

Quick Preparation with Salesforce Mule-101 Questions

P.S. Free 2026 Salesforce Mule-101 dumps are available on Google Drive shared by BraindumpQuiz:
<https://drive.google.com/open?id=1LcIi6MFPg0YozQzNMOWsyMce2SiREtBt>

Choose Mule-101 premium files, you will pass for sure. Each questions & answers of Mule-101 free training pdf are edited and summarized by our specialist with utmost care and professionalism. The Salesforce Mule-101 latest online test is valid and really trustworthy for you to rely on. The highly relevant content & best valid and useful Mule-101 Exam Torrent will give you more confidence and help you pass easily.

Salesforce Mule-101 Exam Overview:

Certification Vendor: Salesforce
Exam Name: Salesforce Certified MuleSoft Integration Foundations
Exam Number: Mule-101
Exam Price: USD 200
Exam Duration: 90 minutes
Available Languages: English
Real Exam Qty: 45
Related Certifications: Salesforce Certified MuleSoft Integration Foundations
Passing Score: 68%
Exam Format: Multiple Choice
Sample Questions: Salesforce Mule-101 Sample Questions
Exam Way: Online proctored or onsite at a testing center
Pre Condition: No prerequisites required
Official Syllabus URL: <https://trailhead.salesforce.com/credentials/mulesoftassociate>

Mule-101 Latest Study Materials, Exam Mule-101 Quiz

There is nothing more exciting than an effective and useful Mule-101 question bank if you want to get the Mule-101 certification in the least time by the first attempt. The sooner you use our Mule-101 training materials, the more chance you will pass Mule-101 the exam, and the earlier you get your Mule-101 certificate. You definitely have to have a try on our Mule-101 exam questions and you will be satisfied without doubt. Besides that, We are amply praised by our customers all over the world not only for our valid and accurate Mule-101 study materials, but also for our excellent service.

Salesforce Mule-101 Exam Syllabus Topics:

Topic	Details
Topic 1	Recognize common integration problems, use cases, and technical solutions: This domain examines integration scenarios, compares legacy and modern approaches, and guides selection of appropriate integration technologies for business problems.
Topic 2	Recognize and interpret essential integration concepts and terminology: This domain focuses on foundational concepts including cloud service models, infrastructure types, networking protocols, data formats, security principles, and API classifications.
Topic 3	Describe the components and benefits of Anypoint Platform for API management: This domain focuses on Anypoint Platform's API management features, lifecycle development, and advantages of API-led connectivity.
Topic 4	Describe the components and benefits of Anypoint Platform for system integration: This domain covers Anypoint Platform's integration components, connectors, runtime control planes, deployment options, and reusable Exchange assets.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q46-Q51):

NEW QUESTION # 46

An integration team follows MuleSoft's recommended approach to full lifecycle API development. 9

- A. Use the API specification to build the MuleSoft application
- B. Use the API specification to monitor the MuleSoft application
- C. Validate the API specification
- D. Design the API specification

Answer: A

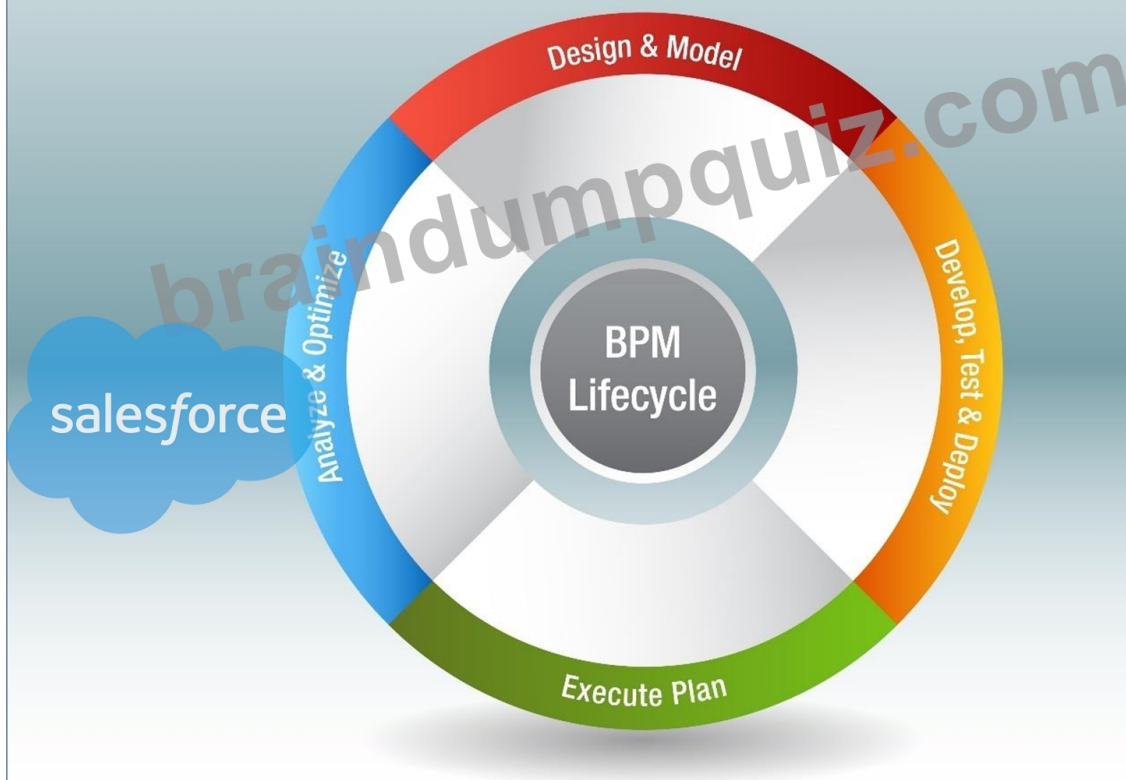

Explanation:

(Note: The question implies "What is the next step after design/validation?" or "How is the spec used?". Based on the answer key A, the context is how the spec drives development).

Comprehensive and Detailed Explanation:

Business Process Management (BPM) Lifecycle

Lifecycle phases of business process management

Explore

API-Led Connectivity & Design-First: MuleSoft promotes a "Design-First" approach. You first write the RAML or OAS specification.

MuleSoft scaffolding: Once the specification is designed and published to Exchange, the developer imports it into Anypoint Studio. Studio then scaffolds (automatically generates) the Mule flows based on the API Specification.

The Workflow:

Design: Create the API contract (RAML/OAS).

Publish: Publish to Exchange.

Build (Answer A): Use the API specification to generate the flow structure (APIkit Router) and implement the logic.

This ensures the implementation strictly matches the design defined in the earlier phases.

NEW QUESTION # 47

What is an advantage that Anypoint Platform offers by providing universal API management and Integration-Platform-as-a-Service (iPaaS) capabilities in a unified platform?

- A. Ability to use a single iPaaS to manage all API developer portals

- B. Ability to use a single iPaaS to manage and integrate all API gateways
- C. Ability to use a single connector to manage and integrate all APIs
- **D. Ability to use a single control plane for both full-lifecycle API management and integration**

Answer: D

Explanation:

Unified Platform: Many vendors offer either API Management (APIM) or Integration (iPaaS) as separate tools. Anypoint Platform combines them.

Single Control Plane: The primary advantage is having a single interface (The Anypoint Control Plane) where you can do everything: design APIs, build integrations, deploy them, govern them with policies, and monitor them.

Impact: This reduces complexity, lowers costs (no need to buy two separate stacks), and streamlines the workflow from development to operations.

NEW QUESTION # 48

A key CI/CD capability of any enterprise solution is a testing framework to write and run repeatable tests.

- A. Anypoint CLI
- **B. MUnit**
- C. Exchange Mocking Service
- D. Mule Maven Plugin

Answer: B

Explanation:

MUnit: This is the exclusive application testing framework for Mule4. It allows developers to build automated tests for their APIs and integrations.

CI/CD Integration: MUnit is designed to run as part of the continuous integration (CI) pipeline (usually executed via the Mule Maven Plugin during the build phase). If the MUnit tests fail, the build fails, preventing faulty code from deploying to production.

Why others are incorrect:

Exchange Mocking Service: Simulates an API based on RAML for design validation, not for testing the actual implementation logic.

Mule Maven Plugin: The tool that executes the build/deploy, but MUnit is the framework that writes/runs the tests.

NEW QUESTION # 49

An IT integration team followed an API-led connectivity approach to implement an order-fulfillment business process. It created an order processing API that coordinates stateful interactions with a variety of microservices that validate, create, and fulfill new product orders.

- A. Aggregation
- **B. Orchestration**
- C. Streaming
- D. Multicasting

Answer: B

Explanation:

Orchestration: This refers to the logic where a central controller (the Process API) manages the interactions between multiple systems to achieve a business goal.

The Scenario: The API is "coordinating stateful interactions" (e.g., Step 1: Validate Customer -> Step 2: Check Inventory -> Step 3: Debit Payment -> Step 4: Create Shipment). This strictly sequential or logic-driven coordination is the definition of Orchestration.

Why others are incorrect:

Aggregation: Specifically refers to just gathering data from multiple sources (Scatter-Gather) and combining the results, usually without complex state management or sequential logic.

Streaming: Refers to processing data in continuous chunks, not the logic of coordinating services.

NEW QUESTION # 50

An organization's IT team must secure all of the internal APIs within an integration solution by using an API proxy to apply required authentication and authorization policies.

- A. API Management (APIM)
- B. Robotic Process Automation (RPA)
- C. Electronic Data Interchange (EDI)
- D. Integration Platform-as-a-Service (IPaaS)

Answer: A

Explanation:

API Management (APIM): This category of software capability focuses on the Governance, Security, and Lifecycle of APIs. 7 The Role of the Proxy: In MuleSoft's API Manager (the APIM component), you create an API Proxy. This proxy sits in front of the backend API implementation. It intercepts incoming requests, checks security policies (like Client ID enforcement or OAuth 2.0), and only forwards valid requests to the backend.

Why others are incorrect:

iPaaS: Refers to the integration/building platform (connecting systems), though modern platforms like Anypoint combine both iPaaS and APIM. The specific act of securing via proxy is an APIM function.

EDI: Standard for B2B document exchange (like Purchase Orders).

RPA: Automating manual tasks on UI screens.
