PSPO-I Exam is conducted online and can be taken from any location with an internet connection.

Scrum Professional Scrum Product Owner I Sample Questions (Q137-Q142):

NEW QUESTION # 137

Which best describes the Product Backlog?
(choose the best answer)

- A. It provides just enough information to enable a Scrum Team to start the design phase of a product.
- **B. It is allowed to grow and change as more is learned about the product and its customers.**
- C. It is baselined to follow change management processes.
- D. It contains all foreseeable tasks and requirements from which the Scrum Team can develop and maintain a complete project plan.

Answer: B

Explanation:

The Product Backlog is an emergent, ordered list of what is needed to improve the product. It is the single source of work undertaken by the Scrum Team. The Product Backlog is dynamic; it constantly changes to identify what the product needs to be appropriate, competitive, and useful. The other options are not accurate descriptions of the Product Backlog, as it does not contain all foreseeable tasks and requirements, it does not provide just enough information to start the design phase, and it is not baselined to follow change management processes²³.

NEW QUESTION # 138

True or False: The value delivered by a product can only be determined by revenue.

- **A. False**
- B. True

Answer: A

Explanation:

Explanation

The value delivered by a product can not be determined by revenue alone, because:

Revenue is only one aspect of value, and it may not reflect the true impact or benefit of the product for the stakeholders, the users, and the society. For example, a product may generate high revenue, but also cause environmental damage, ethical issues, or customer dissatisfaction.

Value is a subjective and relative concept, and it may vary depending on the context, the perspective, and the criteria of the evaluation. For example, a product may have different value for different segments of customers, or for different markets or regions. Value is dynamic and emergent, and it may change over time due to various factors, such as feedback, competition, innovation, or regulation. For example, a product may lose its value as new alternatives or solutions become available, or as customer needs or preferences evolve.

References:

Scrum Guide 2020, page 6: "The Product Owner is accountable for maximizing the value of the product resulting from the work of the Scrum Team." Scrum Guide 2020, page 11: "The Product Goal describes a future state of the product which can serve as a target for the Scrum Team to plan against." Scrum Guide 2020, page 11: "The Product Owner is accountable for effective Product Backlog management, which includes ... optimizing the value of the work the Scrum Team performs."

NEW QUESTION # 139

Five new Scrum Teams have been created to build one product. A few of the Developers on one of the Scrum Teams ask the

Scrum Master how to coordinate their work with the other teams. What should the Scrum Master do?
(choose the best answer)

- A. Teach the Product Owner to work with the lead developers on ordering Product Backlog in a way to avoid too much overlap during a Sprint.
- B. Visit the five teams each day to inspect that their Sprint Backlogs are aligned.
- **C. Teach them that it is their responsibility to work with the other teams to create an integrated Increment that is inclusive of all five team's work.**
- D. Collect the Sprint tasks from the teams at the end of their Sprint Planning and merge that into a consolidated plan for the entire Sprint.

Answer: C

Explanation:

answer: A. Teach them that it is their responsibility to work with the other teams to create an integrated Increment that is inclusive of all five team's work.

Explanation: According to the Scrum Guide, the Scrum Team is responsible for all product-related activities, including coordination and integration with other teams. The Scrum Master should teach the Developers how to work with the other teams to create a potentially releasable product increment that meets the Definition of Done and the Product Goal. One way to facilitate this coordination is to use a Scrum of Scrums meeting, which is a daily or periodic meeting where representatives from each team share their progress, plans, and impediments. The Scrum of Scrums meeting is not mandatory, but it can help the teams align their work and resolve dependencies.

The other options are not correct because they violate the principles of Scrum, such as self-management, empiricism, and transparency:

* B. Collecting the Sprint tasks from the teams and merging them into a consolidated plan for the entire Sprint is a centralized and controlled way of coordination that undermines the self-management and autonomy of the teams. The Scrum Master should not act as a project manager or a coordinator, but as a servant-leader and a coach who enables the teams to manage their own work.

* C. Visiting the five teams each day to inspect that their Sprint Backlogs are aligned is a micromangement and inspection approach that does not respect the trust and transparency of the teams.

The Scrum Master should not interfere with the work of the teams, but support them in creating a shared understanding of the product vision, goals, and requirements.

* D. Teaching the Product Owner to work with the lead developers on ordering Product Backlog in a way to avoid too much overlap during a Sprint is a suboptimal and inefficient way of coordination that does not leverage the collective intelligence and creativity of the teams. The Product Owner should not rely on a few individuals to order the Product Backlog, but collaborate with all the teams and stakeholders to maximize value delivery.

References:

* [Scrum Guide], section 2.2: "The Scrum Team is responsible for all product-related activities from stakeholder collaboration, verification, maintenance, operation, experimentation, research and development, and anything else that might be required."

* Scrum Of Scrums - Guide to Agile Scaling Frameworks - Agilest®: "The coordination of the various teams is done in a Scrum of Scrums meeting which can be held daily, twice a week, or at a minimum, once a week. Each Scrum team has its ScrumMaster or a designated team member attend the Scrum of Scrum meeting as its representative."

NEW QUESTION # 140

What are the 3 Pillars of Scrum?

- A. Focus
- **B. Adaptation**
- **C. Transparency**
- **D. Inspection**
- E. Creativity
- F. Openness

Answer: B,C,D

NEW QUESTION # 141

What are the two primary ways a Scrum Master helps a Scrum Team work at its highest level of productivity?
(choose the best two answers)

- A. By keeping high value features high in the Product Backlog.
