Veeam Certified Engineer v12 Sample Questions (Q18-Q23):

NEW QUESTION # 18
For best performance when backing up NAS file shares, which component should be connected to the network as closely as possible to the source?

- A. Veeam Backup & Replication server
- B. Guest interaction proxy
- C. Mount serve
- D. Backup proxy

Answer: D

NEW QUESTION # 19
Veeam ONE has been installed and configured. The administrator needs to monitor the VMware datastore capacity. Where can this information be found?

- A. Under Business View, select VMs to see the total amount of used disk space.
- B. Under Infrastructure View, select all VMs to calculate the remaining datastore disk space.
- C. Under Business View, select Hosts to see each datastore and its disk space.
- D. Under Infrastructure View, select the Datastores group and view the disk space.

Answer: D

Explanation:
Veeam ONE is a monitoring and reporting tool for Veeam Backup & Replication, as well as virtual environments like VMware vSphere and Microsoft Hyper-V. In Veeam ONE, you can monitor the capacity of VMware datastores by using the "Infrastructure View". Within this view, there is a specific group for "Datastores" which provides comprehensive information, including the capacity and free space available on each datastore. This feature is designed to help administrators manage storage effectively and ensure they are alerted before reaching critical capacity limits.
The "Infrastructure View" provides a more direct and focused way to monitor resources like datastores compared to "Business View", which is typically used for categorizing and viewing the infrastructure based on business needs, rather than direct resource monitoring.

NEW QUESTION # 20
A number of VMs are running as interdependent applications. They need to fail over, one by one, as a group.
What method should be used to do this?

- A. Failover plan
- B. Replication plan
- C. Replica failover
- D. Planned failover

Answer: A

Explanation:
To ensure VMs running interdependent applications fail over one by one, as a group, the method to use is D:
Failover plan. In Veeam Backup & Replication, a failover plan allows for the orchestration of a group of replicas to fail over in a predefined sequence. This includes the capability to set up delays between starting each VM, which is crucial for interdependent applications that must be started in a specific order to function correctly. The failover plan ensures that dependencies among the group are respected and that the startup sequence follows the correct order, enabling a smooth and organized transition to the failover state.

NEW QUESTION # 21
On Monday, a backup administrator found out that some backup jobs were missing from a configuration. They want to roll back the configuration database to Friday's state. Which configuration restore mode should be used?

- A. Veeam Explorer for Microsoft SQL
- B. Migrate
- C. Instant SQL Recovery
- D. Restore

Answer: D

Explanation:
To roll back the configuration database to Friday's state, the backup administrator should use the
'Restore' mode available in Veeam Backup & Replication. This mode allows for the entire configuration backup to be restored, which includes the job settings and history, and brings the configuration database back to the state it was in at the time of the backup.

NEW QUESTION # 22

An engineer needs to make sure that a backup job includes both the virtual machine's disk files and the Microsoft SQL database transaction logs.
Which backup feature in Veeam Backup and Replication should be used?

- A. Application-aware processing
- B. Crash consistent mode
- C. Guest file system indexing
- D. App consistent mode

Answer: A

Explanation:
To ensure that a backup job includes both the virtual machine's disk files and the Microsoft SQL database transaction logs, Application-aware processing should be used. This feature enables Veeam Backup & Replication to create transactionally consistent backups of VMs running VSS- aware applications like Microsoft SQL Server, ensuring that both the VM disks and the SQL transaction logs are properly backed up.
