These formats are Plat-Dev-301 PDF dumps files, desktop practice test software, and web-based practice test software. All these three Plat-Dev-301 exam dumps formats contain the Real Plat-Dev-301 Exam Questions that assist you in your Salesforce Certified Platform Developer II - Multiple Choice practice exam preparation and finally, you will be confident to pass the final Salesforce Certified Platform Developer II - Multiple Choice (Plat-Dev-301) exam easily.

## **Salesforce Certified Platform Developer II - Multiple Choice Sample**

## Questions (Q137-Q142):

### NEW QUESTION # 137

A Salesforce developer is hired by a multi-national company to build a custom Lightning application that shows employees their employment benefits and earned commissions over time. The application must acknowledge and respect the user's locale context for dates, times, numbers, currency, and currency symbols.

When using Aura components, which approach should the developer implement to ensure the Lightning application complies with the user's locale?

- A. Use the \$Label global value provider.
- **B. Use the \$Locale value provider to retrieve the user preferences.**
- C. Use the \$User global variable to retrieve the user preferences.
- D. Create a Hierarchical custom setting to store user preferences.

**Answer: B**

Explanation:

The \$Locale value provider should be used to ensure the Lightning application respects the user's locale for dates, times, numbers, currency, and currency symbols. This global value provider gives components access to locale formats and labels, which are automatically rendered according to the user's locale settings.

### NEW QUESTION # 138

What should be added to the setup, in the location indicated, for the unit test above to create the controller extension for the test?

- A. `AccountControllerExt extension = new AccountControllerExt (acct);`
- B. `ApexPages.Standardcontroller sc = new ApexPages. Standardcontroller (acct.Id) ;AccountControllerExt extension = new AccountControllerExt(sc) ;om`
- C. `AccountControllerExt extension = new AccountControllerExt (acct.Id) ;`
- **D. `ApexPages.StandardController sc = new ApexPages.StandardController(acct);AccountcontrollerExt extension = new AccountControllerExt(sc);`**

**Answer: D**

Explanation:

For the unit test to create the controller extension, the correct setup is to instantiate a new `ApexPages.StandardController` with the Account record and then use it to instantiate the `AccountControllerExt`. This sets up the controller extension with the context of the provided Account record.

### NEW QUESTION # 139

What is the best practice to initialize a Visualforce page in a test class?

- A. `Use controller. currentPage. setPage (MyTastfage) ;`
- B. `Use Test. currantPage .getParamatars put (MyTaestPaga) ;`
- C. `Use Test. setCurrentPage MyTestPags;`
- **D. Use Test. setCurrentPage (Page. MyTeatPage);**

**Answer: D**

Explanation:

`Test.setCurrentPage(Page.MyTestPage)` is used to set the context to a Visualforce page in tests, allowing you to simulate a page request in a test method.

### NEW QUESTION # 140

Universal Containers (UC) has enabled the translation workbench and has translated picklist values. UC has a custom multi-select picklist field, `Product__c`, on the Account object that allows sales reps to specify which of UC's products an Account already has. A developer is tasked with writing an Apex method that retrieves Account records, including the `Product__c` field.

What should the developer do to ensure the value of `Products__c` is in the current user's language?

- A. Call the translate method on each record in the SOQL result list.
- B. Set the locale on each record in the SOQL result list.
- C. Use toLabelDicts\_\_c) in the fields list of the SOQL query.
- D. Use the Locale clause in the SOQL query.

**Answer: C**

Explanation:

Using toLabel() in the SOQL query ensures that picklist values are returned in the user's language, which is necessary for organizations that have the translation workbench enabled.

Multi-language Solutions: [Salesforce Developer Guide](https://developer.salesforce.com/docs/atlas.en-us.soql\_sosl.meta/soql\_s

#### NEW QUESTION # 141

For compliance purposes, a company is required to track long-term product usage in their org. The information that they need to log will be collected from more than one object and, over time, they predict they will have hundreds of millions of records.

What should a developer use to implement this?

- A. Big objects
- B. Field audit trail
- C. Field history tracking
- D. Setup audit trail

**Answer: A**

Explanation:

Big objects provide a solution for storing and managing large amounts of data within Salesforce. They are ideal for compliance purposes when tracking long-term usage data that will accumulate over time into very large record counts.

#### NEW QUESTION # 142

.....
