Fortinet FCSS - Network Security 7.6 Support Engineer Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which exchange takes care of DoS protection in IKEv2?

- A. Create_CHILD_SA
- B. IKE_Auth
- C. IKE_SA_NIT
- D. IKE_Req_INIT

Answer: D

Explanation:

The IKE_SA_INIT exchange in IKEv2 is responsible for DoS protection measures. During IKE_SA_INIT, before authentication and further exchange, the responder can use cookie challenges (per RFC 7296 and Fortinet VPN documentation). If a DoS attack

is suspected (many requests from the same source), the responder replies with a cookie. Only after the initiator returns the correct cookie does the exchange proceed, protecting the responder from state exhaustion and certain forms of DoS traffic at the handshake stage.

Answer: A

NEW QUESTION # 17

Exhibit.

```
# diagnose hardware sysinfo memory
MemTotal: 2055916 kB
MemFree: 708880 kB
Buffers: 10 kB
Cached: 641364 kB
SwapCached: 0 kB
Active: 726352 kB
Inactive: 98908 kB
```

Refer to the exhibit, which shows a partial output of diagnose hardware sysinfo memory.

Which two statements about the output are true? (Choose two.)

- A. The value indicated next to the inactive heading represents the currently unused cache page.**
- B. The I/O cache, which has 641364 kB of memory allocated to it.
- C. The user space has 708880 kB of physical memory that is not used by the system**
- D. There are 98908 kB of memory that will never be used.

Answer: A,C

Explanation:

The partial output from diagnose hardware sysinfo memory provides details on system RAM allocation.

According to Fortinet's technical documentation for memory troubleshooting and Linux memory management (which FortiOS is based on):

* MemFree is the portion of physical memory not currently allocated to any running process or kernel function. Thus, 708880 kB is available and can be immediately used by user-space programs or system operations.

* Inactive refers to pages in the memory cache that were previously in use for I/O or file system buffering but are now not actively referenced. These pages are retained in memory for quick access if needed again, but can be reclaimed for other memory operations if demand increases. The value 98908 kB here represents currently unused cache pages (inactive pages), ready for repurposing or deletion if the system requires more RAM.

* Cached represents the total amount of system memory allocated to cache, which includes both active and inactive cache pages. It does not, by itself, represent I/O cache exclusively, nor does "inactive" mean memory "will never be used" as the kernel can re-purpose inactive pages on demand.
