

# OGA-032 Practice Tests, Valid Test OGA-032 Braindumps

We are professional in this career to help all our worthy customers to obtain the OGA-032 certification for years. You can get prepared with our OGA-032 exam materials only for 20 to 30 hours before you go to attend your exam. we can claim that you will achieve guaranteed success with our OGA-032 Study Guide for that our high pass rate is unmatched 98% to 100%. And all the warm feedback from our clients proved our strength, you can totally rely on us with our OGA-032 practice quiz!

The ArchiMate 3 Part 2 Exam consists of multiple choice questions that evaluate the candidate's knowledge of the ArchiMate 3 modeling language. OGA-032 exam is designed to test the candidate's understanding of the language's key concepts, principles, and techniques. OGA-032 Exam also evaluates the candidate's ability to apply the language to various scenarios, including business, data, application, and technology architectures.

>> OGA-032 Practice Tests <<

## 100% Pass High Pass-Rate The Open Group - OGA-032 - ArchiMate 3 Part 2 Exam Practice Tests

You will become accustomed to and familiar with the free demo for The Open Group OGA-032 Exam Questions. Exam self-evaluation techniques in our OGA-032 desktop-based software include randomized questions and timed tests. These tools assist you in assessing your ability and identifying areas for improvement to pass the The Open Group ArchiMate 3 Part 2 Exam exam.

### The Open Group ArchiMate 3 Part 2 Exam Sample Questions (Q11-Q16):

#### NEW QUESTION # 11

Please read this scenario prior to answering the question

An airline operates a Flight Scheduling process supported by a Scheduling Engine and Crew Management application.

Flight schedules and staff availability are stored in separate databases. Both applications run in redundant server clusters connected via dual LAN switches and independent storage arrays.

Refer to the scenario.

Which option best represents the relationships across layers?

- A. Model applications only as Technology Nodes.
- B. Use Aggregation only for all relationships.
- C. Model Flight Scheduling as a Business Process served by Application Services realized by Application Functions assigned to Application Components, accessing Data Objects, deployed on Server Nodes connected through Communication Networks to Storage Devices.
- D. Model crew availability as a Business Actor.

Answer: C

## NEW QUESTION # 12

Please read this scenario prior to answering the question

The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center. Located in an area prone to flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities.

To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.

The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the transition is crucial.

However, several constraints make the planned migration to the new data centers particularly challenging. Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to specific four-hour windows on weekends.

Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.

ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process. The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.

Refer to the Scenario

The IT department's leader has assigned you the task of creating a model to explain the rationale behind ArchiSurance's decision to transform its data center infrastructure. The model should show the concerns and motivations of the stakeholders involved.

Additionally, it should outline the specific goals to be achieved through the data center transformation program, the associated deliverables, and the limitations that must be considered throughout the program's implementation.

Which of the following answers provides the best explanation?

- A.

Answer: D

Explanation:

Stakeholders & Drivers

- You've got your four stakeholder elements (Senior Management, Board Members, Customers, Major Stockholders) all linked into the single "A single data center is too high a risk" assessment, itself driven by the Business Continuity driver.

Assessment → Goal

- The "A single data center is too high a risk" Assessment flows into the Goal "Transition to two new data centers in separate cities."

Goal Decomposition

- That top-level Goal is decomposed (composition diamonds) into its two sub-Goals ("Reassure ArchiSurance stakeholders" and

"Reduce downtime for critical applications").

- Those two, together, feed into the broader goal "Reduce risk of business interruption" (shown with the correct aggregation/requirement arrow).

Course of Action & Deliverable

- The "Data center transformation program" is modeled as a Course-of-Action (concave-sided rectangle) triggered by the Board of Directors' Approval (a Requirement).

- It produces (artifact arrow) the "New data centers" deliverable.

Constraints (Requirements)

- The three implementation constraints ("Critical applications cannot be offline for more than one hour," "Downtime must be in four-hour weekend windows," and "Move must occur outside of closing periods") are shown as Requirement elements feeding back into the program and the

"Reduce risk of business interruption" goal.

### NEW QUESTION # 13

Please read this scenario prior to answering the question

The ArchiSurance enterprise document management solution includes a sophisticated ecosystem of applications and technologies. Designed with a strong emphasis on high availability, it plays a vital role in providing support for a diverse range of document types and managing a substantial volume of document-based transactions on a daily basis. Recognizing its importance to the business, the document management solution is redundantly hosted at two geographically separate data center sites, both configured identically for seamless operations.

The system software at the core of the document management solution is comprised of three key modules. The Document Engine serves as a repository, facilitating document storage, retrieval, and various other operations. The Workflow Engine acts as a host for document management applications, while the Application Engine powers the most advanced and sophisticated applications within the system.

Two key factors have driven the Architecture Board's approval of a project aimed at updating this critical solution. Firstly, the supplier of the Workflow Engine has given notice of the end of support for the current software version, necessitating an upgrade. Secondly, the system administrator responsible for the Application Engine has flagged the need for hardware replacement on the server where the software is currently running. Given that the Claim Management application shares infrastructure with the Application Engine, the involvement of the system administrator responsible for this application is crucial in the project planning and execution.

Refer to the Scenario

You are the Enterprise Architect within this organization. You have been assigned the task of modeling the applications and technology for this solution, as well as outlining the motivations driving the need for its update.

Based on the scenario, which answer provides the most complete and accurate description?

- A.

- B.

• C.

• D.

**Answer: B**

Explanation:

Chosen option provides the most complete and accurate representation according to the scenario:

It clearly models the motivations (e.g., "Involve system administrator," "Update software product portfolio," "High availability of

infrastructure," "Hardware platform needs replacing," "Software version needs to be updated") and their relationships, capturing both the software and hardware motivations driving the project.

The business layer is represented with processes/services ("File claim," "Assign claim"), and the supporting data objects are linked appropriately (e.g., "Proof of loss data," "Analyst data," "Claim assignment business rules data").

The application layer accurately shows the main components ("Claim Management," "Application Engine," "Document Engine," "Document Management," "Workflow Management," "Workflow Engine") and their interactions, which reflects the described architecture of the document management solution.

The technology layer is represented by the green background (Document Management Solution), which contains the application components as described, showing how infrastructure supports application services.

Relationships between all layers (motivation, business, application, and technology) are clearly modeled, allowing for end-to-end traceability from motivation to implementation.

#### NEW QUESTION # 14

Please read this scenario prior to answering the question

The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center.

Located in an area prone

to flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities.

To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.

The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the transition is crucial. However, several constraints make the planned migration to the new data centers particularly challenging. Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to specific four-hour windows on weekends. Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.

ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process. The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.

Refer to the Scenario

The program manager overseeing the data center transformation has asked you to model an outline of the implementation plan which has three stable states defined. You should show the deliverables associated with each plateau in connection with the physical elements. Additionally, you need to show how each phase contributes to achieving a stable state for the data center transformation. Which of the following answers provides the best description?

- A. A diagram of a data processing process Description automatically generated

- B. A diagram of a software system Description automatically generated

- C. A diagram of a software process Description automatically generated

- D. A diagram of a data center Description automatically generated

**Answer: A**

**Explanation:**

This question focuses on modeling the implementation plan for the data center transformation at ArchiSurance. The goal is to represent how the different phases of the project contribute to achieving the three stable states, or plateaus, while illustrating the deliverables connected to these plateaus and the physical elements involved.

**Key ArchiMate® 3.2 Concepts Applied:**

\* **Plateaus:** Plateaus represent intermediate stable states within an architecture transformation, showing the condition of the architecture at specific moments in time. In this scenario, the plateaus correspond to the stable data center configurations at different phases:

\* **Plateau 1:** Only the old data center is in use.

\* **Plateau 2:** Both the old and new data centers are in use simultaneously.

\* **Plateau 3:** Only the new data center is in use, and the old data center is fully decommissioned.

\* **Physical Elements:** These refer to the data centers, hardware, software, and networks that make up the infrastructure being migrated. These should be clearly depicted in connection with each phase of the transformation program.

\* **Deliverables and Phases:** Each phase of the transformation process includes specific deliverables, such as:

\* Procurement of new hardware and software.

\* Setting up and testing the new data centers.

\* Transitioning between the old and new data centers.

\* Dismantling the old data center and returning its hardware for refunds.

\* **Work Packages and Dependencies:** Work packages represent activities or tasks in ArchiMate® and are connected to the plateaus. These must be modeled with proper sequencing, showing how each phase contributes to reaching the next stable state.

**Why Option A is Correct:**

\* **Option A** accurately represents the three plateaus (stable states) and clearly illustrates the deliverables (e.g., the new data center, tested hardware and software, and dismantled old data center) in relation to each phase of the transformation.

\* The connections between the physical elements (such as the centralized data center, distributed data center, and backup data center) are properly displayed and aligned with the described multi-phase process.

\* The phases are laid out logically, showing how each phase (e.g., procurement, testing, transition) leads to the next stable state.

(plateau), following the principles of a plateau and work package transformation in ArchiMate®.

\* The flow of deliverables from one plateau to the next is consistent with the need for dependencies (e.g., the new data center cannot be fully active until the hardware and software have been tested in parallel).

Why Other Options Are Incorrect:

\* Option B and Option D do not show the relationships between the phases and the stable states as clearly as Option A. They lack some critical connections or do not accurately represent the progression between plateaus and the physical infrastructure.

\* Option C is closer but misses important sequencing in how the work packages (activities) and plateaus interact, leading to an incomplete representation of the transformation.

Conclusion:

Option A provides the most complete and accurate description based on ArchiMate® 3.2 modeling principles.

It correctly demonstrates how each phase of the data center transformation contributes to achieving the stable states (plateaus) and ensures that the physical elements, work packages, and deliverables are properly aligned.

## NEW QUESTION # 15

Please read this scenario prior to answering the question

The ArchiSurance senior management, board members, customers, and major stockholders have expressed long-standing concerns regarding the business continuity risks associated with relying on a single data center.

Located in an area prone to

flooding, earthquakes, and occasional water leaks from the cafeteria above, the current data center has significant vulnerabilities.

To address these concerns and mitigate the risks, ArchiSurance has developed a comprehensive plan to relocate its existing data center to two separate ready-to-use data centers in different cities. As a major undertaking, the approval of the Board of Directors is required to proceed with the project.

The primary objectives of the data center move are to reduce the risk of business interruptions, reduce both planned and unplanned downtime for critical applications, and provide reassurance to ArchiSurance stakeholders. Ensuring minimal disruption during the transition is crucial. However, several constraints make the planned migration to the new data centers particularly challenging. Certain critical ArchiSurance applications cannot be offline for more than one hour, and any planned downtime must be restricted to specific four-hour windows on weekends. Additionally, the migration cannot take place during quarterly or year-end closing periods to avoid disrupting critical processing operations.

ArchiSurance management has devised a multi-phase data center transformation program to facilitate a smooth transition. Each phase is critical for establishing stable and fully functional data center configurations throughout the transformation process.

The initial phase entails detailed scheduling and planning to develop a comprehensive transformation plan aligned with ArchiSurance's timing and scheduling requirements. During the second phase, ArchiSurance will procure the necessary hardware and software for the new data centers, while also seeking refunds for the hardware and software in the current data center once it is decommissioned. The third phase involves setting up the new data centers and conducting parallel testing of the new hardware and software alongside the existing production environment. The transition between the old and new data centers occurs in the fourth phase, followed by the fifth phase, which is the decommissioning of the old data center. This involves returning the hardware and software to obtain the contracted refunds. Each phase, from the second to the fifth, is initiated once specific conditions outlined in the previous phase have been met.

Refer to the Scenario

The IT department's leader has assigned you the task of creating a model to explain the rationale behind ArchiSurance's decision to transform its data center infrastructure. The model should show the concerns and motivations of the stakeholders involved.

Additionally, it should outline the specific goals to be achieved through the data center transformation program, the associated deliverables, and the limitations that must be considered throughout the program's implementation.

Which of the following answers provides the best explanation?

- A. A diagram of a data center AI-generated content may be incorrect.

- B. A diagram of a data center AI-generated content may be incorrect.

- C. A diagram of data center AI-generated content may be incorrect.

- D. A diagram of data center AI-generated content may be incorrect.

**Answer: C**

**Explanation:**

We need to identify the most accurate and complete model that explains:

- \* Stakeholder Concerns & Motivations- Including senior management, board members, customers, and stockholders.
- \* Objectives & Goals- Reducing business risks, minimizing downtime, and reassuring stakeholders.
- \* Deliverables- The transition to two new data centers and data center transformation program.
- \* Constraints & Requirements- Planned downtime limits, critical application uptime requirements, and scheduling constraints.

Why C is the Best Choice:

#Includes all stakeholder concerns- Clearly represents business continuity risks and the rationale for transitioning to two new data centers. #Clearly defines the objectives- Reducing downtime and risk of business interruption. #Shows key constraints-

- \* Critical applications cannot be offline for more than one hour.
- \* Downtime must be in four-hour weekend windows.
- \* The migration must avoid closing periods. #Links deliverables to objectives- The data center transformation program and new data centers are clearly positioned as solutions. #Represents dependencies correctly- Showing how each motivation leads to a goal, which leads to a deliverable.

Why Not A, B, or D?

- \* A: Does not establish a strong link between the concerns and the solution clearly enough.
- \* B: The structure does not align well with the scenario requirements, and some constraints and dependencies are missing.
- \* D: Overcomplicates some relationships and does not emphasize stakeholder concerns effectively.

## NEW QUESTION # 16

.....

Many people worry about buying electronic products on Internet, like our OGA-032 preparation quiz, because they think it is a kind of dangerous behavior which may bring some virus for their electronic product, especially for their computer which stores a great amount of privacy information. We must emphasize that our OGA-032 simulating materials are absolutely safe without viruses, if there is any doubt about this after the pre-sale, we provide remote online guidance installation of our OGA-032 exam practice.
