VMware Valid 2V0-16.25 Exam Camp Pdf - First-Grade Valid 2V0-16.25 Test Pattern and Pass-Sure VMware vSphere Foundation 9.0 Administrator Practice Online

The passing rate of our 2V0-16.25 exam materials are very high and about 99% and so usually the client will pass the exam successfully. But in case the client fails in the exam unfortunately we will refund the client immediately in full at one time. The refund procedures are very simple if you provide the 2V0-16.25 exam proof of the failure marks we will refund you immediately. If any questions or doubts exist, the client can contact our online customer service or send mails to contact us and we will solve them as quickly as we can. We always want to let the clients be satisfied and provide the best 2V0-16.25 Test Torrent and won't waste their money and energy.

VMware vSphere Foundation 9.0 Administrator Sample Questions (Q51-Q56):

NEW QUESTION # 51

An administrator enables the VMware Cloud Foundation (VCF) Operations orchestrator Plug-in for VMware vSphere Web Client service on a VCF Operations orchestrator appliance.

How many vSphere instances can be integrated in the vSphere Client through the VCF Operations orchestrator plug-in?

- A. 0

- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

The VCF Operations Orchestrator Plug-in for VMware vSphere Web Client allows orchestration workflows directly in the vSphere Client.

* However, only one vSphere instance can be integrated at a time with the vSphere Client via this plug-in.

* This limitation ensures a consistent, single orchestration endpoint per vSphere Client environment.

Other options (8, 10, 15) apply to scaling of vCenter or data sources but not to the Orchestrator Plug-in integration.

NEW QUESTION # 52

What is the benefit of enabling lockdown mode on VMware ESX hosts?

- A. Increases CPU and memory resources available to virtual machines (VMs).
- B. Simplifies the management of virtual machines.
- C. Improves network performance.
- **D. Restricts direct access to the ESX host, enhancing security.**

Answer: D

Explanation:

Lockdown Mode on ESXi hosts is a security feature that restricts direct logins to the ESXi host.

* Once enabled, administrators must manage the host through vCenter Server instead of direct DCUI/SSH access (except for exception users).

* This prevents unauthorized local access and improves overall security compliance.

Other options:

- * A. Improves network performance# Not related.
- * C. Increases CPU/memory for VMs# Not related.
- * D. Simplifies VM management# It actually makes direct management more restricted.

NEW QUESTION # 53

An administrator is following the concept of least privilege and must configure permissions in a vSphere environment granting members of the group corp\VM-Managers the following abilities:

- * Power on/off virtual machines
- * Open consoles
- * Create snapshots

Which out-of-the-box role satisfies these access control requirements?

- A. Virtual Machine User
- B. Virtual Machine Console User
- **C. Virtual Machine Power User**
- D. Administrator

Answer: C

Explanation:

The requirement is to follow least privilege while granting specific VM operations:

- * Power on/off virtual machines
- * Open consoles
- * Create snapshots

The Virtual Machine Power User role is the correct out-of-the-box role, as it includes all these privileges without granting unnecessary administrative access.

Other roles:

- * Administrator (A): Grants full environment control # too broad.
- * Virtual Machine Console User (B): Limited to console access, cannot power on/off or snapshot.
- * Virtual Machine User (C): Can interact with VMs but lacks snapshot privileges.

NEW QUESTION # 54

An administrator is tasked to configure VMware Cloud Foundation (VCF) Operations alerts to notify only relevant stakeholders when alerts trigger.

Which configuration step will satisfy the requirement?

- A. Configure notification to write a file to an output folder.
- **B. Configure notification to specific alert recipients.**
- C. Configure notification to use generic contact information.
- D. Configure notification for only critical alerts.

Answer: B

Explanation:

In VCF Operations, alerts can be configured with notification settings. To ensure only relevant stakeholders receive alerts:

- * You assign specific recipients to notifications.
- * This avoids alert fatigue and ensures teams only see alerts they are responsible for.

Other options:

- * A. Write to file # Not for stakeholder notifications.
- * B. Only critical alerts # Reduces volume, but still not targeted to relevant recipients.
- * D. Generic contact info # Sends to broad groups, not selective.

NEW QUESTION # 55

In VMware Cloud Foundation (VCF) Operations for Logs, where does an administrator visualize the value range of a field?

- A. Click the pencil in the Manage Fields pane.
- B. Click on the field in Manage Fields.
- **C. Click on the field in the Events table.**
- D. Click on the field in the Field Table.

Answer: C

Explanation:

In VCF Operations for Logs, administrators can analyze logs using queries, fields, and charts. A key feature is the ability to view the value range of a specific field.

- * When a log query is executed, results appear in the Events table.
- * Each field shown in the Events table is interactive.
- * By clicking on a field in the Events table, administrators can drill down into the data to visualize its value distribution (range), typically in the form of a histogram or grouped data set.

This provides insight into what values are present and how frequently they occur, which is useful for troubleshooting, anomaly detection, and refining queries.

Why not the other options?

- * A. Click the pencil in the Manage Fields pane # Used to edit or extract fields, not visualize ranges.
- * C. Click on the field in Manage Fields # Displays field definitions and settings, not real-time value ranges.
- * D. Click on the field in the Field Table # The Field Table lists defined fields but does not provide value range visualization.
