Our laTest AP-219 Quiz torrent provides 3 versions and you can choose the most suitable one for you to learn. All in all, there are many merits of our AP-219 quiz prep.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q57-Q62):

NEW QUESTION # 57

An administrator suspects that recent changes to a flow have created a defect. The administrator wants to test the flow with input data that they believe will cause the error. What can the developer do next?

- A. Open theFlow and select Attach to Live Session. Provide the Session Id. Select Attach
- B. Open the Flow, Select Debug with inputs. Provide the input values, select Run
- **C. Open the Flow, Select Debug, Provide the input values, Select Run**
- D. Open the Flow and selectAttach to Live Session and Provide the Order Number

Answer: C

NEW QUESTION # 58

A company's Salesforce org has high-scale orders enabled. During a flash sale, a customer service representative needs to service an order but it shows as a Pending Order Summary in Salesforce.

What should the customer service representative do?

- A. Use the Create Order Summary action on the Order records actions menu
- **B. The customer servicerepresentative has to wait until the Order Summary is created**
- C. Manually create the Order Summary record
- D. Import the Order from the associated Account page

Answer: B

Explanation:

The best thing for the customer service representative to do in this situation is to wait until the Order Summary is created. An Order Summary is a record that represents the financial summary of an order that is received from an external system, such as B2C Commerce or B2B Commerce. An Order Summary is created after an order is ingested into Order Management, and it triggers various flows and processes for order fulfillment and payment processing. A Pending Order Summary is a temporary record that indicates that an order has been received but not yet processed by Order Management. A customer service representative cannot service an order until it has an Order Summary record. NEW QUESTION # 59

An administrator is setting up Order Management in a development org. The administrator is using Workbench to create test orders but the corresponding Order Summaries are not being created. What could be the issue?

- A. Order Summary has been disabled in the Order Management settings in Setup
- **B. The Create Order Summary flow is not activated**
- C. The administrator did not set the "CreateOrderSummary" attribute to TRUE in the API call in workbench when posting the orders
- D. The Order object trigger is not activated

Answer: B

NEW QUESTION # 60

A company has an external system that stores client accounting data but they want to be able to search for this data within Salesforce. What three steps should the administrator take to implement this functionality?

- A. Create an Indirect Lookup field to connect to the Account
- B. Create an automated data capture (or the external system)
- C. Create an External Object for each table of accounting data in the external system
- D. Create an External Data Source pointing to the external system's database
- E. Create an automated import of the external data using the Job Scheduler

Answer: A,C,D

Explanation:

Three steps that the administrator should take to implement this functionality are:

Create an External Data Source pointing to the external system's database. An External Data Source is a type of metadata that defines the connection and authentication information for an external system that stores data outside of Salesforce. The administrator can create an External Data Source using the Lightning Connect OData 2.0 or 4.0 adapters, which support read-only access to data in relational databases.

Create an External Object for each table of accounting data in the external system. An External Object is a type of custom object that maps to a table in an external system. The administrator can create an External Object for each table of accounting data that they want to access from Salesforce, and define its fields and relationships accordingly.

Create an Indirect Lookup field to connect to the Account. An Indirect Lookup field is a type of custom field that links a child External Object record to a parent standard or custom object record. The administrator can create an Indirect Lookup field on the External Object that references the Account object, and specify the external column name and value that match the Account ID.

NEW QUESTION # 61

Where should a service agent go first to initiate changes related to an Order in Order Management?

- A. Order Details
- B. Change Order Details
- C. Fulfillment Order Details
- D. Order Summary Details

Answer: D

Explanation:

A service agent should go first to the Order Summary Details page to initiate changes related to an order in Order Management. The Order Summary Details page provides a global view of the entire order lifecycle, including order capture, fulfillment, shipping, payment, invoicing, and service. From this page, a service agent can access various actions and flows to process changes such as cancellations, returns, exchanges, reshipments, refunds, and discounts. The service agent can also view related records such as Order, Fulfillment Orders, Shipments, Invoices, Credit Memos, and Change Orders.
