## ISTQB Certified Tester Usability Tester Sample Questions (Q27-Q32):

### NEW QUESTION # 27

What location is NOT suitable for conducting a usability test?

- A. A room at the place where the test participant lives or works.
- **B. A room where no action of the user can be seen or recorded by any means.**
- C. Two office rooms that are connected by a video link.
- D. A public place, such as a cafe.

### Answer: B

Explanation:

The primary goal of usability testing is to observe and record user behavior while interacting with the system.

A location where user actions cannot be seen or recorded (option A) completely undermines the test's purpose and is therefore not suitable.

While options B, C, and D are not ideal in all cases, they can still be valid settings depending on the context.

Testing in a user's natural environment (B) increases ecological validity. Remote testing via video link (C) is widely accepted. Testing in a public setting (D) can be useful for mobile apps or services intended for real-world use.

### NEW QUESTION # 28

What is good accessibility?

- A. Good usability of a software product on all devices (smart phone, computer, etc.)
- B. Good usability of a software product by people with limited knowledge of the software
- C. Good usability regardless of disturbances like bright sunlight, noise or wind
- **D. Good usability of a software product by people with limited vision, hearing, dexterity, cognition or physical mobility**

## Answer: D

Explanation:

Accessibility refers to designing products so that people with disabilities or limitations (permanent or temporary) can use them effectively. According to the Web Content Accessibility Guidelines (WCAG) and ISO standards, accessibility focuses on ensuring that users with vision, hearing, cognitive, or mobility impairments can access digital interfaces. Option D captures this intent accurately. The other options relate to general usability or responsiveness (e.g., device adaptability or user experience in noisy environments) but do not address the inclusive nature of accessibility as defined by official guidelines.

## NEW QUESTION # 29

The usability team has written a usability test report. The report has the following structure:

Executive summary (1 page)

Table of contents (1 page)

Findings and recommendations (5 pages)

Objectives (2 pages)

Purpose (2 pages)

Contacts (1 page)

Which best practice does this usability test report violate?

- A. The report misses a description of the evaluation method
- B. The report is too long
- C. The report makes use of usability jargon
- D. The report misses positive findings

## Answer: A

Explanation:

A best practice in usability reporting (based on ISO/IEC 25062:2006 - Common Industry Format for usability test reports) is to include a clear description of the evaluation method used. This includes how the test was designed, how participants were selected, what tasks were performed, and under what conditions the test was conducted. This ensures the results are credible and reproducible. The provided structure omits this essential information. While the report length is not excessive and positive findings may or may not be present, the key missing component is the method description.

## NEW QUESTION # 30

How can the approach for conducting user surveys be summarized best?

- A. Write survey plan, write schedule, select questionnaire, recruit users, analyze, communicate
- B. Write survey plan, write schedule, select questionnaire, recruit users, remind users, communicate
- C. Write survey plan, interview users and stakeholders, select questionnaire, recruit users, remind users, communicate
- D. Write survey plan, interview users and stakeholders, select questionnaire, deploy questionnaire, analyze, communicate

## Answer: D

Explanation:

Conducting user surveys involves a structured approach that ensures data collection is effective, reliable, and meaningful. The process typically starts with writing a survey plan, which defines the objectives, scope, target population, and methodology. Next, interviewing users and stakeholders is important to gather qualitative insights, refine survey questions, and align the survey with business goals and user needs.

Selecting or designing the questionnaire follows, which includes crafting clear, unbiased questions to capture the desired data. After

that, deploying the questionnaire to the recruited participants is essential; this can be done via email, online tools, or in-person, depending on the context. Once the data is collected, it must be analyzed to extract meaningful patterns, trends, and insights. Finally, communicating the findings to stakeholders completes the process by informing decision-making.

Other options miss critical steps such as deploying the questionnaire (Option C), or combine steps incorrectly (Options A and D). Importantly, the step of interviewing users and stakeholders prior to deployment ensures the survey is well-informed and targeted, enhancing the quality and relevance of data collected.

## NEW QUESTION # 31

Which of the following statements best describe Rapid Iterative Testing and Evaluation?

- A. Testing focuses on instant redesigns and confirming made changes
- B. Testing is quantitative
- C. Testing happens on a regular basis, e.g. each Monday
- D. Testing is informal and many potential users can be accessed

Answer: A

Explanation:

Rapid Iterative Testing and Evaluation (RITE) is a usability method in which usability issues are identified and addressed in short cycles. Unlike traditional usability testing, RITE allows for immediate redesigns and retesting of the improved version within the same study. The goal is to refine the design quickly based on observed usability issues. Option A confuses scheduling with methodology, B is too vague, and D inaccurately characterizes RITE as quantitative, while it is typically qualitative. Therefore, C accurately reflects the purpose and approach of RITE.
