## DASCA Senior Data Scientist Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which of the following is used to summarize a dataset by showing the median, quantiles, and min/max values for each of the variables?

- A. Scatter Chart
- B. Pie Charts
- C. Bar Charts
- **D. Box Plots**
- E. Histogram

**Answer: D**

Explanation:

A Box Plot (also called Whisker Plot) is a visualization tool used to summarize data distribution using five- number summary:

Minimum,

First quartile (Q1),

Median (Q2),

Third quartile (Q3),

Maximum.

It also highlights outliers explicitly.

Option A (Box Plots): Correct.

Option B (Pie Charts): Show proportions, not distribution.

Option C (Histogram): Shows frequency distribution but not quartiles/median.

Option D (Scatter Chart): Used for relationships between two variables, not summary statistics.

Option E (Bar Charts): Compare categories, not statistical spread.

Thus, the correct answer is Option A (Box Plots).

### NEW QUESTION # 33

Which of these are open-source column-oriented databases?

- A. HBase
- **B. All of the above**
- C. Cassandra
- D. Both A and B
- E. Accumulo

**Answer: B**

Explanation:

Column-oriented databases store data by columns rather than by rows, enabling efficient queries over large datasets, especially in analytical workloads.

Cassandra (Option A): An open-source, highly scalable, distributed column-oriented NoSQL database.

HBase (Option B): An open-source, Hadoop-based, column-family NoSQL database modeled after Google BigTable.

Accumulo (Option C): An open-source, secure, sorted, distributed key/value store built on top of HDFS and based on Google BigTable.

Since all three (A, B, and C) are open-source column-oriented databases, the correct answer is Option E (All of the above).

### NEW QUESTION # 34

A workflow refers to a:

- A. Indirected acyclic graph
- **B. Directed acyclic graph**
- C. Indirected cyclic graph
- D. Directed cyclic graph

**Answer: B**

Explanation:

In data pipelines and process orchestration, a workflow is represented as a Directed Acyclic Graph (DAG):

Directed: Each edge has a direction, representing task dependencies.

Acyclic: No cycles exist; tasks must follow a sequence without looping back.

Graph: Represents tasks as nodes and dependencies as edges.

This structure is common in tools like Apache Airflow, Spark DAGs, and Hadoop MapReduce job schedulers.

Option A & B: Incorrect, as workflows cannot have cycles (would cause infinite loops).

Option D: Incorrect, because workflows are directed, not undirected.

Thus, the correct answer is Option C (Directed Acyclic Graph).

### NEW QUESTION # 35

Business Intelligence (BI) is:

- A. BI focuses on descriptive analytics
- B. BI focuses on "What happened?"
- C. Both B and C
- **D. Both A and B**
- E. BI focuses on reporting on the future state of the business

**Answer: D**

Explanation:

Business Intelligence (BI) is primarily focused on descriptive analytics and reporting - understanding historical and current business performance.

Option A (Descriptive analytics): Correct. BI uses dashboards, reports, and OLAP tools to summarize what has occurred in the past.

Option B ("What happened?"): Correct. BI answers retrospective questions by analyzing transactional and operational data.

Option C (Future state): Incorrect. Predicting future business outcomes falls under predictive analytics or advanced analytics, not BI.

Thus, the correct answer is Option D (Both A and B).

DASCA Data Scientist Knowledge Framework (DSKF) - Data Visualization & BI: Descriptive Analytics and Reporting.

### NEW QUESTION # 36

Which of the following is NOT an example of graphical model?

- **A. Flow charts**
- B. Electrical circuits
- C. Geographical networks
- D. Computer networks
- E. Road maps

**Answer: A**

Explanation:

Graphical models represent relationships between objects using nodes (entities) and edges (relationships).

Examples include:

Road maps (Option A): Nodes = intersections, Edges = roads.

Electrical circuits (Option B): Nodes = components, Edges = connections.

Computer networks (Option C): Nodes = devices, Edges = connections.

Geographical networks (Option D): Nodes = locations, Edges = transport or connectivity.

However:

Flow charts (Option E): These represent process flows, not structural networks of entities and relationships.

They are procedural diagrams, not graphical models in the statistical/graph-theory sense.

Thus, the correct answer is Option E (Flow charts).
