ITexamReview is a convenient website to provide service for many of the candidates participating in the IT certification exams. A lot of candidates who choose to use the ITexamReview's product have passed IT certification exams for only one time. And from the feedback of them, helps from ITexamReview are proved to be effective. ITexamReview's expert team is a large team composed of senior IT professionals. And they take advantage of their expertise and abundant experience to come up with the useful training materials about F5CAB1 Certification Exam. ITexamReview's simulation test software and related questions of F5CAB1 certification exam are produced by the analysis of F5CAB1 exam outline, and they can definitely help you pass your first time to participate in F5CAB1 certification exam.

No matter in the day or on the night, you can consult us the relevant information about our F5CAB1 preparation exam through the way of chatting online or sending emails. I'm sure our 24-hour online service will not disappoint you as we offer our service 24/7 on our F5CAB1 Study Materials. And we will give you the most considerate suggestions on our F5CAB1 learning guide with all our sincere and warm heart.

F5CAB1 Authentic Exam Hub | Valid F5CAB1 Test Vce

The modern F5 world is changing its dynamics at a fast pace. To stay and compete in this challenging market, you have to learn and enhance your in-demand skills. Fortunately, with the BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) certification exam you can do this job nicely and quickly. To do this you just need to enroll in the F5 F5CAB1 Certification Exam and put all your efforts to pass the BIG-IP Administration Install, Initial Configuration, and Upgrade (F5CAB1) certification exam.

F5 BIG-IP Administration Install, Initial Configuration, and Upgrade Sample Questions (Q25-Q30):

NEW QUESTION # 25

How is a BIG-IP software upgrade typically performed?

- A. By uploading the upgrade image and applying it manually
- B. By running the upgrade from the CLI without rebooting
- C. Through an external update server
- D. Automatically when the system reboots

Answer: A

Explanation:

Upgrades are manually initiated through the Configuration utility by uploading the software image and applying it.

NEW QUESTION # 26

Refer to the exhibit.

An organization has purchased a BIG-IP license that includes all available modules but has chosen to provision only the modules they require.

The exhibit displays the current resource allocation from the System # Resource Provisioning page.

Based on the information provided, which F5 modules have been provisioned?

- **A. LTM, DNS, APM**
- B. LTM, APM
- C. DNS, APM
- D. TMM, DNS, APS

Answer: A

Explanation:

The exhibit shows the Current Resource Allocation for:

* CPU

* Disk

* Memory

In particular, the Memory Allocation bar displays the modules that are currently provisioned.

Memory is the most reliable indicator because BIG-IP allocates memory only to modules that are actively provisioned.

From the exhibit:

* MGMT (Management) - always present

* TMM (Traffic Management Microkernel) - indicates LTM is provisioned

* GTM - this label indicates that the DNS module is provisioned (GTM = Global Traffic Manager, now called DNS)

* APM - explicitly shown, indicating Access Policy Manager is provisioned

Therefore, the provisioned modules are:

* LTM (implied by TMM allocation)

* DNS/GTM

* APM

This matches Option C: LTM, DNS, APM.

NEW QUESTION # 27

Which BIG-IP feature allows you to customize traffic management?

- A. SSL Profile
- B. Route
- C. Pool
- **D. iRule**

Answer: D

Explanation:

iRules are used to define custom traffic management behavior based on user-defined conditions and actions.

NEW QUESTION # 28

A BIG-IP Administrator is using Secure Copy Protocol (SCP) to transfer a TMOS image to the BIG-IP system in preparation for an upgrade. To what directory should the file be transferred?

- A. /var/images/
- **B. /shared/images/**
- C. /local/images/

Answer: B

Explanation:

BIG-IP systems require all ISO images (base TMOS images and HotFix images) to be stored in a specific directory used for software installation:

/shared/images/

This directory:

Is the only supported location from which the BIG-IP software installation system validates and installs ISO files
Is accessible by both the GUI and TMSH installers
Has adequate storage space allocated specifically for images
Is part of the shared partition that persists across reboots
When transferring images via SCP, the administrator must copy them directly into /shared/images/ so that:

The GUI (System Software Management Available Images) can detect the image
TMSH install software image commands can reference it
Other directories such as /local/images/ or /var/images/ are not valid storage paths for software images.

NEW QUESTION # 29

For security reasons, a BIG-IP Administrator needs to specify allowable IP ranges for access to the Configuration Utility (WebUI). The exhibit shows the User Administration section of the Configuration Utility.

The administrator could not find any setting that explicitly restricts access to the Configuration Utility.

Which one of the following is a reason for that?

- **A. Restricting access to the Configuration Utility can only be done from the Command Line Interface**
- B. The administrator must restrict access by IP address for SSH, which will implicitly restrict access to the Configuration Utility
- C. To avoid locking out the administrator, recent versions of BIG-IP no longer allow restricting administrator access to the Configuration Utility by source IP address
- D. The administrator needs to switch to the "Advanced" view mode in order to display the relevant setting

Answer: A

Explanation:

The screenshot shown is from the User Administration section of the BIG-IP GUI.

This section controls:

- * Root and Admin passwords
- * SSH Access
- * SSH IP Allow settings

However, it does not contain any controls for restricting access to the WebUI (TMUI).

BIG-IP does not provide TMUI access restrictions from this part of the GUI.

Access to the web-based Configuration Utility is controlled by the httpd allow list, configured through TMSH:

```
tmsh modify /sys httpd allow { <IP/subnet> }
```

This setting is not displayed in the User Administration panel, and in many BIG-IP versions, the httpd allow list is only configurable from the CLI, not the GUI.

Therefore, the administrator cannot find the setting in the screen shown because:

- * TMUI access restriction is not located in this GUI section
- * It must be configured using `tmsh under /sys httpd allow`

This is why Option A is correct.

NEW QUESTION # 30

.....

We present our F5 F5CAB1 real questions in PDF format. It is beneficial for those applicants who are busy in daily routines. The F5CAB1 PDF QUESTIONS contains all the exam questions which will appear in the real test. You can easily get ready for the examination in a short time by just memorizing F5CAB1 Actual Questions.
