## Juniper JN0-336 Reliable Test Testking: Security, Specialist (JNCIS-SEC) - UpdateDumps Updated Download

For easy use, UpdateDumps provides you with different version JN0-336 exam dumps. PDF version dumps are easy to read and reproduce the real exam. SOFT version dumps is a test engine which can measure what your preparations for the exam. If you want to know whether you prepare well for the JN0-336 test, you can take advantage of the SOFT version dumps to measure your ability. So you can quickly know your weaknesses and shortcomings, which is helpful to your further study.

### Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q48-Q53):

#### NEW QUESTION # 48

You are troubleshooting unexpected issues on your JIMS server due to out of order event log timestamps. Which action should you take to solve this issue?

- A. Enable time synchronization on the JIMS server.
- B. Enable time synchronization on the client devices.
- C. Enable time synchronization on the SRX Series devices.
- **D. Enable time synchronization on the domain controllers.**

**Answer: D**

Explanation:

To solve the issue of out of order event log timestamps on your JIMS server, you should enable time synchronization on the domain controllers. JIMS (Juniper Identity Management Service) is a Windows service that collects user, device, and group information from Active Directory domains or syslog sources and provides it to SRX Series devices and CSO for identity-based security policies. JIMS relies on the timestamps of the event logs generated by the domain controllers to track user logins, logouts, and IP

address changes. If the domain controllers have different or inaccurate clocks, the event logs may have out of order or incorrect timestamps, which can cause JIMS to miss or misinterpret some events and affect its accuracy and performance. Therefore, you should ensure that all the domain controllers in your network are synchronized with a reliable time source, such as an NTP server or a Windows Time service. Reference: = Juniper Identity Management Service User Guide, Juniper Identity Management Service Feature Guide, Configure JIMS Collector to Get Microsoft Event Logs, Considerations for timestamps in centralized logging platforms

#### NEW QUESTION # 49

You are currently using a third-party threat analyzer. You want your SRX Series device to send decrypted SSE traffic to..... In this scenario, which feature should you configure on the SRX device?

- A. IPS IPanotify action
- B. JSA vulnerability assessment
- C. Phase 2 proxy ID
- D. SSL decryption mirroring

Answer: A,B

#### NEW QUESTION # 50

After JSA receives external events and flows, which two steps occur? (Choose two.)

- A. After formatting the data, the data is stored in an asset database.
- B. After the information is filtered, JSA responds with active measures
- C. Before formatting the data, the data is analyzed for relevant information.
- D. Before the information is filtered, the information is formatted

Answer: A,D

Explanation:

When JSA (Juniper Secure Analytics) receives external events and flows, the typical processing steps are:

Option C. Before the information is filtered, the information is formatted.

Data formatting is an initial step in the process where raw data from events and flows is converted into a standard format that can be more easily processed and analyzed by JSA.

Option A. After formatting the data, the data is stored in an asset database.

Once the data is formatted, it is stored in an asset database. This database acts as a repository for all the formatted data, enabling JSA to perform further analysis, correlation, and eventually, to maintain a comprehensive view of the network assets and activities. These steps are part of JSA's comprehensive approach to security event management, which involves collecting, normalizing, and analyzing data to identify potential security threats and vulnerabilities efficiently.

#### NEW QUESTION # 51

You are asked to reduce the load that the JIMS server places on your network. Which action should you take in this situation?

- A. Connect JIMS to another SRX Series device.
- B. Connect JIMS to the RADIUS server
- C. Connect JIMS to the domain SQL server.
- D. Connect JIMS to the domain Exchange server

Answer: A

Explanation:

JIMS server is a Juniper Identity Management Service that collects user identity information from different authentication sources for SRX Series devices. It can connect to SRX Series devices and CSO platform in your network.

#### NEW QUESTION # 52

You set up the Juniper ATP Appliance solution on your network and notice that the macOS files are not being analyzed.....

malware.

In this scenario, what must you do?

- A. Under Config -> System Profiles -> Secondary Cores workspace, create a macOS profile
- B. Under Config > System Profiles ≥ Secondary Cores workspace, enable macOS Detection.
- C. You must obtain a Apple Mac Mini device and install the secondary core software.
- D. Create a macOS virtual machine on the JATP Appliance and install the secondary core software.

**Answer: A**

## NEW QUESTION # 53

.....

We offer you free demo for you to have a try before buying for JN0-336 learning materials, so that you can have a deeper understanding of what you are doing to buy. We recommend you to have a try before buying. What's more, JN0-336 training materials cover most of knowledge points for the exam, and you can master major knowledge points for the exam as well as improve your professional ability in the process of learning. In order to build up your confidence for JN0-336 Exam Braindumps, we are pass guarantee and money back guarantee, and if you fail to pass the exam, we will give you refund.
