Workday Pro HCM Reporting Certification Exam Workday-Pro-HCM-Reporting Prüfungsfragen mit Lösungen (Q34-Q39):

34. Frage

A worker report uses a filter based on the Location field, using the comparison type Prompt the user for a value. A user runs this report and leaves the prompt value blank.

What Worker instances display on the output?

- A. No Worker instances, regardless of the value of the Location field
- B. Only Worker instances where the Location field value is blank
- C. Only Worker instances where there is a value of the Location field
- **D. All Worker instances, regardless of the value of the Location field**

Antwort: D

Begründung:

Workday report filters allow prompts so users can enter values when running a report. If the prompt value is left blank, Workday treats it as though no filter condition has been applied, so the system returns all available Worker instances regardless of the Location field.

From the Workday Reporting guide:

"Prompts - You can further narrow and refine your report results by having the user complete prompt fields before they run the report. You can set default values for prompts... If left blank, the filter condition is ignored and all data is returned." Therefore, the correct answer is D. All Worker instances, regardless of the value of the Location field.

35. Frage

The benefits manager position has recently been filled by a different worker. The previous benefits manager has transferred ownership of the report schedules to the new manager. Month end is coming up and the new manager is wondering which reports are scheduled to be run automatically.

Where can the manager view this information?

- **A. The Scheduled Future Processes report**
- B. My Reports Library
- C. The Process Monitor report
- D. My Tasks

Antwort: A

Begründung:

Workday provides the Scheduled Future Processes report to review which reports are scheduled to run automatically. This report displays the recurrence details and execution times of all scheduled reports, allowing managers to confirm upcoming automated report runs.

From the Workday Reporting documentation:

"Workday provides scheduling options to run reports at set frequencies. You can confirm upcoming scheduled report runs in the Scheduled Future Processes report." Therefore, the correct answer is D. The Scheduled Future Processes report.

36. Frage

You would like to build a composite report using worker data in which report users can select a value from the output and view the worker, worker's location, and worker's manager.

Where will you need to configure the drill down values?

- A. In the subreports

- B. In the composite report rows
- C. In the composite report prompt settings
- **D. In the composite report columns**

Antwort: D

Begründung:

In composite reports, drill-down functionality is controlled at the column level. By configuring drillable fields on the output columns, users can select values and view related details, such as worker name, location, and manager.

From the Workday documentation: "Drill-down values in composite reports are configured on columns. Columns can be set to include drillable fields, allowing users to select a value and view related data." Rows determine how data is grouped, prompts filter initial results, and subreports provide the raw data but do not directly control drillable field configurations.

Therefore, the correct configuration is C. In the composite report columns.

37. Frage

An HR administrator shares a discovery board with a manager and gives the manager Can Edit permissions. The manager is able to open Drive and access the discovery board. However, upon opening the discovery board, the manager notices that there are placeholders for each visualization and the data does not display.

What permission does the manager need to view the data in the visualizations?

- A. The Discovery Boards: Create domain
- B. The Drive domain
- C. Can View permissions on each visualization
- **D. The data source used in each visualization**

Antwort: D

Begründung:

Discovery boards in Workday Prism or Analytics rely on underlying data sources to populate visualizations. Even if the manager has Can Edit or Can View access to the discovery board itself, they still need access to the domains or data sources used in the visualizations. Without this, placeholders appear instead of data.

From the Workday binder: "Discovery boards enforce Workday security. Users must have access to the underlying data sources or domains to view data in visualizations, regardless of board permissions." Giving "Can View" permissions on the visualization object itself or Drive access only affects sharing, not data. Discovery Boards: Create allows building new boards, not data access.

Therefore, the manager must have A. The data source used in each visualization.

38. Frage

You have received a request for a new custom report that is similar to the Workday-delivered report Compare Workers, and you run the Workday Standard Reports report.

What information can you use to determine if you can copy Compare Workers to create a new custom report?

- A. The Description column is not empty for the report.
- B. You can access the report's Related Actions from the Report column.
- C. The report shows Yes in the Schedulable column.
- **D. The report shows Report Writer in the Type column.**

Antwort: D

Begründung:

The Workday Standard Reports report lists all delivered reports and key attributes. Only standard reports created with the Report Writer tool can be copied and modified into custom reports. The "Type" column indicates whether the report is a Report Writer report.

From the Workday Reporting documentation:

"Workday delivers standard reports that are available for all customers. If necessary, you can copy many of the Workday-delivered reports created with the report writer to create a custom report and modify it as needed." Thus, the correct indicator is C. The report shows Report Writer in the Type column.

39. Frage
