If someone who can pass the exam, they can earn a high salary in a short time. If you decide to beat the exam, you must try our D-PST-DY-23 exam torrent, then, you will find that it is so easy to pass the exam. You only need little time and energy to review and prepare for the exam if you use our Dell PowerStore Deploy 2023 Exam prep torrent as the studying materials. So it is worthy for them to buy our product. We provide the introduction of the features and advantages of our D-PST-DY-23 Test Prep as follow so as to let you have a good understanding of our product before your purchase.

The Dell PowerStore is a modern storage platform that is designed to provide high performance, scalability, and flexibility. It is built on a foundation of industry-standard hardware and software components and is designed to support a wide range of workloads. The PowerStore platform leverages advanced technologies such as NVMe, SCM, and machine learning to provide the performance and efficiency required by modern data centers.

EMC D-PST-DY-23 (Dell PowerStore Deploy 2023) Exam is a certification exam that is designed to test the knowledge and skills of IT professionals who are responsible for implementing and managing Dell PowerStore systems in an enterprise environment. D-PST-DY-23 Exam is based on a comprehensive set of topics that cover various aspects of Dell PowerStore deployment, including architecture, configuration, installation, management, and troubleshooting. Candidates who pass the exam are recognized as experts in Dell PowerStore technology and are equipped to handle complex deployment scenarios.

## D-PST-DY-23 Reliable Test Pdf | D-PST-DY-23 Test Questions Pdf

As a result, it gives you a feeling of taking the actual test. The EMC D-PST-DY-23 desktop practice exam software runs on computers and laptops with a Windows operating system and it requires no internet. Since Itcerttest always assists its customers, you can contact our team 24/7 to address your issues.

The Dell PowerStore Deploy 2023 exam covers a wide range of topics related to Dell EMC PowerStore. D-PST-DY-23 exam includes multiple-choice questions and simulations that test the candidate's understanding of PowerStore hardware and software components, deployment and configuration best practices, and troubleshooting techniques. D-PST-DY-23 Exam also covers advanced topics such as data protection, disaster recovery, and integration with other storage technologies.

### EMC Dell PowerStore Deploy 2023 Exam Sample Questions (Q113-Q118):

#### NEW QUESTION # 113

What is the primary benefit of configuring remote replication for file storage resources in PowerStore?

- A. Ensuring data availability in case of site failures
- B. Accelerating network performance
- C. Reducing storage capacity requirements
- D. Simplifying authentication processes

Answer: A

#### NEW QUESTION # 114

##### SIMULATION

create an SMB NAS server in the PowerStore simulator using the provided information.

Here's the information that is given:

NAS and SMB computer name: payrollserver

Network Interface: BaseEnclosure-bond1

IP address: 192.168.2.20

Subnet: /24

Gateway: 192.168.2.254

VLAN: 1504

AD/DNS: 192.168.2.50

Windows domain name: company.com

Domain administrator credentials: (presumably Administrator/password)

The screenshot displays the Dell EMC PowerStore simulator interface. On the left, a 'Task' panel provides instructions for creating an SMB NAS server using the following information:

- NAS and SMB computer name: payrollserver
- Network Interface: BaseEnclosure-bond1
- IP address: 192.168.2.20
- Subnet: /24
- Gateway: 192.168.2.254
- VLAN: 1504
- AD/DNS: 192.168.2.50
- Windows domain name: company.com
- Domain administrator credentials: Administrator/password

Below the task list, it states: "When you have finished, continue to the next question." The main interface shows a dashboard for 'Cluster2' with various metrics and sections:

- OVERVIEW:** Appliances (1), Alerts (0), Watching (0).
- CAPACITY:** Free (6.1 TB), Physical (6.1 TB).
- PERFORMANCE:** Latency (203 µs), IOPS (0 KIOPS), Bandwidth (1.1 MB/s).
- Inventory:** Volume Groups (0), Volumes (0), Hosts (0), Virtual Machines (0), File Systems (0), SMB Shares (0), NFS exports (0), NAS Servers (0).
- Alerts:** 0 CRITICAL, 0 MAJOR, 0 MILD, 0 INFO. Note: "There are no Critical alerts".
- Watchlist:** "There are no items in your watchlist. Click the 'More Actions' button on a list page to add it to your watchlist."

**Answer:**

**Explanation:**

1. Navigate to NAS Servers

Go to Compute > NAS Servers.

Click Add NAS Server.

2. Configure NAS Server Settings

NAS Server Name: Enter payrollserver.

Network Interface: Select BaseEnclosure-bond1.

IP Address: Enter 192.168.2.20.

Subnet: Enter /24.

Gateway: Enter 192.168.2.254.

VLAN: Enter 1504.

AD/DNS: Enter 192.168.2.50.

Windows domain name: Enter company.com

Domain administrator credentials: Enter Administrator for the username and password for the password.

3. Add the NAS Server Click Add. Verification

After the NAS server is created, you can verify its configuration on the NAS Servers page. Check that all the settings are correct.

**Key Considerations**

**Network Connectivity:** Ensure that the network interface (BaseEnclosure-bond1) is properly configured and connected to the network with the specified VLAN.

**Active Directory Integration:** The provided domain administrator credentials will be used to join the NAS server to the Active Directory domain. Make sure these credentials are valid.

**DNS Resolution:** The AD/DNS server IP address (192.168.2.50) should be reachable from the PowerStore appliance for proper name resolution.

By following these steps, you'll successfully create an SMB NAS server with the specified configuration in the PowerStore simulator.

**NEW QUESTION # 115**

An administrator has performed the Cutover operation for an import session from a Dell EMC Unity system.

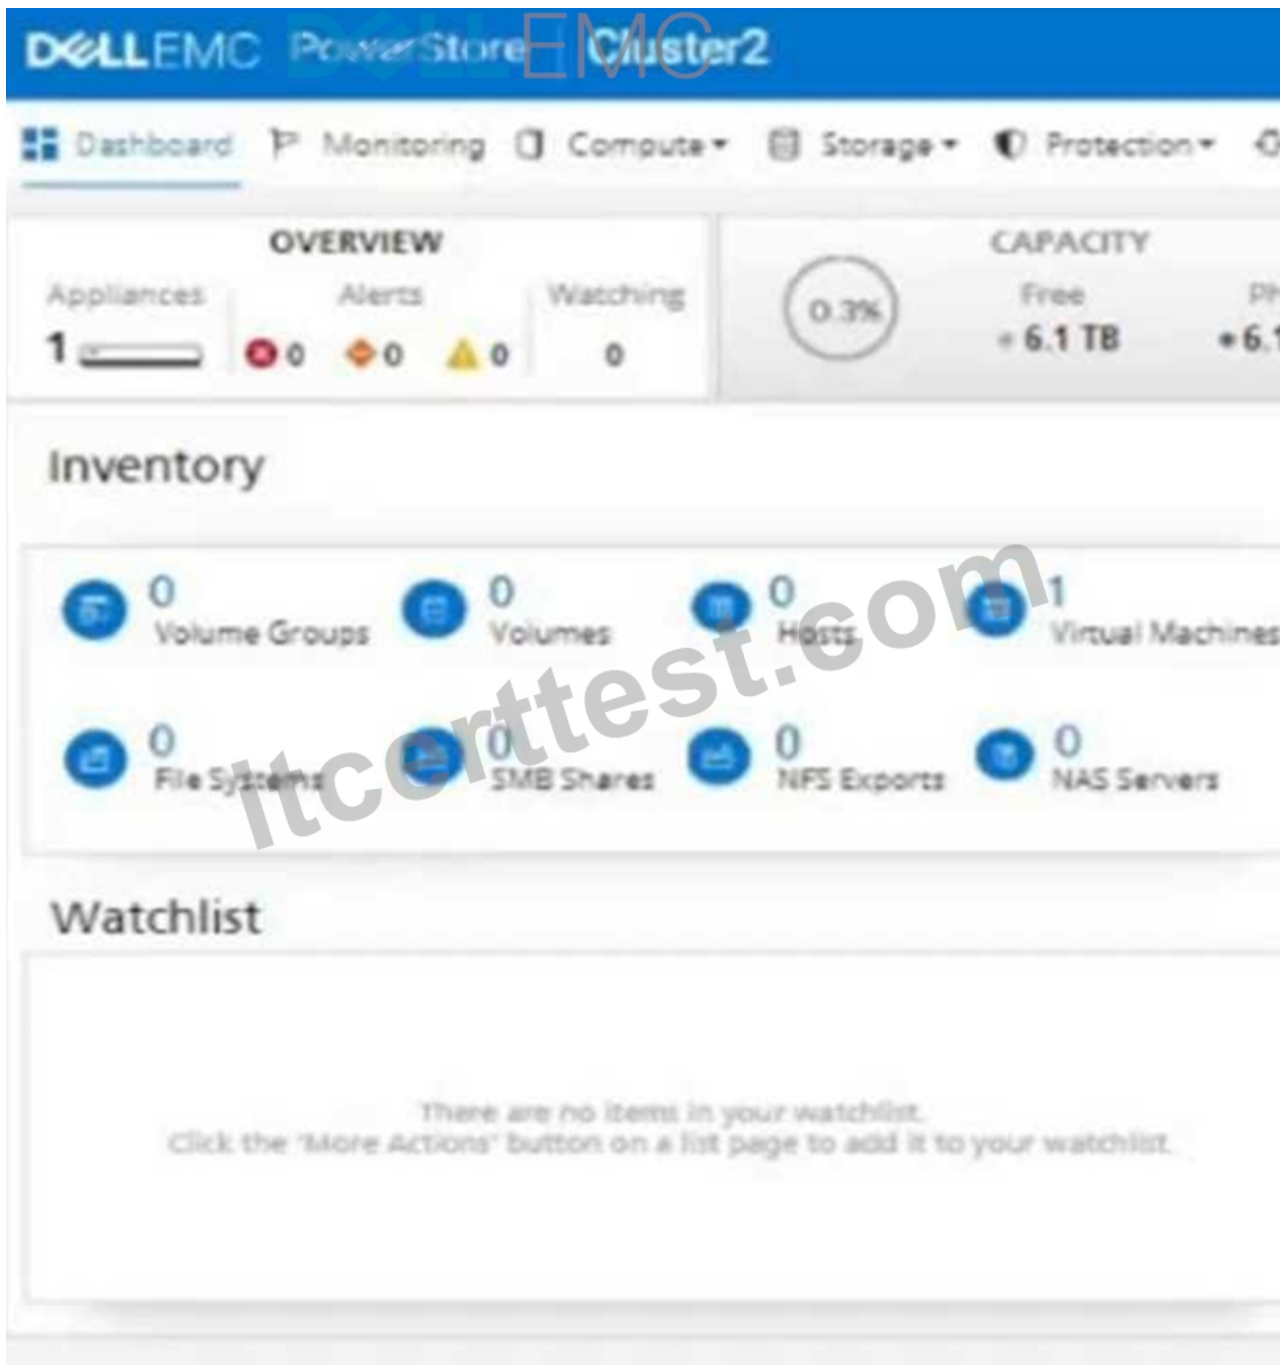

What is the result of the operation?

- A. Host is removed from the Dell EMC Unity system
- B. Host initiators are removed from the Dell EMC Unity system
- C. Imported LUN host mapping is removed from the Dell EMC Unity system
- D. Imported LUN is deleted from the Dell EMC Unity system

**Answer: C**

**NEW QUESTION # 116**

Refer to the exhibit.

An administrator is setting up a new ESXi cluster using NVMe over TCP. The administrator is given the following parameters:

Volume Details

Name: nvme-ds-01

Category: Virtualization

Application: Containers/Kubernetes

Volume Performance Policy: High

Size: 2 TB

Host Details

Name: ESXi-01

Initiator Type: NVMe Host Mappings: NVMe

Use the simulator to add the host and the volume and give the host access to the volume using the above parameters.

When you have finished, continue to the next question.

**Answer:**

Explanation:

See the steps in Explanation.

1. On the simulator, click on the Storage tab on the left sidebar. Then click on the Volumes subtab. You will see a list of existing

volumes on the cluster.

2. To create a new volume, click on the **Create** button on the top right corner. A dialog box will appear where you can enter the volume details.
3. Enter the name of the volume as `nvme-ds-01`. Select the category as **Virtualization** and the application as **Containers/Kubernetes**. These are optional fields that help you organize and identify your volumes.
4. Select the volume performance policy as **High**. This will optimize the volume for high performance and low latency. You can also customize the policy by clicking on the **Advanced** button and adjusting the settings.
5. Enter the size of the volume as **2 TB**. You can also enable thin provisioning, compression, and deduplication if you want to save space and improve efficiency. Click on the **Create** button to create the volume.
6. You will see a confirmation message that the volume has been created successfully. Click on the **Close** button to exit the dialog box. You will see the new volume in the list of volumes.
7. To add a new host, click on the **Hosts** subtab on the left sidebar. You will see a list of existing hosts on the cluster.
8. To create a new host, click on the **Create** button on the top right corner. A dialog box will appear where you can enter the host details.
9. Enter the name of the host as `ESXi-01`. Select the initiator type as **NVMe**. This will enable the host to use the NVMe over TCP protocol to access the volumes.
10. To add the host mappings, click on the **Add Mapping** button. A dialog box will appear where you can select the volume and the access type.
11. Select the volume `nvme-ds-01` from the drop-down menu. Select the access type as **NVMe**. This will map the volume to the host using the NVMe over TCP protocol. Click on the **Add** button to add the mapping.
12. You will see the mapping in the list of host mappings. You can add more mappings if you want to map more volumes to the host. Click on the **Create** button to create the host.
13. You will see a confirmation message that the host has been created successfully. Click on the **Close** button to exit the dialog box. You will see the new host in the list of hosts.
14. You have completed the task of adding the host and the volume and giving the host access to the volume using the NVMe over TCP protocol. You can verify the configuration by clicking on the host or the volume and checking the details.

#### NEW QUESTION # 117

Which network is used by the PowerStore for communication to the cluster database?

- A. IDN
- **B. ICM**
- C. ICD
- D. inter-node

**Answer: B**

#### NEW QUESTION # 118
