一番優秀ATLASSIAN ACP-120 | 高品質なACP-120試験情報試験 | 試験の準備方法Jira Cloud Administrator対応問題集

もしGoShikenのACP-120問題集を利用してからやはりACP-120認定試験に失敗すれば、あなたは問題集を購入する費用を全部取り返すことができます。これはまさにGoShikenが受験生の皆さんに与えるコミットメントです。優秀な試験参考書は話すことに依頼することなく、受験生の皆さんに検証されることに依頼するので、GoShikenの参考資料は時間の試練に耐えることができます。GoShikenは現在の実績を持っているのは受験生の皆さんによって実践を通して得られた結果です。真実かつ信頼性の高いものだからこそ、GoShikenの試験参考書は長い時間にわたってますます人気があるようになっています。

ATLASSIAN Jira Cloud Administrator 認定 ACP-120 試験問題 (Q47-Q52):

質問 # 47

Your project is configured as follows:

- several issue types, components and versions
- a single, simple unique workflow - OPEN --> IN PROGRESS --> DONE
- Fix Version(s) can be set on the transition to IN PROGRESS
- Component(s) are required and new issues are automatically assigned to component leads
- all component leads are members of the Administrators project role

Now you have to implement the following requirements:

- an affected version needs to be added to the issue upon creation
- only component leads can choose or add a fix version when the issue is transitioned to IN PROGRESS What two configurations are prerequisites to meet the requirements? (Choose two.)

- A. Ensure that only members of the Administrators project role have Resolve Issues permission.
- B. Add a condition limiting execution to the Administrators role to the IN PROGRESS transition and require Fix Version/s to be set.
- C. Ensure Component/s, Affects Versions/s, and Fix Version/s are required in the used field configurations.
- D. Add a condition limiting execution to the IN PROGRESS transition to the current assignee.
- E. Ensure Affects Versions/s is required in the used field configurations and on the correct screen.

正解: A、D

質問 # 48

A team of technical writers works in the WRITE project. The project uses a single, shared workflow.

To better match the team's way of working they request a workflow change: The initial status of their project's workflow should be changed from Open to Awaiting Inspiration.

- You navigate to the Workflows section of the administration, update the Name of the status in the workflow designer and publish your change.

What are two implications of this change? (Choose two.)

- A. Transitions to the Awaiting Inspiration status will fail until the post functions for those transitions are updated.
- B. The Open Status will be changed to Awaiting Inspiration in all workflows using that status.
- C. Awaiting Inspiration will be created as a new Status in Jira.
- D. Filters and Gadgets that referred to the Open status by name will be broken.
- E. The workflow scheme for the WRITE project will need to be published before the change takes effect.

正解: C、E

質問 # 49

A project manager wants to stay aware of the support requests that are being raised in his project.

He wants to know if:

- the team is able to handle the number of issues that are being raised in the project
- there are team members who work on more than 2 issues at any given time
- there are sets of issues that need significantly more time to resolve when compared to others over time Which three gadgets will show him the information he needs? (Choose three.)

- A. Two Dimensional Filter Statistics
- B. Labels
- C. Resolution Time
- D. Created vs. Resolved Chart
- E. Activity Stream

正解: A、B、E

質問 # 50

On the Bulk Operation screen, Taylor is unable to choose the Delete Issues bulk action. What does Taylor definitely need?

- A. Organization admin privileges
- B. Project permissions
- C. Global permissions
- D. Jira administration privileges
- E. Project administration privileges

正解: B

解説:

The inability to choose the Delete Issues bulk action on the Bulk Operation screen indicates that Taylor lacks the necessary

permission to delete issues in the project. The Delete Issues permission, which is a project-level permission defined in the project's permission scheme, is required for this action. Therefore, Taylor definitely needs project permissions (Option D).

* Explanation of the Correct Answer (Option D):

* The Delete Issues permission allows users to delete issues, including via bulk operations. This permission is granted through the project's permission scheme and is specific to the project containing the issues. If Taylor cannot select the Delete Issues bulk action, she lacks this permission for the project.

* Exact Extract from Documentation:

Delete Issues permission

The Delete Issues permission allows users to delete issues, either individually or via bulk operations. This permission is granted via the project's permission scheme.

To perform bulk operations:

* Run a filter to select issues.

* On the Bulk Operation screen, choose an action (e.g., Delete Issues). Note: Users must have the relevant permission (e.g., Delete Issues) for all selected issues to see the action in the bulk operation wizard. To check permissions:

* Go to Project settings > Permissions.

* Verify which users, groups, or roles have the Delete Issues permission. (Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Why This Fits: The Delete Issues permission is a project-level permission, and granting it to Taylor will enable her to choose the Delete Issues bulk action, making project permissions (Option D) the correct answer.

* Why Other Options Are Incorrect:

* Organization admin privileges (Option A):

* Organization admins manage Atlassian organization settings, such as user access and billing. They do not directly control project-level permissions like Delete Issues.

* Extract from Documentation:

Organization admins manage user access and organization settings. Project-specific actions, like deleting issues, are controlled by project permissions.

(Source: Atlassian Support Documentation, "Manage your Atlassian organization")

* Jira administration privileges (Option B):

* Jira administrators manage global settings, such as schemes and user management. While they can modify permission schemes, the Delete Issues permission is project-specific and does not require Jira admin privileges to grant or use.

* Extract from Documentation:

Jira administrators can modify permission schemes, but the Delete Issues permission is applied at the project level and does not require admin privileges to use.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Global permissions (Option C):

* Global permissions (e.g., Administer Jira, Create Projects) control system-wide actions, not project-specific actions like deleting issues. The Delete Issues permission is project-level, not global.

* Extract from Documentation:

Global permissions control system-wide actions, such as administering Jira or sharing filters. Project permissions, like Delete Issues, are specific to projects.

(Source: Atlassian Support Documentation, "Manage global permissions")

* Project administration privileges (Option E):

* Project administration privileges (via the Administer Projects permission) allow users to manage project settings, such as components and permission schemes. However, deleting issues is an issue-level action that requires the Delete Issues permission, not administrative privileges.

* Extract from Documentation:

The Administer Projects permission allows managing project settings. Deleting issues requires the Delete Issues permission, which is separate.

(Source: Atlassian Support Documentation, "Manage permissions in Jira Cloud")

* Additional Notes:

* To resolve the issue, check Taylor's permissions in Project settings > Permissions and ensure she has the Delete Issues permission, either directly, via a group, or via a project role.

* If the issues in the bulk operation span multiple projects, Taylor needs the Delete Issues permission for all relevant projects.

Atlassian Support Documentation: Manage global permissions

Which statement is true about changing a project's key?

- A. The old project key can be reused for a new project.
- B. Unshared project schemes will be automatically renamed to reflect the new project key.
- C. Users have to update issue filters referencing the old project key.
- D. External links to issues in that project need to be updated to match the new project key.
- E. Internal Jira links referencing an old key will continue to work.

正解： E
