Considering all customers' sincere requirements, H12-821_V1.0 test question persist in the principle of "Quality First and Clients Supreme" all along and promise to our candidates with plenty of high-quality products, considerate after-sale services as well as progressive management ideas. Numerous advantages of H12-821_V1.0 training materials are well-recognized, such as 99% pass rate in the exam, free trial before purchasing, secure privacy protection and so forth. From the customers' point of view, our H12-821_V1.0 Test Question put all candidates' demands as the top priority. We treasure every customer' reliance and feedback to the optimal H12-821_V1.0 practice test.

The H12-821_V1.0 exam covers a wide range of topics related to data communication core technology, including network architecture, routing protocols, MPLS VPN technology, and network security. H12-821_V1.0 exam is designed to test candidates' abilities to design, implement, and troubleshoot complex data communication networks using Huawei products and solutions.

Huawei H12-821_V1.0 (HCIP-Datacom-Core Technology V1.0) Certification Exam is an industry-recognized certification that validates the skills and knowledge of professionals in the field of data communication. H12-821_V1.0 Exam is designed to test the candidate's ability to install, configure, and troubleshoot data communication networks using Huawei's core technology.

Huawei H12-821_V1.0 exam is a three-hour test that consists of 60 multiple-choice questions. H12-821_V1.0 exam is administered by Huawei and can be taken at any of the authorized Huawei testing centers worldwide. H12-821_V1.0 exam is available in both English and simplified Chinese languages. The passing score for the exam is 600 out of 1000, and the result is valid for three years.

H12-821_V1.0 Reliable Exam Syllabus - New Study H12-821_V1.0 Questions

HCIP-Datacom-Core Technology V1.0 Practice exams of Exams4Collection i.e. desktop software and web-based are customizable and you can attempt them for multiple times. These practice exam save progress report of each attempt so you can assess it to find and overcome mistakes. As mentioned earlier, these HCIP-Datacom-Core Technology V1.0 (H12-821_V1.0) practice exams can be customized according to your requirements. You can change their time and numbers of HCIP-Datacom-Core Technology V1.0 (H12-821_V1.0) dumps questions as you want.

Huawei HCIP-Datacom-Core Technology V1.0 Sample Questions (Q1247-

Q1252):

NEW QUESTION # 1247

Regarding the command of OSPF route aggregation, which description is correct? (Multiple choice)

- A. not-advertise is the missing first parameter of the abr-summary command, that is, if the abr-summary command does not specify advertisement, the default is not -advertis
- B. Advertise is the missing first parameter of the abr-summary command, that is, if the abr-summary command does not specify not-advertise, the default is advertise
- C. The asbr-summary command is a command in OSPF view
- D. The abr-summary command is a command in the OSPF area view

Answer: B,C,D

NEW QUESTION # 1248

Without a prior version check, an engineer configures IGMP snooping on a device and the version of IGMP snooping is earlier than the IGMP versions on user hosts. In this case, which of the following situations will occur?

- A. The IGMP snooping version of the device is automatically degraded, and users can receive multicast data properly.
- B. Users cannot receive multicast data because the device forwards received IGMP Report messages only to router ports and does not generate group member ports or forwarding entries.
- C. Users cannot receive multicast data, but the device generates forwarding entries after receiving IGMP Report messages.
- D. The IGMP versions of the hosts are automatically upgraded, and users can receive multicast data properly.

Answer: B

Explanation:

* IGMP Version Mismatch

* If the IGMP snooping version on the device is earlier than the IGMP version on user hosts, the device may fail to parse IGMP Report messages correctly. As a result, the device forwards these messages only to router ports without generating group member ports or forwarding entries.

* Consequently, users cannot receive multicast data.

* HCIP-Datacom-Core Reference

* Multicast and IGMP snooping behaviors under mismatched conditions are described in the multicast configuration chapters.

NEW QUESTION # 1249

STAs stay on different subnets before and after Layer 3 roaming. To enable the STAs to access the original network after roaming, network engineers need to configure user traffic to be forwarded to the original subnet over a CAPWAP tunnel.

- A. FALSE
- B. TRUE

Answer: B

Explanation:

In Layer 3 roaming scenarios, STAs (stations) remain on different subnets before and after roaming. To ensure that user traffic reaches the original subnet, it must be tunneled back over a CAPWAP tunnel. This technique prevents disruptions in communication and enables seamless roaming. Huawei's Layer 3 roaming design guidelines emphasize the use of CAPWAP tunnels for user traffic forwarding.

NEW QUESTION # 1250

When configuring dual-link hot backup, the engineer configures the CAPWAP heartbeat detection interval to be 20 seconds, and enables the dual-link backup function, then the time when the AP detects that the primary link times out and performs active-standby switchover?

- A. 75 seconds
- B. 90 seconds
