SAP C-BCBDC-2505 시험요강:

주제	소개

주제 1	• SAP Datasphere: This section of the exam measures the skills of Solution Consultants and covers a comprehensive understanding of SAP Datasphere. Candidates should demonstrate knowledge of data modeling, transformation, and harmonization using SAP Datasphere tools. It evaluates how well they can work with data layer structuring, semantic modeling, and integration to support real-time data access for various business applications.
주제 2	• SAP Business Data Cloud: This section of the exam measures the skills of Data Analysts and covers core concepts of the SAP Business Data Cloud. Candidates are expected to understand its key components, integration mechanisms, and how it functions as a foundation for unified data management across SAP and non-SAP environments. The focus is on enabling data connectivity and providing governed access to data across the enterprise.
주제 3	• SAP Analytics Cloud: This section of the exam measures the skills of Data Analysts and covers the use of SAP Analytics Cloud in data visualization, story building, and dashboard creation. Candidates should be familiar with its planning and predictive capabilities, along with how to utilize data insights to drive business decision-making. It also includes managing user access and collaborating through shared analytics assets.

최신 SAP Certified Associate C-BCBDC-2505 무료 샘플문제 (Q50-Q55):

질문 # 50

How can you join two existing artifacts in SAP Datasphere? Note: There are 2 correct answers to this question.

- A. Create an SQL view with a JOIN operation.
- B. Create a graphical view, drag an artifact to the canvas, and the second one on top of the first one.
- C. Create an Analytic Model based on the first artifact and add the second artifact as the Used in property.
- D. Create a graphical view and select the Join node icon.

정답: A,D

설명:

In SAP Datasphere, there are distinct methods for joining two existing artifacts, enabling powerful data integration. One common and intuitive approach is to create a graphical view and select the Join node icon (B). In the graphical view editor, you can drag your source artifacts (tables or views) onto the canvas, and then use the dedicated "Join" node to define the join conditions between them, visually mapping the columns and selecting the join type (e.g., inner, left outer). This method is highly visual and user-friendly. Another powerful and flexible way to join artifacts is to create an SQL view with a JOIN operation (C). For users comfortable with SQL, an SQL view allows for direct coding of complex join conditions, including various join types and advanced filtering, offering fine-grained control over the data integration logic. Both methods achieve the goal of combining data from multiple artifacts into a single result set, tailored to different user preferences and complexity requirements.

질문 # 51

An organization aims to enhance data collaboration between departments and external partners while maintaining control over data access. Which SAP Business Data Cloud components should they leverage?

There are 3 correct answers to this question.

Response:

- A. Public data repositories
- B. Data Marketplace
- C. Email data sharing
- D. Data Catalog
- E. Role-based access control

정답: B,D,E

질문 # 52

Which options do you have when using the remote table feature in SAP Datasphere? Note: There are 3 correct answers to this question.

- A. Data access can be switched from virtual to persisted, but not the other way around.
- B. Data can be loaded using advanced transformation capabilities.
- C. Data can be persisted by using real-time replication.
- D. Data can be persisted in SAP Datasphere by creating a snapshot (copy of data).
- E. Data can be accessed virtually by remote access to the source system.

정답: C,D,E

설명:

The remote table feature in SAP Datasphere offers significant flexibility in how data from external sources is consumed and managed. Firstly, data can be accessed virtually by remote access to the source system (E). This means Datasphere does not store a copy of the data; instead, it queries the source system in real-time when the data is requested. This ensures that users always work with the freshest data. Secondly, data can be persisted in SAP Datasphere by creating a snapshot (copy of data) (C). This allows users to explicitly load a copy of the remote table's data into Datasphere at a specific point in time, useful for performance or offline analysis. Lastly, data can be persisted by using real-time replication (D). For certain source systems and configurations, Datasphere supports continuous, real-time replication, ensuring that changes in the source system are immediately reflected in the persisted copy within Datasphere. Option A is incorrect as the access mode cannot be arbitrarily switched, and option B refers to data flow capabilities, not inherent remote table access options.

질문 # 53

Which of the following options will duplicate data to SAP HANA cloud under SAP Datasphere, based on data from an external source object?

There are 3 correct answers to this question.

Response:

- A. Import a source as a remote table and schedule replication
- B. Import a source as a remote table without taking any further action
- C. Use a replication flow to fill a local table
- D. Use a data flow to fill a target table
- E. Create a graphical view based on a remote table for that source object and persist the view data

정답: A,C,D

질문 # 54

What are some use cases for an SAP Datasphere task chain? Note: There are 3 correct answers to this question.

- A. Execute a data action for a planning function
- B. Upload a CSV file into a local table
- C. Run an Open SQL Schema Procedure
- D. Create or Refresh View Persistency
- E. Execute a Replication Flow and Transformation Flow in sequence

정답: C,D,E

설명:

SAP Datasphere task chains are powerful tools for orchestrating and automating sequences of operations, making them ideal for managing complex data pipelines and recurring processes. One key use case is to Create or Refresh View Persistency (A). If you have views for which you want to persist the data (materialize them into tables) for performance or specific analytical needs, a task chain can automate the scheduled recreation or refresh of these persistent views. Another common use case is to Execute a Replication Flow and Transformation Flow in sequence (C). This allows you to define a process where data is first replicated from a source system into Datasphere, and then immediately followed by transformation steps to cleanse, enrich, or aggregate that data, ensuring a fully automated end-to-end data preparation. Furthermore, task chains can be used to Run an Open SQL Schema Procedure (D). This provides flexibility to integrate custom SQL logic or stored procedures into an automated workflow, enabling advanced data manipulation or administrative tasks. Uploading a CSV file (B) is typically a manual import action, and executing a data action for a planning function (E) relates to planning models, not general Datasphere task chains.

질문 # 55

ExamPassdump는 믿을 수 있는 사이트입니다. IT업계에서는 이미 많이 알려져 있습니다. 그리고 여러분에 신뢰를 드리 기 위하여 SAP 인증C-BCBDC-2505 관련자료의 일부분 문제와 답 등 샘플을 무료로 다운받아 체험해볼 수 있게 제공합니다. 아주 만족할 것이라고 믿습니다. ExamPassdump제품에 대하여 아주 자신이 있습니다. SAP 인증C-BCBDC-2505 도 여러분의 무용지물이 아닌 아주 중요한 자료가 되리라 믿습니다. 여러분께서는 아주 순조로이 시 험을 패스하실 수 있을 것입니다.
