- B. It manages the SR Linux and customer-defined applications.
- C. It reads the application's configuration information and starts each application.
- D. It monitors the health of all applications.

NEW QUESTION # 11
Which of the following statements about resilient ECMP load balancing is TRUE?

- A. The hash value used to distribute traffic is calculated as a modulo function on specific fields of the packet header.
- B. A different hash seed is used on downstream routers to ensure that flows are randomly distributed across all eligible router interfaces.
