Test Palo Alto Networks NetSec-Pro Pattern - Training NetSec-Pro Tools

Our reliable NetSec-Pro question and answers are developed by our experts who have rich experience in the fields. Constant updating of the NetSec-Pro prep guide keeps the high accuracy of exam questions thus will help you get use the NetSec-Pro exam quickly. During the exam, you would be familiar with the questions, which you have practiced in our NetSec-Pro question and answers. And our NetSec-Pro exam questions are so accurate and valid that the pass rate is high as 99% to 100%. That's the reason why most of our customers always pass NetSec-Pro exam easily.

The price for NetSec-Pro study materials is reasonable, no matter you are a student at school or an employee in the company, you can afford it. In addition, NetSec-Pro exam dumps are compiled by skilled experts, and therefore the quality can be guaranteed. You can receive the download link and password for NetSec-Pro Exam Dumps within ten minutes after payment. If you don't receive, you can contact us, and we will solve that for you. We are pass guarantee and money back guarantee, and if you fail to pass the exam, we will return your money.

Palo Alto Networks certification NetSec-Pro exam test software

With regard to the Internet, if you use our NetSec-Pro study materials in a network environment, then you can use our products in a non-network environment. NetSec-Pro learning guide guarantee that you can make full use of all your free time to learn, if you like. The reason why we emphasize this is that we know you have a lot of other things to do. Many users stated that they can only use fragmented time to learn. Experts at NetSec-Pro practice prep also fully considered this point.

Palo Alto Networks NetSec-Pro Exam Syllabus Topics:

Topic	Details

Topic 1	• Connectivity and Security: This part measures the skills of network engineers and security analysts in maintaining and configuring network security across on-premises, cloud, and hybrid environments. It covers network segmentation, security and network policies, monitoring, logging, and certificate management. It also includes maintaining connectivity and security for remote users through remote access solutions, network segmentation, security policy tuning, monitoring, logging, and certificate usage to ensure secure and reliable remote connections.
Topic 2	• Infrastructure Management and CDSS: This section tests the abilities of security operations specialists and infrastructure managers in maintaining and configuring Cloud-Delivered Security Services (CDSS) including security policies, profiles, and updates. It includes managing IoT security with device IDs and monitoring, as well as Enterprise Data Loss Prevention and SaaS Security focusing on data encryption, access control, and logging. It also covers maintenance and configuration of Strata Cloud Manager and Panorama for network security environments including supported products, device addition, reporting, and configuration management.
Topic 3	• GFW and SASE Solution Maintenance and Configuration: This domain evaluates the skills of network security administrators in maintaining and configuring Palo Alto Networks hardware firewalls, VM-Series, CN-Series, and Cloud NGFWs. It includes managing security policies, profiles, updates, and upgrades. It also covers adding, configuring, and maintaining Prisma SD-WAN including initial setup, pathing, monitoring, and logging. Maintaining and configuring Prisma Access with security policies, profiles, updates, upgrades, and monitoring is also assessed.
Topic 4	• NGFW and SASE Solution Functionality: This part assesses the knowledge of firewall administrators and network architects on the functions of various Palo Alto Networks firewalls including Cloud NGFWs, PA-Series, CN-Series, and VM-Series. It covers perimeter and core security, zone security and segmentation, high availability, security and NAT policy implementation, as well as monitoring and logging. Additionally, it includes the functionality of Prisma SD-WAN with WAN optimization, path and NAT policies, zone-based firewall, and monitoring, plus Prisma Access features such as remote user and network configuration, application access, policy enforcement, and logging. It also evaluates options for managing Strata and SASE solutions through Panorama and Strata Cloud Manager.

Palo Alto Networks Network Security Professional Sample Questions (Q30-Q35):

NEW QUESTION # 30
Which AI-powered solution provides unified management and operations for NGFWs and Prisma Access?

- A. Strata Cloud Manager (SCM)
- B. Prisma Access Browser
- C. Panorama
- D. Autonomous Digital Experience Manager (ADEM)

Answer: A

Explanation:
Strata Cloud Manager (SCM) offers a cloud-based unified management plane for both NGFWs and Prisma Access, enabling consistent policy enforcement, simplified management, and AI-driven operational insights.
"Strata Cloud Manager provides a single interface for unified management of NGFWs and Prisma Access, leveraging AI to optimize security operations and streamline workflows." (Source: Strata Cloud Manager Overview) Unlike Panorama, which is an on-premises management solution, SCM delivers cloud-based, AI-driven capabilities for centralized oversight.

NEW QUESTION # 31
A network security engineer needs to implement segmentation but is under strict compliance requirements to place security enforcement as close as possible to the private applications hosted in Azure. Which deployment style is valid and meets the requirements in this scenario?

- A. On a PA-Series NGFW, configure several Layer 3 zones with Layer 3 interfaces assigned to logically segment the

network.
- B. On a VM-Series NGFW, configure several Layer 3 zones with Layer 3 interfaces assigned to logically segment the network.
- C. On a PA-Series NGFW, configure several Layer 2 zones with Layer 2 interfaces assigned to logically segment the network.
- D. On a VM-Series NGFW, configure several Layer 2 zones with Layer 2 interfaces assigned to logically segment the network.

Answer: B

Explanation:
In cloud environments like Azure, theVM-Series NGFWis deployed to createLayer 3 segmentation zones closest to the application workloads.
"In Azure, deploy VM-Series firewalls in Layer 3 mode to enforce security policies closest to private applications, meeting strict compliance and segmentation requirements." (Source: VM-Series in Public Clouds) Layer 3 segmentation ensures security policies are enforced at the right boundary to isolate traffic within Azure's virtual networks.

NEW QUESTION # 32
A network security engineer wants to forward Strata Logging Service data to tools used by the Security Operations Center (SOC) for further investigation. In which best practice step of Palo Alto Networks Zero Trust does this fit?

- A. Standards and Designs
- B. Report and Maintenance
- C. Map and Verify Transactions
- D. Implementation

Answer: B

Explanation:
The"Report and Maintenance"step of the Zero Trust model emphasizes ongoing monitoring, analysis, and reporting to ensure the environment remains secure over time.
"The Report and Maintenance phase includes continuous monitoring, log forwarding, and sharing of security telemetry to third-party tools to maintain and validate Zero Trust implementation." (Source: Zero Trust Best Practices) By forwarding logs to SOC tools, the engineer ensures comprehensive visibility and proactive threat hunting.

NEW QUESTION # 33
Which component of NGFW is supported in active/passive design but not in active/active design?

- A. Configuring ARP load-sharing on Layer 3
- B. Using a DHCP client
- C. Route-based redundancy
- D. Single floating IP address

Answer: D

Explanation:
Single floating IP address(also known as a floating IP or shared IP) is supported only in anactive/passiveHA pair. In active/active HA, both firewalls are forwarding traffic simultaneously and thus do not share a single floating IP.
"In active/passive HA, a single floating IP address is used for seamless failover. Active/active HA requires separate IP addresses and does not support a single floating IP." (Source: Active/Passive vs. Active/Active HA) Thissimplifies failoverin active/passive deployments by using a single shared IP that moves to the active peer upon failover.

NEW QUESTION # 34
What occurs when a security profile group named "default" is created on an NGFW?

- A. It allows traffic to bypass all security checks by default.
- B. It is automatically applied to all new security rules.
- C. It only applies to traffic that has been dropped due to the reset client action.

- D. It negates all existing security profiles rules on new policy.

Answer: B

Explanation:
A security profile group named"default"is automatically applied to all new security rules unless a specific profile group is explicitly configured.
"If a security profile group named 'default' exists, it will be automatically applied to any newly created security policy rules to ensure consistent protection." (Source: Security Profile Groups) This behavior ensures that newly created policies are always protected by default security profiles, minimizing human error.

NEW QUESTION # 35

......

To take a good control of your life, this NetSec-Pro exam is valuable with high recognition certificate. Actually getting a meaningful certificate by passing related NetSec-Pro exam is also becoming more and more popular. So finding the perfect practice materials is pivotal for it. You may be constrained by a number of factors like lack of processional skills, time or money to deal with the practice exam ahead of you. While our NetSec-Pro Study Materials can help you eliminate all those worries one by one.
