Fortinet FCSS—Advanced Analytics 6.7 Architect Sample Questions (Q31-Q36):

NEW QUESTION # 31

What are the modes of Data Ingestion on FortiSOAR? (Choose three.)

- A. Policy based
- B. Notification based
- C. Schedule based
- D. Rule based
- E. App Push

Answer: B,C,E

NEW QUESTION # 32

Refer to the exhibit.

Which deployment type is shown in the exhibit?

- A. Hybrid deployment with and without collectors
- B. Enterprise cloud deployment
- C. Service provider with collectors
- D. Service provider without collectors

Answer: A

Explanation:

The exhibit shows a FortiSIEM cluster deployed in a multi-tenant service provider environment, serving multiple customers. The architecture includes:

1. Customers with Collectors

Customer A and Customer B (AWS) have collectors deployed within their environments.

Collectors gather and forward logs to the FortiSIEM cluster for centralized analysis.

2. Customers Without Collectors

Customer C does not have a collector; instead, it sends logs directly to the FortiSIEM cluster.

3. Super Organization Managing Infrastructure

The service provider infrastructure devices (e.g., networking and security appliances) are managed directly by the FortiSIEM cluster.

This mixed setup, where some customers use collectors while others send logs directly, represents a hybrid deployment with and without collectors.

NEW QUESTION # 33

Refer to the exhibit.

Name	IP	Device Type	Status	Discovered	Method	Agent Policy	Agent Status	Monitor Status	Event Status
FortiBank_Collector	10.10.2.64	Generic Unix	Pending	Oct 28, 2021, 12:52:54 PM	LOG				Warning
fortibank_dc.fortibank.net	10.10.2.63	Windows	Pending	Oct 28, 2021, 02:48:42 PM	AGENT		Running Inactive		

What are three possible reasons why the Agent Status displays Running Inactive? (Choose three.)

- A. The agent was registered incorrectly
- B. The template was removed
- C. The collector was not assigned to the agent
- D. The agent is temporarily down
- E. The template was not assigned

Answer: A,D,E

Explanation:

In FortiSIEM, an agent's status of "Running Inactive" indicates that the agent is installed and running but not actively sending data or has encountered a misconfiguration. The following reasons can cause this status:

1. The agent was registered incorrectly

If an agent was not registered properly, it might not establish a proper connection with the FortiSIEM system, resulting in an inactive status.

2. The agent is temporarily down

If the agent goes offline (e.g., due to system shutdown, network issues, or agent crash), it will show as inactive.

3. The template was not assigned

Agents require a template to function correctly. If no template is assigned, the agent cannot collect or process events, leading to an inactive state.

An administrator runs an analytic search for all FortiGate SSL VPN logon failures. The results are grouped by source IP, reporting IP, and user. The administrator wants to restrict the results to only those rows where the COUNT >= 3.

Which user would meet that condition?

- A. Sarah
- B. Jan
- C. Tom
- D. Admin

Answer: C

NEW QUESTION # 35

Refer to the exhibit.

Filter query referencing lookup table MalwareIPList

Filter

☐ Event Keyword

☒ Event Attribute

Paren	Attribute	Operator	Value	Next	Row
	Event Type	IN	Group: Permit Traffic		
	LookupTableGet(MalwareIPList : Sc	>=	87		

LookupTableGet (MalwareIPList : Source IP : Confidence) >= 87

☐ CMDB Attribute

Time Range

☐ Real-time

☒ Relative Last 10 Hours

☐ Absolute

Trend Interval: Auto

Apply & Run Apply Cancel

Consider a custom lookup table MalwareIPList. An analyst constructed an analytic query to reference the MalwareIPList lookup table.

What is the outcome of the analytic query?

- A. The analyst receives an error because the LookupTableGet function can be used only in display filters to enrich data.
- B. The IP address from permitted traffic with a confidence score of 98 is displayed.
- C. The value for the LookupTableGet function in the analytic search can be either true or false.
- D. The permitted traffic IP address from the Phishing category is displayed.

Answer: A

Explanation:

The LookupTableGet function is designed to enrich event data by referencing a lookup table. However, it cannot be used directly in analytic queries for filtering data before processing. Instead, it is meant to be applied as a display filter to enhance results after retrieval.

In the given query, LookupTableGet(MalwareIPList : Source IP : Confidence) >= 87 is being used in a filter condition, which leads to an error because the function is not valid in this context. It should be applied after the data is retrieved, not as a pre-processing filter.
