Exam JN0-452 Collection Pdf | JN0-452 Test Cram Pdf

The JN0-452 PDF is the most convenient format to go through all exam questions easily. It is a compilation of actual Juniper JN0-452 exam questions and answers. The PDF is also printable so you can conveniently have a hard copy of Juniper JN0-452 Dumps with you on occasions when you have spare time for quick revision.

Juniper Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) Sample Questions (Q42-Q47):

NEW QUESTION # 42

A network administrator is troubleshooting a connectivity issue where a client device can associate with an AP but fails the 802.1X authentication process. The administrator initiates a packet capture on the Mist dashboard.

The capture file shows EAP-Request/Identity frames from the AP and EAP-Response/Identity frames from the client, but it is followed by an EAP-Failure message from the AP.

What is the most likely cause of this failure?

- A. The RADIUS server is actively rejecting the client's identity (username).
- B. The client is using an incorrect pre-shared key.
- C. The DHCP server is not responding.
- D. The AP's Ethernet port has a duplex mismatch with the switch.

Answer: A

NEW QUESTION # 43

Click the Exhibit button.

Referring to the exhibit, which percentage of connection attempts failed on the access point named LD_RS_Support?

- A. 0
- B. 1
- C. 2
- D. 3

Answer: B

Explanation:

The 37% of Successful Connects suggest that 63% failed - however, these are spread between both LD_Testbed_MD and LD_RS_Support. If the only AP with connection issues was LD_RS_Support then the reverse math may have worked.

NEW QUESTION # 44

An administrator is troubleshooting poor location accuracy for vBLE asset tracking in a warehouse. After verifying AP placement and floorplan scale, they suspect an issue with the BLE tags themselves. They review the guidelines for supported BLE tags for use with Mist Asset Visibility.

Guidelines for BLE Beacon Tags:

- Interval Rate: 100 to 1000 milliseconds (ms)
- Power: 0 decibel milliwatt (dBm)
- MAC Address: Static

The administrator discovers the currently deployed tags are configured to transmit at a power level of -10 dBm.

How does this impact location accuracy?

- A. It has no impact, as the vBLE array can compensate for low power.
- B. The signal will be too weak for ceiling-mounted APs to reliably detect, leading to inaccurate or non-existent location data.
- C. It will cause the tag's MAC address to change frequently, preventing tracking.
- D. The transmission interval will be too slow for real-time tracking.

Answer: B

NEW QUESTION # 45

When would you choose to deploy a Juniper Mist Edge cluster instead of a single Mist Edge instance?

- A. When high availability and redundancy for tunneled traffic are critical.
- B. When you only have a few APs at the site.
- C. When you need to support more than 10,000 clients.
- D. When you want to use the Wi-Fi location service.

Answer: A

NEW QUESTION # 46

You receive a Marvis Actions alert informing you that there is a non-compliant AP at one of your sites. What should you do to correct the problem?

- A. Disconnect the Rogue AP from your Ethernet switch.
- B. Install the correct version of firmware on the AP.
- C. Replace the AP with the correct hardware model.
- D. Request an RMA.

Answer: C

Explanation:

According to the Cisco Catalyst 9800 Series Wireless Controller Software Configuration Guide2, a non-compliant AP is an AP that has a different hardware model than what is expected by the cloud configuration.

This can happen when an AP is replaced with an incorrect model or when an AP is moved to a different site group that has a different hardware model requirement. The solution is to replace the AP with the correct hardware model.
