SPLK-1002 Exam can be taken at any time, and candidates can schedule the exam according to their availability.

Splunk Core Certified Power User Exam Sample Questions (Q153-Q158):

NEW QUESTION # 153

Which is not a comparison operator in Splunk

- A. =
- B. <=
- C. !=
- D. >
- E. ?=

Answer: E

NEW QUESTION # 154

To create a tag, which of the following conditions must be met by the user?

- A. Be able to edit the sourcetype the tag applies to.
- **B. Must have the tag capability associated with their user role.**
- C. Identify at least one field:value pair.
- D. Have the Power role at a minimum.

Answer: B

Explanation:

To create a tag, the user must have the tag capability associated with their user role. The tag capability allows the user to create, edit, and delete tags. The user does not need to identify a field:value pair, have the Power role, or be able to edit the sourcetype the tag applies to. [References](#) See Define and manage tags in Settings and [\[About capabilities\]](#) in the Splunk Documentation.

NEW QUESTION # 155

Which of the following statements describe the Common Information Model (CIM)? (select all that apply)

- **A. CIM is a methodology for normalizing data.**
- **B. CIM can correlate data from different sources.**
- C. CIM is an app that can coexist with other apps on a single Splunk deployment.
- **D. The Knowledge Manager uses the CIM to create knowledge objects.**

Answer: A,B,D

NEW QUESTION # 156

When performing a regular expression (regex) field extraction using the Field Extractor (FX), what happens when the require option is used?

- A. The events without the required field will not display in searches.
- B. The field being extracted will be required for all future events.
- C. The regex can no longer be edited.
- **D. Only events with the required string will be included in the extraction.**

Answer: D

Explanation:

Explanation

The Field Extractor (FX) allows you to use regular expressions (regex) to extract fields from your events using a graphical interface or by manually editing the regex2. When you use the FX to perform a regex field extraction, you can use the require option to specify a string that must be present in an event for it to be included in the extraction2. This way, you can filter out events that do not contain the required string and focus on the events that are relevant for your extraction2. Therefore, option D is correct, while options A, B and C are incorrect.

NEW QUESTION # 157

Which of the following statements describes the use of the Field Extractor (FX)?

- **A. Fields extracted using the Field Extractor persist as knowledge objects.**
- B. Fields extracted using the Field Extractor do not persist and must be defined for each search.
- C. The Field Extractor uses PERL to extract fields from the raw events.
- D. The Field Extractor automatically extracts all fields at search time.

Answer: A

Explanation:

NEW QUESTION # 158
