If you prepare based on our Plat-Admn-202 Exam Simulations files, you will feel easy to clear exam once certainly.

Salesforce Plat-Admn-202 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• User Interface: This section of the exam measures the skills of Salesforce UI Designers and Lightning App Builders and covers the ways in which Salesforce interfaces can be customized to improve usability. It includes understanding available options for UI customization and demonstrating when to apply custom buttons, links, and actions. The domain also distinguishes between declarative and programmatic methods for incorporating Lightning components in applications, ensuring that the right approach is selected for different user interface needs.
Topic 2	<ul style="list-style-type: none">• App Deployment: This section of the exam measures the skills of Release Managers and Salesforce Administrators and covers the application lifecycle from planning through deployment. It requires determining the appropriate strategy when working with different sandboxes and managing milestones during development. Candidates must know when to use change sets and how to troubleshoot deployment issues. The section also includes understanding the implications of using unmanaged versus managed packages and selecting the correct deployment plan for various business scenarios.
Topic 3	<ul style="list-style-type: none">• Salesforce Fundamentals: This section of the exam measures the skills of Salesforce Administrators and Junior Salesforce Consultants and covers the essential concepts needed to understand how Salesforce works at a foundational level. It focuses on recognizing when to use declarative tools versus programmatic customization, determining when AppExchange apps extend org capabilities, and understanding key methods for managing object, record, and field access. It also evaluates your ability to choose the right sharing model based on business needs and to apply reporting tools effectively, including report types and dashboards. Additionally, the domain reviews how to optimize the mobile experience through actions and layouts, and how Chatter can be used to support collaboration.
Topic 4	<ul style="list-style-type: none">• Data Modeling and Management: This section of the exam measures the skills of Data Analysts and Salesforce Administrators and covers the core principles of designing and maintaining Salesforce data structures. It requires selecting the correct data model in various scenarios and understanding relationship types and how they influence reporting, record access, and the user interface. It also tests knowledge of field data types and the operational impact of changing them. The section includes evaluating the use of Schema Builder and understanding the considerations involved in importing and exporting data across internal and external sources.
Topic 5	<ul style="list-style-type: none">• Business Logic and Process Automation: This section of the exam measures the skills of Process Automation Specialists and Salesforce Administrators and covers the key tools Salesforce provides to automate and enforce business logic. It focuses on using formula fields, roll-up summary fields, and validation rules to meet defined requirements. Candidates must also understand approval processes and know how to select the right automation tool to prevent conflicts or errors. The domain emphasizes evaluating business requirements and recommending automation solutions that maintain system stability and accuracy.

Salesforce Certified Platform App Builder Sample Questions (Q199-Q204):

NEW QUESTION # 199

Universal Containers (UC) has several picklist fields on the Account object whose values are routinely modified to meet changing business requirements. Due to these revolving changes, UC has a high number of inactive picklist values that are impacting system performance and user experience.

What can the app builder do to alleviate this issue?

- A. Remove upper bound on inactive picklist values in Picklist Settings.
- B. Establish upper bound on existing picklists in Picklist Settings.
- **C. Set up Global Values in Picklist Value Sets.**
- D. Convert the picklist fields to a different field type that will still meet the business requirements.

Answer: C

Explanation:

To manage frequently changing picklist values effectively:

B . Set up Global Values in Picklist Value Sets. This approach allows for centralized management of picklist values that can be reused across multiple fields and objects. By using global value sets, inactive values can be efficiently managed and deactivated without impacting fields that use these sets.

For further information on managing picklists, check Salesforce's Picklist Management guide.

NEW QUESTION # 200

When an opportunity is closed date is pushed more than 30days, manager approval is required. An approval process is in place but reps frequently forget to submit for approval to run the process.

How can an app builder ensure that these opportunities are submitted into the approval process?

- A. Use a validation rule and an email alert to the manager requesting approval.
- B. Give the manager the "API Enabled" permission to permit approval responses by email.
- **C. Submit the record for approval from an automated process.**
- D. Change the entry criteria on the approval process to criteria are met and lock the record on initial submission.

Answer: C

Explanation:

To ensure that opportunities are submitted into the approval process when their close date is pushed more than 30 days, an app builder should use an automated process to submit the record for approval. An automated process can be created using tools such as Process Builder or Flow Builder, and it can define the criteria and actions for submitting a record for approval. [Source]

NEW QUESTION # 201

An app builder wants to create a custom object and 10 fields.

What should they use to create the object, fields, and relationships quickly from one place?

- A. Manage Field Permissions
- B. Lightning Object Creator
- C. Developer Console
- **D. Schema Builder**

Answer: D

Explanation:

To create a custom object along with multiple fields and relationships efficiently from a single interface, the Schema Builder is the ideal tool:

A . Schema Builder. This graphical tool provides a drag-and-drop interface for creating and modifying objects and fields in Salesforce, allowing for a visual layout of database schema.

Steps to use Schema Builder:

Go to Setup → Schema Builder.

Drag the 'Object' element into the schema area to create a new custom object.

Define the object's properties (e.g., label, API name).

Drag field elements like Text, Number, or Lookup into the object to create fields.

Configure each field's properties according to your requirements.

Connect objects via lookup or master-detail relationships by dragging the relationship fields between them.

Save the layout to create all elements in Salesforce.

For more information, review Salesforce's Schema Builder documentation.

NEW QUESTION # 202

The Recruiting team at AW Computing captures the job acceptance and date of hire of a candidate on the Job Application custom object. Once the candidate accepts the recruiter's job offer, the date of hire should be entered and not be changed on subsequent record edit.

Which validation formula should the app builder use?

- **A. NOT(ISBLANK(Job_Accepted_c)) && ISCHANGED(Hire_Date_c)**
- B. (ISBLANK(Job_Accepted_c) && NOT(ISCHANGED(Hire_Date_c)))

- C. (ISBLANK(Job_Accepted__c) || NOT(ISCMANGED(Mire_Daie__c))
- D. NOT{IS&lANK(Job_Accepted__c) || ISCHANGED(Hire_Date__c)}

Answer: A

Explanation:

NOT(ISBLANK(Job_Accepted__c)) && ISCHANGED(Hire_Date__c) is the validation formula that the app builder should use to meet the requirement of preventing changes to Hire Date after Job Accepted is entered. This formula will return TRUE if Job Accepted is not blank and Hire Date is changed, which will display an error message and prevent saving the record. The other formulas are not correct or valid.

NEW QUESTION # 203

Ursa Major Solar wants to provide sales console users with an Incredible experience, with the most-used components easily accessible at all times.

What solution can enable reps to see and access these components from anywhere within the app without leaving the pages where the team is working?

- A. Home page
- B. Global actions
- C. Favorites
- **D. Utility bar**

Answer: D

Explanation:

The best solution to enable reps to see and access the most-used components from anywhere within the app without leaving the page they are working on is Utility bar. This is a footer that can be added to any Lightning app and can contain tools such as history, notes, or softphone. Favorites, home page, and global actions are not solutions that provide access to components from anywhere within the app. See [this article] for more information on Utility bar.

NEW QUESTION # 204

.....

Since the cost of signing up for the Salesforce Certified Platform App Builder Plat-Admn-202 exam dumps is considerable, your main focus should be clearing the Salesforce Certified Platform App Builder Plat-Admn-202 exam on your first try.
