Exam C-BCBDC-2505 Book & C-BCBDC-2505 Valid Exam Syllabus

Our C-BCBDC-2505 exam questions are famous for the good performance and stable operation. Customers usually attach great importance on the function of a product. So after a long period of research and development, our C-BCBDC-2505 learning prep has been optimized greatly. We can promise that all of your operation is totally flexible. Even if we come across much technology problems, we have never given up. Also, we take our customers' suggestions of the C-BCBDC-2505 Actual Test guide seriously. Sometimes, we will receive some good suggestions from our users. Once our researchers regard it possible to realize, we will try our best to perfect the details of the C-BCBDC-2505 learning prep. We are keeping advancing with you. You will regret if you do not choose our study materials.

SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q66-Q71):

NEW QUESTION # 66

A healthcare organization is using SAP Business Data Cloud and needs to maintain an audit trail of all changes made to financial data models. Which features help achieve this?

There are 3 correct answers to this question.

Response:

- A. Lineage tracking
- B. Business Catalog publication
- C. Manual logs in Excel
- D. Version history
- E. Change history view

Answer: A,D,E

NEW QUESTION # 67

Which of the following activities does SAP Business Data Cloud cockpit support? Note: There are 2 correct answers to this question.

- A. Debug authorization issues
- B. Enhance Analytic Models
- C. Discover and activate data products
- D. Configure SAP Business Data Cloud

Answer: C,D

Explanation:

The SAP Business Data Cloud (BDC) Cockpit serves as the central administrative and operational interface for managing the BDC environment. Among its core functionalities, it directly supports the ability to configure SAP Business Data Cloud. This includes setting up connections, managing spaces, configuring system parameters, and generally overseeing the platform's infrastructure. It provides administrators with the necessary tools to tailor the BDC environment to specific organizational needs. Additionally, the

cockpit is instrumental in allowing users to discover and activate data products. Data products are pre-built, semantically rich data assets that encapsulate business logic and data from various sources, offered within the BDC ecosystem. The cockpit acts as a marketplace or catalog where users can find relevant data products, understand their content, and activate them for use in their analytics and applications. While "Enhance Analytic Models" is done in tools like SAP Datasphere's Data Builder and debugging authorization issues might involve various tools, direct configuration and data product management are key features of the BDC Cockpit.

NEW QUESTION # 68

Which data source does not require a model be created for it in SAP Analytics Cloud for use in stories?

Please choose the correct answer.

Response:

- A. SAP Business Warehouse (BW)
- B. Microsoft SharePoint
- C. SAP Datasphere

Answer: C

NEW QUESTION # 69

What are some features of the out-of-the-box reporting with intelligent applications in SAP Business Data Cloud? Note: There are 2 correct answers to this question.

- A. Services for transforming and enriching data
- B. Manual creation of artifacts across all involved components
- C. AI-based suggestions for intelligent applications in the SAP Business Data Cloud Cockpit
- D. Automated data provisioning from business application to dashboard

Answer: A,D

Explanation:

The out-of-the-box reporting capabilities with intelligent applications in SAP Business Data Cloud (BDC) are designed to streamline the analytical process and deliver immediate value. Two significant features include automated data provisioning from business application to dashboard. This means that intelligent applications handle the end-to-end flow of data, from its source in operational systems, through processing in BDC, and finally to visualization in dashboards, with minimal manual intervention. This automation ensures timely and consistent data delivery for reporting. Additionally, these intelligent applications leverage services for transforming and enriching data. As part of the pre-built logic within these applications, data is automatically transformed (e.g., aggregated, filtered) and enriched (e.g., adding calculated KPIs, combining with master data) to make it immediately suitable for reporting and analysis. This reduces the need for manual data manipulation by users, providing ready-to-consume insights.

NEW QUESTION # 70

The Data Access Language option determines the preferred language for which areas of SAP Analytics Cloud?

There are 2 correct answers to this question.

Response:

- A. Imported Data
- B. Text
- C. Help
- D. Live Data

Answer: B,D

NEW QUESTION # 71
