High Pass-Rate FCP_FMG_AD-7.6 Trustworthy Dumps | Latest FCP_FMG_AD-7.6 Dumps and Authorized FCP - FortiManager 7.6 Administrator Exam Certification

About the oncoming FCP_FMG_AD-7.6 exam, every exam candidates are wishing to utilize all intellectual and technical skills to solve the obstacles ahead of them to go as well as it possibly could. So the pending exam causes a panic among the exam candidates. The help of our FCP_FMG_AD-7.6 Exam prepare is just in time. In the present posture, our FCP_FMG_AD-7.6 study materials are your best choice. We provide you with excellent prepare materials for you to pass the exam and get the certification.

Fortinet FCP - FortiManager 7.6 Administrator Sample Questions (Q36-Q41):

NEW QUESTION # 36

An administrator receives the import report after importing policies into the policy package layer.

```
Start to import config from device(BR1-FGT-1) vdom(root) to Adom(My_ADOM), package(BR1-FGT-1)
"firewall address",SKIPPED,"(name=all, oid=2490, DUPLICATE)"
"firewall policy",SUCCESS,"(name=1, oid=3632, new object)"
"firewall profile-protocol-options",SKIPPED,"(name=default, oid=3491, DUPLICATE)"
"firewall schedule recurring",SKIPPED,"(name=always, oid=3479, DUPLICATE)"
"firewall service category",SKIPPED,"(name=General, oid=2537, DUPLICATE)"
"firewall service custom",SKIPPED,"(name=ALL, oid=2547, DUPLICATE)"
"firewall ssh local-ca",SKIPPED"(name=Fortinet_SSH_CA, oid=3488, reason=manually)"
"firewall ssh local-ca",SKIPPED"(name=Fortinet_SSH_CA_Untrusted, oid=3489, reason=manually)"
"firewall ssl-ssh-profile",SKIPPED,"(name=no-inspection, oid=3585, DUPLICATE)"
```

Based on the import report, how did FortiManager handle the profile-protocol-options object named default?

- A. FortiManager updated the duplicate value in the FortiGate database.
- **B. FortiManager did not update its database with the value.**
- C. FortiManager created a new service category in its database.
- D. FortiManager deleted the duplicate value from its database.

Answer: B

Explanation:

The import report shows that the firewall profile-protocol-options object named default was SKIPPED due to being a DUPLICATE. This means FortiManager did not update its database with the imported object because an identical object already exists. FortiManager avoids importing duplicates to prevent redundancy and potential conflicts.

NEW QUESTION # 37

An administrator configures a new BGP peer in the FortiManager device-level database of FortiGate. They reinstall the policy package to the managed FortiGate device without any errors. However, when the administrator logs in to FortiGate, they do not see

the BGP configuration changes.

What is the most likely reason why FortiManager did not push the BGP peer changes to FortiGate?

- A. Fortigate has a BGP template assigned on the FortiManager database.
- B. The administrator must use the Install Wizard and select Install device settings only to push BGP settings
- C. The administrator must run a sanity check on FortiManager to make sure the database is not corrupted.
- D. The FortiGate firmware version is different from the FortiManager ADOM version.

Answer: A

Explanation:

If a BGP template is assigned to the FortiGate device on FortiManager, device-level BGP configurations made directly in the device-level database are overridden by the template settings, so the changes do not get pushed to the device.

NEW QUESTION # 38

An administrator configures a new BGP peer in the FortiManager device-level database of FortiGate. They reinstall the policy package to the managed FortiGate device without any errors.

However, when the administrator logs in to FortiGate, they do not see the BGP configuration changes. What is the most likely reason why FortiManager did not push the BGP peer changes to FortiGate?

- A. Fortigate has a BGP template assigned on the FortiManager database.
- B. The administrator must use the Install Wizard and select Install device settings only to push BGP settings
- C. The administrator must run a sanity check on FortiManager to make sure the database is not corrupted.
- D. The FortiGate firmware version is different from the FortiManager ADOM version.

Answer: A

Explanation:

If a BGP template is assigned to the FortiGate device on FortiManager, device-level BGP configurations made directly in the device-level database are overridden by the template settings, so the changes do not get pushed to the device.

NEW QUESTION # 39

Refer to the exhibit.

FortiManager script

Create New Script 0/225

Type: CLI Script

Run script on: Device Database

Validate on change:

Validation device platform: FortiGate-VM64

Script details: Search... ↑ ↓

```
1 config router prefix-list
2 edit public
3 config rule
4 edit 1
5 set prefix 0.0.0.0/0
6 set action permit
7 next
8 edit 2
9 set prefix 8.8.8.8/32
10 set action deny
11 end
```

Format CLI script Revert All Changes

Advanced Device Filters >

Which two results occur if you run the script using the Device Database option? (Choose two.)

- A. The administrator must install these changes on a managed device using the Install Wizard.
- B. The script history shows the successful installation of the script on the remote FortiGate.
- C. The successful execution of a script on the Device Database creates a new revision history.
- D. The device Config Status is tagged as Modified.

Answer: A,D

Explanation:

Running a script on the Device Database marks the configuration as modified but does not immediately apply changes to the device. The administrator must use the Install Wizard to push and install these changes from the Device Database onto the managed device.

NEW QUESTION # 40

A service provider administrator has assigned a global policy package to a managed customer ADOM named My_ADOM. The customer administrator has access only to My_ADOM. How can the customer administrator edit the global header policy of the global policy package?

- A. The customer administrator can edit the header policy by using workflow mode on the global ADOM and My_ADOM.
- B. The service provider administrator can unlock the global policy from the global ADOM to authorize changes to the customer administrator.
- C. The customer administrator can edit the header policy by using workspace mode on the global ADOM.
- D. The customer administrator cannot edit the global header policy; only the service provider administrator can make changes from the global ADOM.

Answer: D

Explanation:

The global policy package is managed only from the global ADOM by the service provider administrator. Customer administrators with access solely to their ADOM (My_ADOM) cannot edit the global header policy; such changes must be made by the service provider administrator in the global ADOM.

NEW QUESTION # 41

.....

As you can see that on our website, we have free demos of the FCP_FMG_AD-7.6 study materials are freebies for your information. In case you are tentative about their quality, we give these demos form which you could get the brief outline and questions closely related with the FCP_FMG_AD-7.6 Exam Materials. And it is quite easy to free download the demos of the FCP_FMG_AD-7.6 training guide, you can just click on the demos and input your email than you can download them in a second.
