## **CompTIA A+ Certification Exam: Core 2 Sample Questions (Q235-Q240):**

### **NEW QUESTION # 235**

A technician is attempting to join a workstation to a domain but is receiving an error message stating the domain cannot be found. However, the technician is able to ping the server and access the internet. Given the following information:

IP Address - 192.168.1.210

Subnet Mask - 255.255.255.0

Gateway - 192.168.1.1

DNS1 - 8.8.8.8

DNS2 - 1.1.1.1

Server - 192.168.1.10

Which of the following should the technician do to fix the issue?

- A. Assign a static IP address.
- B. Configure a subnet mask.
- **C. Change the DNS settings.**
- D. Update the default gateway.

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The issue described-"domain cannot be found" despite the ability to ping the server and access the internet- indicates a DNS resolution problem, not a network connectivity issue. The workstation is currently using public DNS servers (8.8.8.8 and 1.1.1.1) which cannot resolve internal domain names, such as the ones used in Active Directory environments. To resolve this, the technician needs to change the DNS settings to point to the internal DNS server, which in most domain setups is the domain controller itself (likely 192.168.1.10 in this case).

Here's the breakdown of the incorrect options:

B). Assign a static IP address: The IP is already assigned and functioning; the device can ping and reach the network and internet.

C). Configure a subnet mask: The subnet mask is appropriate for the network range (Class C /24).

D). Update the default gateway: The gateway is valid and allows internet access; this is not the issue.

CompTIA A+ 220-1102 Core 2 Objective Reference:

Objective 1.8 - Given a scenario, use features and tools of the operating system

Under this objective, candidates must know how to troubleshoot OS-based network configurations, including proper DNS settings in domain environments.

**NEW QUESTION # 236**

A support specialist must apply a new application update to an entire organization. Which of the following is the first step in this process?

- A. Peer review
- B. Backup plan
- C. Sandbox testing
- D. Request forms

**Answer: C**

Explanation:

Sandbox testing is performed first to validate the application update in a controlled environment, ensuring it functions correctly and does not introduce issues before deployment across the organization.

**NEW QUESTION # 237**

After using a third-party disk optimization software package, a technician restarts a laptop and receives the message "No operating system found." The technician verifies that the BIOS properly recognizes the SSD.

Which of the following should the technician do next?

- A. Isolate the system from the corporate network
- B. Update BitLocker settings in the BIOS
- C. Replace the CMOS battery
- D. Boot from installation media and repair the MBR

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A corrupted Master Boot Record (MBR) is a common issue after disk manipulation. Booting from installation media and using tools like bootrec to repair the MBR can resolve the problem.

Travis Everett - All-in-One Exam Guide explains:

"A damaged MBR may result in the OS not loading. Booting from recovery or installation media and selecting startup repair or running bootrec commands can restore functionality."

**NEW QUESTION # 238**

Recently, the number of users sharing smartphone passcodes has increased. The management team wants a technician to deploy a more secure screen lock method. Which of the following technologies should the technician use?

- A. Facial recognition
- B. Pattern lock
- C. Device encryption
- D. Multifactor authentication

**Answer: A**

Explanation:

Facial recognition leverages biometric characteristics unique to each user, offering stronger security than shared passcodes or easily observed pattern locks. It ensures that only the enrolled individual can unlock the device, reducing the risk of unauthorized access from shared codes.

**NEW QUESTION # 239**

A systems administrator plans to upgrade a server to the latest operating system. Which of the following should the administrator do before placing a change request?

- A. Create a test environment
- **B. Establish a scope**
- C. Get change board approval
- D. Roll back any previous changes

**Answer: B**
