Exam NS0-194 Price - NS0-194 Valid Vce

In the PDF version, the NetApp Certified Support Engineer (NS0-194) exam questions are printable and portable. You can take these NetApp Certified Support Engineer (NS0-194) pdf dumps anywhere and even take a printout of NetApp Certified Support Engineer (NS0-194) exam questions. The PDF version is mainly composed of real Network Appliance NS0-194 Exam Dumps. ITExamSimulator updates regularly to improve its NetApp Certified Support Engineer (NS0-194) pdf questions and also makes changes when required.

Network Appliance NetApp Certified Support Engineer Sample Questions (Q58-Q63):

NEW QUESTION # 58

You are creating a disk-partitioned root aggregate.

Which two rules are enforced automatically when accomplishing this task? (Choose two.)

- A. A RAID group can have more than one partition from the same disk.
- B. The only supported RAID type for aggregates containing root-data partitioned disks is RAID-DP.
- C. A RAID group cannot have more than one partition from the same disk.
- D. The only supported RAID type for aggregates containing root-data partitioned disks is RAID 4.

Answer: B,C

NEW QUESTION # 59

A customer recently had a controller module failure on a FAS62xx system running clustered Data ONTAP 8.3.1. The controller module had been replaced last night and everything is working well but the customer noticed warnings concerning licensing on the console. The warnings say there is a grace period of 89 days remaining. In this scenario, what should be done to solve this problem?

- **A. Obtain new 8.2x format license keys and install them using the appropriate commands.**
- B. Execute a system restore to recover the previous license keys, and then apply to the new controller module.
- C. Collect the new license keys from the new controller module packaging and install them using the appropriate commands.
- D. Apply the previously used license keys using the appropriate commands.

Answer: A

NEW QUESTION # 60

You want to set up a FabricPool between an ONTAP cluster and Google Cloud Storage. In this scenario, which two components are required to accomplish this task? (Choose two.)

- A. a service account access key
- **B. a Certificate Authority (CA) certificate**
- **C. intercluster LIFs**
- D. an Express Route

Answer: B,C

NEW QUESTION # 61

A customer wants to protect the data in a volume using a schedule configured on a cluster. The customer is required to retain more backups on the destination than are present on the source. What would the customer use to protect the data in this situation?

- **A. LSM**
- B. DP
- C. LS
- D. XDP

Answer: A

NEW QUESTION # 62

When using NetApp Volume Encryption (NVE) which type of server is needed to keep encryption keys separate from encrypted data?

- **A. KMIP**
- B. TLS
- C. RADIUS
- D. TKIP

Answer: A

Explanation:

NetApp Volume Encryption uses a KMIP server when encryption keys must be stored separately from encrypted data. KMIP is the Key Management Interoperability Protocol and is the standard method ONTAP uses to communicate with external key managers. RADIUS is an authentication protocol and does not store encryption keys for NVE. TLS secures communications but is not itself a key management server. TKIP is an older wireless encryption mechanism and is unrelated to ONTAP volume encryption. Separating keys from encrypted data is a core security control because compromise of storage media or data blocks should not also expose the keys required to decrypt them. In ONTAP environments, external key management provides centralized lifecycle control, auditing, and recovery considerations for encrypted volumes. Support engineers must also verify key-manager reachability before enabling encryption because inaccessible keys can prevent encrypted volumes from being brought online. References/topics: NetApp Volume Encryption, external key management, KMIP server configuration, encryption key separation, and ONTAP security architecture.
