- A. MLRO
- B. Chief Executive Officer
- C. Board of Directors
- D. Compliance officer

Answer: C

NEW QUESTION # 40
Which advantage of the proof of work consensus algorithm is widely applicable in many cryptocurrencies and other blockchain systems?

- A. Dependency on electricity
- B. Verification of transactions by solving complex mathematical puzzles
- C. Centralization of the consensus mechanism
- D. Security of small networks

Answer: B

Explanation:
Proof of Work (PoW) consensus achieves network consensus by requiring participants (miners) to solve complex cryptographic puzzles, which verifies transactions and secures the blockchain. This computational work makes it difficult and costly to alter the blockchain.
Dependency on electricity (A) is a criticism rather than an advantage. PoW promotes decentralization rather than centralization (B).
It provides strong security for large networks rather than small ones (D).
This principle is fundamental in Bitcoin and many other cryptocurrencies and is frequently referenced in AML/CFT guidance to understand the transaction validation process and network security.
