Candidates can also attend SAFe RTE training workshops to gain a deeper understanding of the role and its responsibilities. Additionally, candidates can take practice exams to assess their knowledge and identify areas for improvement.

Scaled Agile Framework (SAFe) is a popular methodology used by organizations to scale agile practices across the enterprise. SAFe provides a set of best practices and guidelines for managing large-scale projects with multiple teams. One of the key roles in SAFe is the Release Train Engineer (RTE), who is responsible for leading and coordinating the agile release train (ART). The SAFe-RTE Certification Exam is designed to test the knowledge and skills required to perform this critical role.

It only needs 5-10 minutes after you pay for our SAFe-RTE learn torrent that you can learn it to prepare for your exam. Actually, if you can guarantee that your effective learning time with SAFe-RTE test preps are up to 20-30 hours, you can pass the exam.

Scaled Agile SAFe Release Train Engineer Sample Questions (Q114-Q119):

NEW QUESTION # 114

What is one reason why the ART predictability measure is important?

- A. It indicates where the Solution is ready to be released
- B. It allows the business and other stakeholders to plan effectively
- C. It demonstrates the need to fix the scope at the beginning of the PI
- D. It identifies under-performing teams

Answer: B

Explanation:

The ART predictability measure is a critical metric within the SAFe framework. It is important because it enables businesses and other stakeholders to plan effectively. This measure provides insights into how reliably teams and ARTs can deliver business value against their planned objectives. By understanding the predictability of the ART, stakeholders can make informed decisions about future investments, resource allocation, and market commitments. It is not primarily about identifying under-performing teams (A), fixing the scope at the beginning of the PI (B), or indicating when the Solution is ready to be released. Instead, predictability measures provide a fact-based understanding of the ART's ability to deliver on its commitments, which is essential for effective planning and adjustment of strategies¹.

NEW QUESTION # 115

Which tool is useful in facilitating scrum of scrums meetings?

- **A. Program board**
- B. Microsoft project schedule
- C. Agile lifecycle management software
- D. Team velocity comparison report

Answer: A

Explanation:

The Program Board is a crucial tool used in the SAFe framework to facilitate Scrum of Scrums meetings. It helps visualize the features planned for the current Program Increment (PI), along with the dependencies between different teams. This board is instrumental during the PI planning process, where Release Train Engineers (RTEs) and teams identify and highlight these dependencies to ensure alignment and coordination across the Agile Release Train (ART). The Program Board thus provides a clear and shared understanding of the ART's objectives and aids in the management of cross-team dependencies, which is essential during Scrum of Scrums meetings².

NEW QUESTION # 116

Which value is used when calculating flow efficiency?

- **A. Flow time**
- B. Flow distribution
- C. Flow load
- D. Flow velocity

Answer: A

Explanation:

Flow efficiency is calculated as the ratio of the total time spent in value-added work activities divided by the total flow time. This metric is used to measure how efficient an organization is at delivering value. Flow time, therefore, is the value used when calculating flow efficiency, as it represents the time elapsed from when a backlog item enters the workflow to when it is released².

NEW QUESTION # 117

What action can result in reduced collaboration between teams during the Program Increment (PI) Planning event?

- **A. Start the Agile Release Train without a System Team in place**
- B. Overprepare for PI Planning
- C. Include inexperienced team members
- D. Skip the Inspect and Adapt event

Answer: A

Explanation:

Starting an Agile Release Train (ART) without a System Team in place can lead to reduced collaboration between teams during the Program Increment (PI) Planning event. The System Team plays a vital role in supporting the ART by addressing system-level issues and enabling integration across different teams.

Without this support, teams may face challenges in integrating their work with others, leading to silos and reduced collaboration. The

presence of a System Team is essential for facilitating effective communication and collaboration during PI Planning, ensuring that teams can work together efficiently and that dependencies are managed properly¹².

NEW QUESTION # 118

Why do teams have an Iteration retrospective?

- A. To identify acceptance criteria
- B. To evaluate Metrics
- C. To iterate on Stories
- D. To adjust and identify ways to improve

Answer: D

NEW QUESTION # 119

.....
