for the bug fix?

- A. Update the quality-patches module and list the required patch in the magento-ce-patch.yaml file.
- **B. Install the cweagans/composer-patches module and edit the composer.json file to apply the custom patch.**
- C. Install only official patches supplied by them to maintain upgradability.

Answer: B

NEW QUESTION # 16

A customer wants to create a set of CMS blocks to be used on their website but does not wish to create these manually. An Adobe Commerce Developer is tasked to install the CMS blocks programmatically.

How should the Developer achieve this?

- A. Implement the InstallSchemaInterface, then use the block repository in the execute() function to create the blocks.
- **B. Implement the DataPatchInterface, then use the block repository in the apply() function to create the blocks.**
- C. Implement the SchemaSetupInterface, then use the block repository in the apply() function to create the blocks.

Answer: B

NEW QUESTION # 17
