## WGU: Managing Cloud Security Questions with Answers 2025

Infrastructure as a service (iaas) - correct answers- allows the customer to install all software, including operating systems (oss) on hardware housed and connected by the cloud vendor.

Platform as a service (paas) - correct answers- contains everything included in iaas, with the addition of oss. this model is especially useful for software development operations (devops).

Software as a service (saas) - correct answers- includes everything listed in the previous infrastructure as a service (iaas) and platform as a service (paas) models, with the addition of software programs.

Encryption - correct answers- offers a degree of assurance that nobody without authorization will be able to access your data in a meaningful way.

Cloud service provider (CSP) - correct answers- provides administrative assistance for the customer and the customer's data and processing needs. examples include amazon web services, rackspace, and microsoft's azure.

Virtualization - correct answers- a process of creating a virtual version of something, including virtual computer hardware platforms, operating systems, storage devices, and computer network resources.

Vendor lock-in - correct answers- occurs in a situation where a customer may be unable to leave, migrate, or transfer to an alternate provider due to technical or non-technical constraints.

Cloud provider - correct answers- a service provider that offers customer storage or software solutions available via a public network, usually the internet.

Cloud portability - correct answers- the ability to move applications and associated data between one cloud provider and another, or between legacy and cloud environments.

Cloud access security broker (CASB) - correct answers-a third-party entity offering independent identity and access management (IAM) services to csp and cloud customers, often as an intermediary.

We use what to determine the critical paths, processes, and assets of an organization? - correct answers- BIA (the business impact analysis is designed to ascertain the value of the organization's assets, and learn the critical paths and processes.)

If a cloud customer wants a bare-bones environment in which to replicate their own enterprise for bc/dr purposes, which cloud service model would probably be best? - correct answers-iaas - iaas offers what is basically a hot/warm dr site, with hardware, connectivity, and utilities, allowing the customer to build out any kind of software configuration (including choosing oss).

Our specialists check daily to find whether there is an update on the Managing-Cloud-Security study tool. If there is an update system, we will automatically send it to you. Therefore, we can guarantee that our Managing-Cloud-Security test torrent has the latest knowledge and keep up with the pace of change. Many people are worried about electronic viruses of online shopping. But you don't have to worry about our products. Our Managing-Cloud-Security Exam Materials are absolutely safe and virus-free. If you encounter installation problems, we have professional IT staff to provide you with remote online guidance. We always put your needs in the first place.

If you can own the Managing-Cloud-Security certification means that you can do the job well in the area so you can get easy and quick promotion. The latest Managing-Cloud-Security quiz torrent can directly lead you to the success of your career. Our materials can simulate real operation exam atmosphere and simulate exams. The download and install set no limits for the amount of the computers and the persons who use Managing-Cloud-Security Test Prep. So we provide the best service for you as you can choose the most suitable learning methods to master the Managing-Cloud-Security exam torrent. Believe us and buy our Managing-Cloud-Security exam questions.

The clients only need 20-30 hours to learn the Managing-Cloud-Security exam questions and prepare for the test. Many people may complain that we have to prepare for the test but on the other side they have to spend most of their time on their most important things such as their jobs, learning and families. But if you buy our Managing-Cloud-Security Study Guide you can both do your most important thing well and pass the Managing-Cloud-Security test easily because the preparation for the test costs you little time and energy.

### WGU Managing Cloud Security (JY02) Sample Questions (Q75-Q80):

#### NEW QUESTION # 75

Which document, commonly existing in an IT enterprise, can be used to speed up the process of identifying a potential cloud service provider (CSP)?

- A. Entity relationship and data flow diagrams
- B. Physical plant blueprint
- C. Business continuity and disaster recovery plan
- D. Egress safety design

#### Answer: A

Explanation:

Entity relationship and data flow diagrams can significantly speed up the process of identifying a suitable cloud service provider. Managing Cloud guidance explains that these diagrams document how applications, systems, and data interact across the enterprise. By understanding data sensitivity, integration points, trust boundaries, and workloads, organizations can quickly determine which cloud service models, security controls, and compliance capabilities are required from a CSP. This enables efficient evaluation and comparison of providers.

Physical plant blueprints and egress safety designs are facilities-related documents, while BCDR plans focus on recovery strategies rather than provider selection. Therefore, entity relationship and data flow diagrams are the most useful documents for accelerating CSP identification.

#### NEW QUESTION # 76

Which tool provides a dedicated environment to contain and analyze malware?

- A. Controller
- B. Sandbox
- C. Encryption
- D. Gateway

#### Answer: B

Explanation:

A sandbox is a controlled, isolated environment used to safely run, observe, and analyze potentially malicious code. In cybersecurity, sandboxes allow analysts to execute malware samples without risking contamination of production systems. This enables identification of malware behavior, persistence techniques, and indicators of compromise.

Encryption protects confidentiality, but does not allow safe execution. Gateways control traffic flow, and controllers manage devices or workloads. Only a sandbox provides the dedicated containment required for malware analysis.

In cloud environments, sandboxing is often implemented at scale to analyze suspicious files or traffic automatically. This practice enhances defenses against zero-day exploits, advanced persistent threats, and polymorphic malware. By preventing malware from escaping, sandboxes provide essential forensic and detection insights without endangering the wider environment.

#### NEW QUESTION # 77

Which aspect of access management safeguards data by determining the user's rights to a certain resource?

- A. Centralization
- B. Authentication
- C. Provisioning
- D. **Authorization**

**Answer: D**

Explanation:

Authorization is the access management aspect that safeguards data by determining a user's rights to specific resources. Managing Cloud principles describe authorization as the process of enforcing policies that define what actions an authenticated user is permitted to perform within a system.

Once a user's identity has been authenticated, authorization evaluates roles, permissions, and access rules to decide whether access to a particular resource should be granted or denied. This ensures that users can only access data and services necessary for their job functions, reducing the risk of unauthorized data exposure.

Authentication verifies who the user is, provisioning creates the identity, and centralization relates to identity architecture design.

None of these directly determine access rights. Authorization is therefore the key mechanism that enforces least privilege and protects cloud data from improper access.

**NEW QUESTION # 78**

Which tier from Uptime Institute's Data Center Site Infrastructure Tier Standards is considered to be the most secure, reliable, and redundant in design and operational elements?

- A. Tier III
- B. Tier II
- C. Tier I
- D. **Tier IV**

**Answer: D**

Explanation:

Tier IV is the highest level in the Uptime Institute's Data Center Site Infrastructure Tier Standards and is considered the most secure, reliable, and redundant. Managing Cloud documentation explains that Tier IV data centers provide fault tolerance with multiple independent systems.

This tier includes fully redundant components, multiple active power and cooling distribution paths, and continuous operation even during maintenance or failure events. Tier IV environments are designed for mission-critical systems requiring maximum uptime.

Tier I through Tier III offer increasing levels of redundancy but do not provide full fault tolerance. Therefore, Tier IV is the correct answer.

**NEW QUESTION # 79**

Which setting ensures that an attacker cannot read the information stored temporarily for use by another virtual machine (VM)?

- A. Encrypted file system
- B. Encrypted network protocols
- C. **Dedicated memory**
- D. Dedicated processor

**Answer: C**

Explanation:

Dedicated memory allocation ensures isolation between virtual machines in a shared environment. Without memory isolation, remnants of one VM's operations might remain in physical memory and be accessible to another VM, leading to cross-tenant data leakage. Assigning dedicated memory prevents attackers from exploiting memory-sharing vulnerabilities.

Encrypted network protocols protect data in transit, not memory. Encrypted file systems safeguard storage, not volatile memory. A dedicated processor helps with performance and isolation of compute tasks but does not secure temporary memory contents.

Cloud environments are multi-tenant, which makes memory isolation a critical safeguard. By dedicating memory or enforcing strict hypervisor-level isolation, providers prevent data exposure between customers.

This aligns with best practices for virtualization security and the "resource pooling" characteristic of cloud computing, ensuring that shared infrastructure does not compromise confidentiality.
