

Valid free 300-540 exam answer collection - 300-540 real vce

2026 Latest 2Pass4sure 300-540 PDF Dumps and 300-540 Exam Engine Free Share: https://drive.google.com/open?id=17caHyXumrn9TC_TTKoqkWH_g5qXa0VieF

2Pass4sure is a platform that will provide candidates with most effective 300-540 study materials to help them pass their exam. It has been recognized by all of our customers, because it was compiled by many professional experts of our website. Not only did they pass their exam but also got a satisfactory score. These are due to the high quality of our 300-540 study torrent that leads to such a high pass rate.

Cisco 300-540 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Virtualized Architecture: This section of the exam measures the skills of Cloud Network Engineers and covers the foundational concepts of virtualized infrastructures used in modern service provider and cloud environments. Candidates are expected to understand constraints in IaaS designs, determine appropriate cloud service models, and demonstrate awareness of container orchestration compared to traditional virtual machines. The exam also evaluates the ability to implement key virtualization functions such as NFV, VNF, NSO, and virtualized Cisco platforms. Learners must be able to deploy NFV with automation tools, manage VNF onboarding, work with NSO-driven orchestration, and use protocols like NETCONF, RESTCONF, REST APIs, and gNMI within automated cloud ecosystems. A general understanding of supporting platforms such as OpenStack also forms part of the required knowledge in this domain.

Topic 2	<ul style="list-style-type: none"> Cloud Interconnect: This section of the exam measures the skills of Service Provider Network Engineers and covers how large networks interconnect with cloud platforms and carrier-neutral facilities. Candidates are expected to understand various connectivity options to cloud providers, customer sites, and other neutral facilities, as well as evaluate WAN connectivity models such as direct connect, MPLS or segment routing, and IPsec VPN links. The domain also includes the ability to troubleshoot advanced data center interconnect solutions, including EVPN VXLAN, EVPN over SR MPLS, ACI-based connectivity, and pseudowire architectures supporting cloud-to-cloud and cloud-to-edge communication.
Topic 3	<ul style="list-style-type: none"> Security: This section of the exam measures the skills of Network Security Engineers and covers the implementation of infrastructure-level protection in cloud and NFVI ecosystems. It includes topics such as ACLs, uRPF, RTBH, router hardening, BGP flowspec, TACACS, and MACSEC. Candidates should understand DoS mitigation methods and apply security practices within NFVI, focusing on API protection, securing the control and management plane, and segmentation strategies in service provider cloud environments. The domain also evaluates basic knowledge of TLS, mTLS, and general cloud security solutions related to DNS protection, zero-day defenses, and malware detection.
Topic 4	<ul style="list-style-type: none"> High Availability: This section of the exam measures the skills of Cloud Infrastructure Architects and covers the design and implementation of redundancy and resiliency mechanisms in virtualized network functions and distributed cloud platforms. It includes data plane redundancy for VNFs, high availability within a single VIM control plane, and resilient compute, vNIC, and top-of-rack switching. The exam requires an understanding of multi-homing, EVLAG configurations, virtual private cloud deployment, and ECMP strategies for NFVI integrations with physical routing protocols such as BGP, OSPF, and IS-IS. Candidates must also recommend suitable high-availability models involving DNS, routing, and load balancing.
Topic 5	<ul style="list-style-type: none"> Service Assurance and Optimization: This section of the exam measures the skills of Cloud Operations Engineers and covers assurance mechanisms used to maintain performance, stability, and visibility across NFVI environments. It includes network assurance concepts such as MANO frameworks, VNF workload monitoring, VIM control plane KPIs, and streaming telemetry with gRPC and gNMI. Candidates must understand cloud infrastructure performance monitoring tools, including SR-PM, NetFlow, IPFIX, syslog, SNMP traps, RMON, cloud agents, and automated fault management systems. The domain also touches on diagnosing NFVI-related errors and optimizing VNFs using techniques such as SR-IOV and software-accelerated virtual switching technologies like DPDK and VPP.

Cisco Valid 300-540 Study Notes: Designing and Implementing Cisco Service Provider Cloud Network Infrastructure - 2Pass4sure Brings the best New Braindumps Files with One Year Free Updates

300-540 answers real questions can help candidates have correct directions and prevent useless effort. If you still lack of confidence in preparing your exam, choosing a good 300-540 answers real questions will be a wise decision for you, it is also an economical method which is saving time, money and energy. Valid 300-540 Answers Real Questions will help you clear exam at the first time, it will be fast for you to obtain certifications and achieve your dream.

Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Sample Questions (Q141-Q146):

NEW QUESTION # 141

An engineer must configure NTP servers in Cisco Enterprise NFVIS. The primary NTP server has an IP address of 192.168.1.1 and the backup NTP server has an IP address of 192.168.2.1. Which two commands must be run to complete the configuration? (Choose two.)

- A. system set-manual-time 192.168.1.1 192.168.2.1
- B. utils ntp server add 192.168.2.1 backup

- C. system time ntp preferred_server 192.168.1.1
- D. system time ntp backup_server 192.168.2.1
- E. utils ntp server add 192.168.1.1 primary

Answer: C,D

Explanation:

In Cisco Enterprise NFVIS, time synchronization is configured using the `system time ntp` command structure. NFVIS requires a primary and optionally a backup NTP server to maintain accurate system time for the hypervisor and guest VMs. Correct NFVIS command syntax for NTP configuration:

* `system time ntp preferred_server <IP>` This command configures the preferred (primary) NTP server used for system clock synchronization.

* `system time ntp backup_server <IP>` This command configures the backup NTP server, which the system uses if the primary becomes unreachable.

These two commands match Cisco NFVIS time-configuration behavior described in NFV infrastructure design and implementation guidelines.

Why the Correct Answers Are A and E

Option A: `system time ntp preferred_server 192.168.1.1`

This properly configures the primary NTP server in NFVIS. The preferred server is always the first choice for time synchronization.

Option E: `system time ntp backup_server 192.168.2.1`

This correctly configures the backup NTP server. If the preferred server fails, NFVIS automatically falls back to the backup server.

Both commands directly match NFVIS's NTP command hierarchy and are the only ones that correctly apply to NFVIS.

Why the Other Options Are Not Correct

Option B uses `utils ntp`, which is not an NFVIS command.

Option C sets manual time and does not configure NTP servers.

Option D also uses the `utils ntp` syntax, which applies to other Cisco platforms but not NFVIS.

NEW QUESTION # 142

uRPF is utilized to combat which type of security threat?

- A. Spoofing attacks
- B. Viruses
- C. DDoS attacks
- D. Insider threats

Answer: A

NEW QUESTION # 143

gNMI/gRPC are used in network management for:

- A. Providing high-performance, bi-directional streaming of network state information
- B. Exclusively managing physical network devices
- C. Reducing the efficiency of network operations
- D. Simplifying manual network configuration tasks

Answer: A

NEW QUESTION # 144

A key benefit of data plane high availability in VNF is:

- A. Enhanced performance and reliability
- B. Lower operational costs
- C. Simplified network design
- D. Increased network congestion

Answer: A

NEW QUESTION # 145

Virus detectors are used to:

- A. Encrypt traffic
- B. Manage user access
- C. Monitor network bandwidth
- D. Identify and eliminate malware

Answer: D

NEW QUESTION # 146

Our specialists check daily to find whether there is an update on the 300-540 study tool. If there is an update system, we will automatically send it to you. Therefore, we can guarantee that our 300-540 test torrent has the latest knowledge and keep up with the pace of change. Many people are worried about electronic viruses of online shopping. But you don't have to worry about our products. Our 300-540 Exam Materials are absolutely safe and virus-free. If you encounter installation problems, we have professional IT staff to provide you with remote online guidance. We always put your needs in the first place.
