Valid JN0-232 Test Questions & Reliable JN0-232 Dumps

If you are a beginner, start with the JN0-232 learning guide of practice materials and our JN0-232 exam questions will correct your learning problems with the help of the test engine. All contents of JN0-232 training prep are made by elites in this area rather than being fudged by laymen. Let along the reasonable prices which attracted tens of thousands of exam candidates mesmerized by their efficiency by proficient helpers of our company. Any difficult posers will be solved by our JN0-232 Quiz guide.

Juniper Security, Associate (JNCIA-SEC) Sample Questions (Q83-Q88):

NEW QUESTION # 83

Which two statements about SRX Series zones are correct? (Choose two.)

- A. The functional zone is used to define the management interface on smaller SRX Series Firewalls.
- B. The null zone allows the use of security policies to log dropped control plane traffic.
- C. A security zone processes intra-zone traffic without a security policy.
- D. The Junos-host zone allows the use of security policies to control access to the SRX Series Firewall.

Answer: C,D

Explanation:

The Junos-host zone enables the use of security policies to control access to services and management traffic destined to the SRX Series Firewall itself.

Intra-zone traffic (traffic within the same security zone) is permitted by default and is processed without requiring an explicit security policy.

NEW QUESTION # 84

Which two statements about functional zones are correct? (Choose two.)

- A. You reference the management functional zone in a security policy.
- B. The management functional zone controls management access to the firewall.
- C. You create only one functional zone called management.
- D. Functional zones consist of logical interfaces belonging to multiple zones.

Answer: A,B

Explanation:

The management functional zone can be referenced in security policies when defining how management traffic interacts with other zones.

The management functional zone is designed specifically to control management access (e.g., SSH, HTTPS, SNMP) to the firewall, ensuring administrative traffic is properly isolated and secured.

NEW QUESTION # 85

Referring to the exhibit, which two statements are correct about the traffic flow shown in the exhibit? (Choose two.)

```
user@SRX> show security flow session
Session ID: 264487, Policy name: dns/6, Timeout: 2, Session State: Valid
In: 10.20.30.40/53726 --> 203.0.113.1/53;udp, Conn Tag: 0x0, If: ge-0/0/4.0,
Pkts: 1, Bytes: 65,
Out: 203.0.113.1/53 --> 192.0.2.1/423;udp, Conn Tag: 0x0, If: ge-0/0/3.0,
Pkts: 1, Bytes: 140,
```

- A. The original source IP address was translated to a new source IP address.
- B. There is no change to the original destination IP address.
- C. The original destination IP address was translated to a new destination IP address.
- D. There is no change to the original source IP address.

Answer: A,B

Explanation:

The original source IP address in the session is 10.20.30.40, but in the "Out" direction it no longer appears; instead, the destination is 192.0.2.1, showing that the original source IP has been translated to a new source IP (192.0.2.1). The original destination IP address is 203.0.113.1, and that same IP still appears in the session (as the source in the "Out" direction), indicating that the destination IP itself has not changed.

NEW QUESTION # 86

Referring to the exhibit, which two statements are correct? (Choose two.)

- A. The NextGen Web Filtering type is being used.
- B. This is a custom Web filtering block message.
- C. The URL matches a predefined Web filtering category.
- D. The SRX firewall does not have an SSL proxy configuration.

Answer: A,C

Explanation:

The block page shows CATEGORY: NG_Reference and REASON BY: PRE_DEFINED,

indicating that the URL was matched and blocked based on a predefined Web filtering category.

The category name begins with NG_, which denotes a NextGen (NG) Web Filtering category, so the NextGen Web Filtering type is being used.

NEW QUESTION # 87

What must also be enabled when using source NAT if the address pool is in the same subnet as the interface?

- A. proxy ARP
- B. static NAT
- C. destination NAT
- D. dynamic DNS

Answer: A

Explanation:

When the source NAT address pool belongs to the same subnet as the egress interface, the SRX must respond to ARP requests for those translated IPs. Enabling proxy ARP allows the firewall to reply on behalf of those NAT pool addresses, ensuring proper packet delivery.

NEW QUESTION # 88

.....

Many students often start to study as the exam is approaching. Time is very valuable to these students, and for them, one extra hour of study may mean 3 points more on the test score. If you are one of these students, then JN0-232 exam tests are your best choice. Because students often purchase materials from the Internet, there is a problem that they need transport time, especially for those students who live in remote areas. When the materials arrive, they may just have a little time to read them before the exam. However, with JN0-232 Exam Questions, you will never encounter such problems, because our materials are distributed to customers through emails. After you have successfully paid, you can immediately receive JN0-232 test guide from our customer service staff, and then you can start learning immediately.

Valid JN0-232 Test Questions: <https://www.surepassexams.com/JN0-232-exam-bootcamp.html>
